## DC/DC converter Input 9-36 and 18-72 Vdc Output up to 0.5 A / 3 W

## **Key Features**

- Industry standard DIL24
- Wide input voltage range, 9–36 V, 18–72 V
- High efficiency 74–83% typical
- · Low idling power
- Full output power up to +75 °C

ambient temperature

- Input/Output isolation 1,500 Vdc
- MTBF > 650,000 hours at +25°C ambient
- Functional insulation according to UL 62368-1

Safety Approvals

The PKV series of DC/DC power modules is intended for general use in 12/24 V and 48/60V DC systems. Designed with MOSFET transistors and 200 kHz switching frequency, they are characterized by high efficiency over a wide load range, very low quiescent power and an excel- lent line and load regulation.

The DC/DC power modules are encapsulated in an epoxy filled plastic box. The flammability ratings of the

Design for Environment

Meets requirements in high-temperature lead-free soldering processes.

encapsulating materials are in conformance with UL 94V-0 and have an adequate thermal conductivity. The materials withstand all normal PBA cleaning methods. Flex is an ISO 9001/14001 certified supplier.

## General

## **Absolute Maximum Ratings**

| Chara            | cteristics  | min | max | Units    |     |
|------------------|---|-----|-----|----------|-----|
| Tc               | Case temperature <sup>1)</sup>                                    | -40 | +95 | °C       |     |
| Ts               | Storage temperature   |     | -40 | +125     | °C  |
| VI               | Input voltage, 0.1 s max PKV 3000<br>PKV 5000                     |     |     | 40<br>80 | Vdc |
| V <sub>ISO</sub> | Isolation voltage <sup>2)</sup><br>(input to output test voltage) |     | 1,5 | 00       | Vdc |

Stress in excess of Absolute Maximum Ratings may cause permanent damage. Absolute Maximum Ratings, sometimes referred to as no destruction limits, are normally tested with one parameter at a time exceeding the limits of Output data or Electrical Characteristics. If exposed to stress above these limits, function and performance may degrade in an unspecified manner.

#### Note:

- 1) Corresponding typical ambient temperature range (T\_A) at full output power is -40 to  $+75^{\circ}$ C.
- 2) Typical Isolation voltage of PKV5211 module is 2,000 Vdc

**Input**  $T_A = +25^{\circ}C$ , unless otherwise specified

## Safety

The PKV 3000 I and PKV 5000 I series DC/DC converters are designed in accordance with safety standards UL 62368-1, Safety of Information Technology Equipment. The PKV 3000 I and PKV 5000 I series DC/ DC converters are UL 62368-1 recognized. The DC/DC converter should be installed in the end-use equipment, in accordance with the requirements of the ultimate application. The input source must be isolated by minimum Basic insulation from the primary circuit in accordance with UL 62368-1. If the input voltage to the DC/DC converter is 72 V dc or less, then the output remains SELV (Safety Extra Low Voltage) under normal and abnormal operating conditions.

It is recommended that a slow blow fuse with a rating of 2 x I<sub>I</sub>max be used at the input of each DC/DC converter. If a fault occurs in the converter that imposes a short circuit on the input source, this fuse will provide the following functions:

- Isolate the faulty DC/DC converter from the input power source not to affect the operation of other parts of the system.
- Protect the distribution wiring from excessive current and power loss thus preventing hazardous overheating.

The galvanic isolation is verified in an electric strength test. The test voltage ( $V_{ISO}$ ) between input and output is 1500 Vdc for 60 seconds. Leakage current is less than 1µA at nominal input voltage.

The flammability rating for all construction parts of the DC/DC converter meets UL 94V-0.

## **EMC Specifications**

The PKV DC/DC power module is mounted on a double sided printed circuit board (PB) with groundplane during EMC measurements. The fundamental switching frequency is approx. 200 kHz.

The PKV series has a good input filter and will only need a simple filter to meet conducted noise according to EN 55022 level B. Fig. 1 shows an example of filter and the results for this filter is shown below.

