Applications

To protect against thermal overload of motors caused by high switching frequency, heavy duty starting, phase failure on one phase, bad cooling, high ambient temperature.

Function

The motor protection relay MK 9052 is used to detect thermal overload. Special PTC-resistors are used as sensors for motor protection. Up to 6 sensors can be connected in series. When reaching a certain resistance the output relay of the MK 9052 is switched off.
An LED indicates the contact state. The motor protection relay works with open circuit operation and also detects broken wire in the sensor circuit.
