

BHA260

Ultra-low power and high-performance smart sensor hub with integrated accelerometer

GENERAL DESCRIPTION

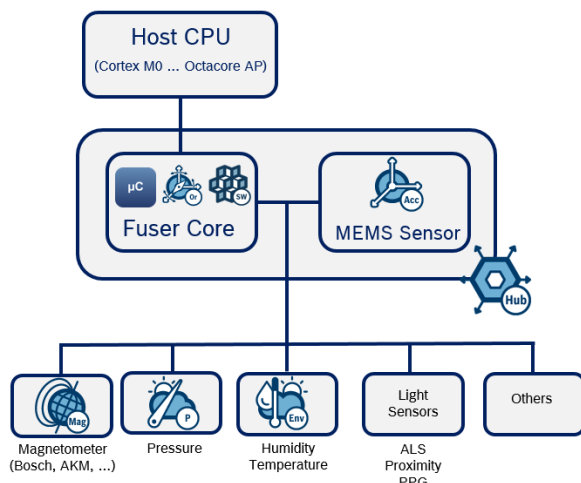

The BHA260 is a family of ultra-low power smart hubs consisting of Bosch Sensortec's new, programmable 32-bit microcontroller (Fuser2), a state-of-the-art 3-axis accelerometer and a powerful software framework containing pre-installed sensor fusion and other sensor processing software within a small 22 pad LGA package.

The Fuser2 Core is configurable to operate at 20 MHz (Long Run mode) and 50 MHz (Turbo mode). It can boot from a wide variety of hosts, ranging from a small Cortex-M0™ MCU up to multicore application processors. In combination with its wide connectivity and extensibility, the BHA260 becomes a versatile and ideal solution when it comes to always-on sensor processing at ultra-low power consumption.