## **Conducted noise**

PKV 5211 without filter

MHz

PKV 3211 with filter

PKV 5211 with filter

### Miscellaneous

#### **Soldering Information**

The PKV Series DC/DC Converters are intended forthrough hole mounting in a PCB. When wave soldering is used, the temperature on the pins is specified to maximum 260 °C for maximum 10 seconds. Maximum preheat rate of 4 °C/s and temperature of max 150 °C is suggested. When hand soldering, care should be taken to avoid direct contact between the hot soldering iron tip and the pins for more than a few seconds in order to prevent overheating.

A no-clean (NC) flux is recommended to avoid entrapment of cleaning fluids in cavities inside of the DC/DC power module. The residues may affect long time reliability and isolation voltage.

#### **External Decoupling Capacitors**

When powering loads with significant dynamic current requirements, the voltage regulation at the point of load can be improved by addition of decoupling capacitors at the load. The most effective technique is to locate low ESR ceramic and electrolytic capacitors as close to the load as possible, using several parallel capacitors to lower the effective ESR. The ceramic capacitors will handle highfrequency dynamic load changes while the electrolytic capacitors are used to handle low frequency dynamic load changes. Ceramic capacitors will also reduce any high frequency noise at the load. It is equally important to use low resistance and low inductance PCB layouts and cabling.

External decoupling capacitors will become part of the control loop of the DC/DC converter and may affect the stability margins. As a "rule of thumb", 100  $\mu$ F/A of output current can be added without any additional analysis. The ESR of the capacitors is a very important parameter. Power Modules guarantee stable operation with a verified ESR value of > 10 mOhm across the output connections.

For further information please contact your local Flex representative.

## Delivery Package Information

The PKV series DC/DC converters are delivered in tubes with a lenght of 384 mm (15.1 in)

#### **Tube Specification**

| Material:               | PVC               |
|-------------------------|-------------------|
| Max surface resistance: | 10 to1000 MOhm/sq |
| Color:                  | Transparent       |
| Capacity:               | 10 pcs/tube       |
| Weight:                 | typ 160 g         |
| End stops               | Pins              |
|                         |                   |

#### Reliability

According to MIL-HDBK-217F the calculated MTBF value at 100% load (from PKV 5211 PI) at the following ambient temperatures will be approx.:

#### Tamb Hours

| 0 °C  | 2.7 million |
|-------|-------------|
| 10 °C | 1.5 million |
| 25 °C | 650 000     |
| 40 °C | 276 000     |
| 60 °C | 88 000      |
| 75 °C | 37 000      |

At 80–100% load the case temperature will be approx. 15–20 °C higher than the ambient temperature.

#### Compatibility with RoHS requirements

The products are compatible with the relevant clauses and requirements of the RoHS directive 2011/65/EU and have a maximum concentration value of 0.1% by weight in homogeneous materials for lead, mercury, hexavalent chromium, PBB and PBDE and of 0.01% by weight in homogeneous materials for cadmium.

Exemptions in the RoHS directive utilized in Flex products are found in the Statement of Compliance document.

Flex fulfills and will continuously fulfill all its obligations under regulation (EC) No 1907/2006 concerning the registration, evaluation, authorization and restriction of chemicals (REACH) as they enter into force and is through product materials declarations preparing for the obligations to communicate information on substances in the products.

## **Quality Statement**

The PKV series DC/DC converters are designed and manufactured in an industrial environment where quality systems and methods like ISO 9000 and SPC are intensively in use to boost the continuous improvements strategy. Infant mortality or early failures in the products are screened out by a burn-in procedure.

## Warranty

Warranty period and conditions are defined in Flex General Terms and Conditions of Sale.

## Limitation of liability

Flex does not make any other warranties, expressed or implied including any warranty of merchantability or fitness for a particular purpose (including, but not limited to, use in life support applications, where malfunctions of product can cause injury to a person's health or life).
