

## LTC2974 Quad Digital Power Supply Manager with EEPROM

### DESCRIPTION

The DC1978A is a demonstration system for the LTC<sup>®</sup>2974 quad I<sup>2</sup>C/SMBus/PMBus power supply monitor and controller with EEPROM. The DC1978A demonstrates the ability of the LTC2974 to monitor, supervise, sequence, trim, margin and log faults for four power supplies. Each power supply channel of the LTC2974 monitors current, voltage and temperature. This demonstration system is supported by the LTpowerPlay<sup>™</sup> graphical user interface (GUI) that enables complete control of all LTC2974 features.

The DC1978A consists of two circuit boards designed to work as a pair, DC1809A and DC1810A. The DC1809A contains all the circuitry needed to insert the LTC2974 into a power system and control four power supplies. The DC1810A contains four power supplies, two LTC3860 DrMOS supplies and two LTM<sup>®</sup>4620 supplies, which are configured to be controlled by the LTC2974. Together, these two boards form a sophisticated four-channel digitally programmable power supply.

Together, the LTpowerPlay software and DC1978A hardware system create a powerful development environment for designing and testing LTC2974 configuration settings. These settings can be stored in the LTC2974 internal EEPROM or in a file. This file can later be used to order preprogrammed devices or to program devices in a production environment. The LTpowerPlay software displays all of the configuration settings and real time measurements from the LTC2974. Telemetry allows easy access and decoding of the fault log created by the LTC2974. The LTC2974 on the DC1809A board comes preprogrammed with the EEPROM values appropriate for the four power supplies used on the DC1810A. Just plug and play!

Multiple DC1978A board sets can be cascaded together to form a high channel count power supply (see Multiboard Arrays). This cascaded configuration demonstrates features of the LTC2974 which enable timing and fault information to be shared across multiple LTC2974s allowing for the formation of a single, coherent power supply control system. This cascaded configuration is supported

by the LTpowerPlay GUI and allows the user to configure up to nine LTC2974s, thereby controlling up to 36 separate power supplies. Larger arrays (>9) of LTC2974s are supported through programmable I<sup>2</sup>C base address or bus segmentation.

The DC1809A/DC1810A boards are powered by an external 12V power supply. Communication with the LTpowerPlay software is via the DC1613 USB to I<sup>2</sup>C/SMBus/PMBus controller. The following is a checklist of items which can be obtained from the LTC website or LTC Field Sales.

- USB to I<sup>2</sup>C/PMBus Controller (DC1613)
- LTpowerPlay Software
- Configuration File (.proj file) for the DC1978A

**Design files for this circuit board are available at <http://www.linear.com/demo>**

#### LTC2974 Features

- I<sup>2</sup>C/SMBus Serial Interface
- PMBus Compliant Command Set
- Configuration EEPROM with CRC
- Black Box Fault Logging to Internal EEPROM
- Differential Input, 16-Bit  $\Delta\Sigma$  ADC with Less Than  $\pm 0.25\%$  of Total Unadjusted Error
- Four Voltage Servos Precisely Adjust Supply Voltages Using 10-Bit DACs with Soft Connect
- Monitors Four Output Voltages, Four Output Currents and One Input Voltage
- Monitors Four External Temperature Sensors and Internal Die Temperature
- 4-Channel Sequencer, Time Based or Tracking
- Programmable Watchdog Timer

LT, LT, LTC, LTM,  $\mu$ Module, PolyPhase, Linear Technology and the Linear logo are registered trademarks and LTpowerPlay is a trademark of Linear Technology Corporation. All other trademarks are the property of their respective owners. Protected by U.S. Patents Including 7382303 and 7420359.

# DEMO MANUAL DC1978A

## DESCRIPTION

- Four OV/UV  $V_{OUT}$  and One  $V_{IN}$  Supervisor
- Four Overcurrent/Undercurrent Supervisors
- Supports Multichannel Fault Management
- Operates Autonomously without Additional Software
- Powered from 3.3V or 4.5V to 15V
- Available in 64-Lead 9mm × 9mm QFN

## PERFORMANCE SUMMARY Specifications valid over full operating temperature range.

PARAMETER	CONDITIONS	MIN	TYP	MAX	UNITS
$V_{PWR}$ Supply Input Voltage Range		4.5		15	V

## LTpowerPlay GUI SOFTWARE

LTpowerPlay is a powerful Windows based development environment that supports Linear Technology digital power ICs with EEPROM, including the LTC2974 and LTC2978 quad and octal PMBus power supply managers, and the LTC3880 dual output PolyPhase® step-down DC/DC controller with digital power system management. The software supports a variety of different tasks. You can use LTpowerPlay to evaluate Linear Technology ICs by connecting to a demo board system. LTpowerPlay can also be used in an offline mode (with no hardware present) in order to build a multichip configuration file that can be saved and reloaded at a later time. LTpowerPlay provides unprecedented diagnostic and debug features. It becomes a valuable diagnostic tool during board bring up

to program or tweak the power management scheme in a system or to diagnose power issues when bringing up rails. LTpowerPlay utilizes the DC1613A USB-to-SMBus controller to communicate with one of many potential targets, including the LTC2974's DC1978A demo system or a customer board. The software also provides an automatic update feature to keep the software current with the latest set of device drivers and documentation. The LTpowerPlay software can be downloaded from:

<http://linear.com/ltpowerplay>

To access technical support documents for LTC Digital Power Products visit Help, View Online *help* on the LTpowerPlay menu.

