### Absolute Maximum Ratings<sup>1,2</sup>

Parameter	Absolute Maximum
Operating Temperature	-65°C to +175°C

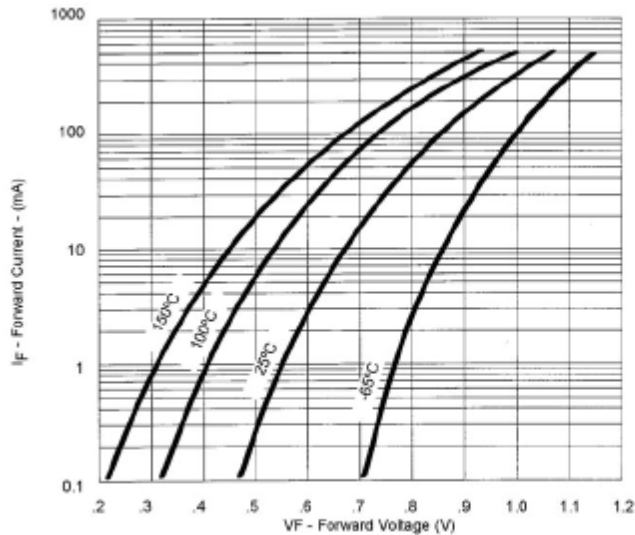

- Exceeding any one or combination of these limits may cause permanent damage to this device.
- VPT Components does not recommend sustained operation near these survivability limits.

### Handling Procedures

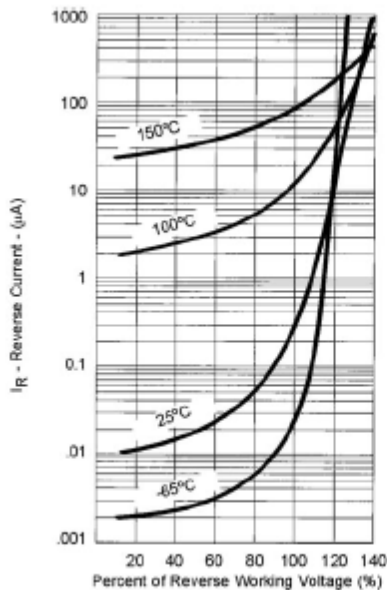

Please observe the following precautions to avoid damage:

### Static Sensitivity

These electronic devices are sensitive to electrostatic discharge (ESD) and can be damaged by static electricity. Proper ESD control techniques should be used when handling these devices.

**Note:**  
All temperatures shown on graphs are  
junction temperatures

### NOTES:

1. All devices are capable of operating at  $\leq T_J$  specified on this curve. Any parallel line to this curve will intersect the appropriate current for the desired maximum  $T_J$  allowed.
2. Derate design curve constrained by the maximum junction temperatures and current rating specified. (See 1.3.)
3. Derate design curve chosen at  $T_J \leq 150^\circ\text{C}$ , where the maximum temperature of electrical test is performed.
4. Derate design curves chosen at  $T_J \leq 125^\circ\text{C}$ , and  $110^\circ\text{C}$  to show current rating where most users want to limit  $T_J$  in their application.

$Z_{\Theta JX} = 25^{\circ}\text{C/W}$  maximum at  $t_{FH} = 10\text{ms}$

Lead spacing = .375 inch mounted to an infinite heat dissipater

#### NOTES:

1. Dimensions are in inches. Millimeters are given for general information only.
2. Dimension BD shall be measured at the largest diameter.
3. The specified lead diameter applies in the zone between .050 inch (1.27 mm) from the diode body to the end of the lead. Outside of this zone lead shall not exceed BD.
4. In accordance with ASMEY14.5M, diameters are equivalent to  $\Phi$ x symbology.
5. U-suffix parts are structurally identical to the US-suffix parts.

#### NOTES:

1. Dimensions are in inches / mm.
2. The dimensions listed will match the device terminals based on worst-case package outline drawings and assuming accuracy of device placements is within 0.005 inches. Footprints also provide for solder fillets at the outer ends of the device at least as wide as the terminals.
3. F designates recommendation to fill unused area with an extended copper pad in order to reduce the CTE difference between the device and the PC board. The extended area may be3 coated with a solder mask. the width of F depends upon your PCB design rules.
