

**Key Features** 

**Type ROX Series** 

High Power with Small Size for Space Saving

**Excellent Long Term Stability** 

Complete
Flameproof
Construction

Controlled Temperature Capability

Solvent Resistant Coat and Code

Special Lead Formations Possible

The resistive element comprises a metal oxide film deposited on a ceramic former. The element is protected by a flameproof coating which will withstand overload conditions without flame or mechanical damage. They are recommended for use in applications such as line protection etc

#### **Characteristics – Electrical**

Resistors shall have a rated direct-current (DC) continuous working voltage or an approximate sine-wave root-mean-square (RMS) alternating-current (AC) continuous working voltage at commercial line frequency and waveform corresponding to the power rating , as determined from the following formula :

 $RCWV = VP \times R$ 

Where: RCWV = Rated DC or RMS AC continuous working voltage at commercial-line frequency and waveform (volt)

P = Power Rating (watt)

R = Nominal Resistance (ohm)

Rated Voltage = RCWV or Max. Working Voltage, whichever is smaller

## **Environmental Characteristics**

| Characteristics                       | Specifica   | tion   | Test Methods   |

### Painting method:

Welding point, terminal and lead wire, is permissible to be exposed without the outer coated cover. The extent should be within 1/2 of the resistor body diameter.

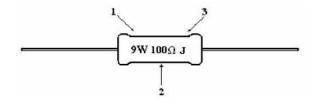

## Marking:

For 1/4W, 1/2W, 1W, 2W, 3W, 4W, 5W and all of small size Resistors shall be marked with color coding. colors shall be in accordance with JIS C 0802

For 7W, 8W, 9W marking shall be in text format:

Code description and regulation

- 1. Wattage rating.
- 2. Nominal resistance value.
- 3. Resistance Tolerance.

G: ± 2 %

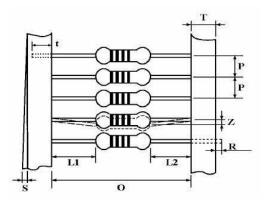

J: ± 5 %

K: ± 10 %