Figure 1. Interface of the LTpowerPlay GUI

DC1978a F01

# DEMO MANUAL DC1978A

## QUICK START PROCEDURE

The following procedure describes how to set up a DC1978A demo system.

1. Download and install the LTpowerPlay GUI:  
<http://linear.com/ltpowerplay>
2. Remove both boards from the ESD protective bags and place them on a level surface. Connect the boards together using the 50-pin edge connector. Be especially careful not to misalign the connectors. Connect the DC1613 I<sup>2</sup>C/SMBus/PMBus controller to the DC1809A board.
3. Confirm that all jumpers and switches on DC1809A are set to their defaults as follows:
  - a. Set both JP1 and JP2 (Address select ASEL0 and ASEL1) to LOW to select I<sup>2</sup>C address 0x5C.
  - b. Set JP3 (WRITE PROTECT) to OFF to enable writing to the LTC2974 EEPROM.
  - c. Set the control jumpers JP4 to JP7 to SW0 to SW3 position to connect the switches to the LTC2974 control pins.
  - d. Set all control switches SW0, SW1, SW2 and SW3 to HI.
4. Confirm that all jumpers and switches on DC1810A are set to their defaults as follows.
  - a. Set JP1, JP2 and JP3 to SOFT-START to enable independent startup of CH1, CH2 and CH3.
  - b. Set the preload switches SW1, SW2, SW3 and SW4 to ON.
5. Plug the USB to I<sup>2</sup>C/SMBus/PMBus Controller into a USB port on your PC.
6. Connect a 12V power supply with > 0.5A capacity to the V<sub>IN</sub> input of the DC1810A. The board should power up and all power good outputs should be illuminated green.
7. Launch the LTpowerPlay GUI.
  - a. The GUI should automatically identify the LTC2974. The system tree on the left hand side should look like this:

DC1978a F02

Figure 2. Connecting DC1809A/DC1810A Boards and the DC1613 I<sup>2</sup>C/SMBus/PMBus Controller

dc1978af

## QUICK START PROCEDURE

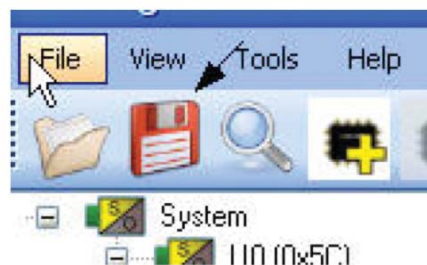

- b. A green message box shows for a few seconds in the lower left hand corner, confirming that the LTC2974 is communicating:

- c. In the Toolbar, click the R icon to read the RAM from the LTC2974. This reads the configuration from the RAM of LTC2974 and loads it into the GUI.

- d. Save the demo board configuration to a (\*.proj) file. Click the Save icon and save the file. Name it whatever you want.

8. The control switches SW0 to SW3 are configured to control channels CH0 to CH3. Slide the switches to HI/GND to enable/disable the individual channels.

9. You are now ready to view one of the LTC2974 demo videos embedded in the LTpowerPlay GUI or experiment with the part on your own. To view a video or more LTC2974 information and application notes, visit the LTpowerPlay online help website from the GUI as shown here:

## LOADING A LTC2974 CONFIGURATION (\*.proj) FILE WITH THE GUI

1. In the upper left hand corner of the GUI, File > Open > browse to your \*.proj file. This will load the file into the GUI.

2. Click on the  arrow. This loads the configuration into LTC2974 RAM.
3. To store the configuration in EEPROM, click on the STORE button. It is the button on the left below.

# DEMO MANUAL DC1978A

## DC1978A DETAILS TOP SIDE

DC1978a F03

Figure 3. DC1978A Top Details

## COMMON DEMO BOARD OPERATIONS

### SELECTING I<sup>2</sup>C ADDRESS

The I<sup>2</sup>C/SMBus address of the LTC2974 equals the base address + N, where N is a number from 0 to 8. N can be configured by setting the ASEL0 and ASEL1 pins to V<sub>DD33</sub>, GND or FLOAT. See Table 3. Using one base address and the nine values of N, nine LTC2974s can be connected together to control thirty six outputs. The base address is stored in the MFR\_I2C\_BASE\_ADDRESS register. The base address can be written to any value, but generally should not be changed unless the desired range of addresses overlap existing addresses. Watch that the address range does not overlap with other I<sup>2</sup>C/SMBus device or global addresses, including I<sup>2</sup>C/SMBus multiplexers and bus buffers.

### RESET THE LTC2974

To reset the LTC2974 and reload the EEPROM contents into operating memory (RAM), press SW4 on DC1809A.

