

SNS-TMP10K

Temperature sensor with NTC Preciese Thermistor 10K 1% B=3435

Temperature sensor for temperatures in range -30+110C with 1% precision.
Perfect for measuring of fluids, air temperature, refrigrators, freezers, water heaters, incubators etc.

The resistance is 10K +-1% at 25C. The resistance goes down when warmer and up when colder.

FEATURES

- NTC 10K 1% B=3435
- Thermal time constant 15 seconds
- metal encapsulated with epoxy fill
- 25 x 5 mm metal capsule
- 60 cm cable
- JST 2mm step connector

SOFTWARE

- [Arduino code for temperature measurement with SNS-TMP10K](#)