### DC1978A LEDS

The red LEDs on ALERTB, FAULTB0, FAULTB1 and AUX-FAULTB (D3, D4, D5, D2) indicate a fault has occurred. The green LED (D6) next to them is the LTC2974 PWRGD signal. Each individual channel on DC1810A also has its own green PWR GOOD LED (PG0, PG1, PG2, PG3). When the USB to I<sup>2</sup>C/SMBus/PMBus controller power or external power is applied, the green LED D1 will illuminate, indicating that the LTC2974 is powered.

### FAULTING AN OUTPUT

The outputs of the power supplies CH0 to CH3 may be shorted indefinitely. This is a good way to induce UV faults. Use a jumper wire or a coin to short any output.

Table 3. Device Address Lookup Table

ADDRESS DESCRIPTION	HEX DEVICE ADDRESS		BINARY DEVICE ADDRESS BITS								ADDRESS PINS	
	7-Bit	8-Bit	6	5	4	3	2	1	0	R/W	ASEL1	ASEL0

## COMMON DEMO BOARD OPERATIONS

### FAULT SHARING SETUP IN THE GUI

Use the fault sharing setup tool to configure the fault sharing in the GUI. Before doing so, view the fault sharing demo in the GUI. Go to Tools > Fault Sharing Diagram. Also, read the section on fault sharing in the data sheet.

### “WHY AM I OFF?” TOOL

Use the “Why am I Off?” tool in the LTpowerPlay GUI to diagnose the reason a power supply channel is turned off. The tool can be located in the top right corner of the GUI, next to the Register Information tab.

### TRACKING BASED SEQUENCING

The LTC2974 supports tracking power supplies that are equipped with a tracking pin and configured for tracking. A tracking power supply uses a secondary feedback terminal (TRACK) to allow its output voltage to be scaled to an external master voltage. Typically, the external voltage is generated by the supply with the highest voltage in the system, which is fed to the slave track pins (see Figure 6). Any supplies that track a master supply must be enabled before the master supply comes up and disabled after the master supply comes down. Enabling the slave supplies

**Why am I Off? Summary**

Rail 'U0:0' is commanded off by the user.

**Details:**

Rail 'U0:0' is commanded off via the OPERATION command.

- The OPERATION command is presently ImmediateOff (0x00).
- Rail 'U0:0' is configured to respect the OPERATION command via ON\_OFF\_CONFIG.

NOTE: This is an early prototype of the analysis tool and it only presents a partial analysis of your configuration settings and device status. A number of other possibilities not mentioned here may be causing your output to be off. Consult the list below for further troubleshooting.

Figure 5. “Why am I Off?” tool in the LTpowerPlay GUI

## COMMON DEMO BOARD OPERATIONS

Slave channel n

- $TON\_DELAY = Ton\_delay\_slave$
- $TON\_RISE = Ton\_delay\_master + Ton\_rise\_slave$
- $TOFF\_DELAY = Toff\_delay\_master + T\_off\_delay\_slave$
- $Mfr\_track\_en\_chan0 = 1$

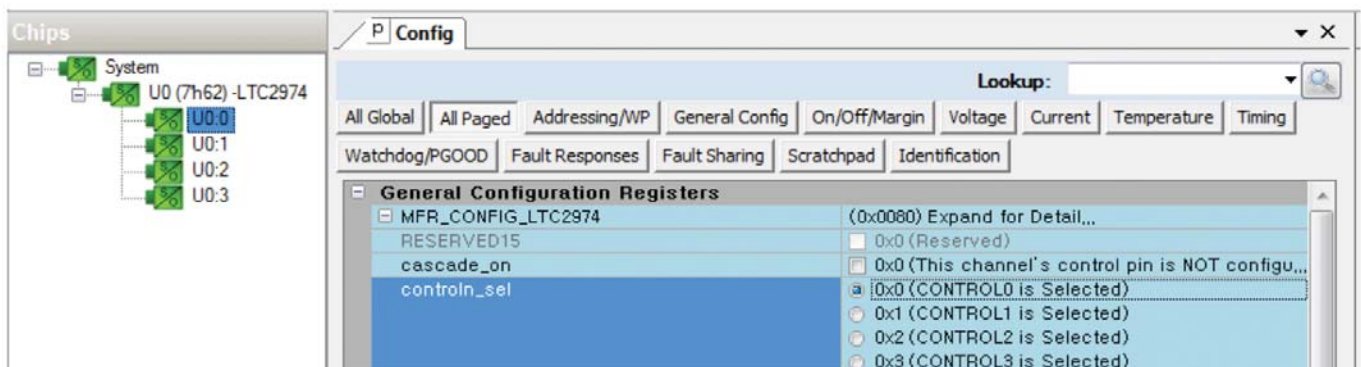

Where:

$Ton\_delay\_master - Ton\_delay\_slave > RUN$  to TRACK setup time

$Toff\_delay\_slave > time$  for master supply to fall.

### PROCEDURE TO DEMONSTRATE TRACKING WITH DC1978A

1. Start with the default LTC2974 EEPROM and jumper settings for DC1978A. Set the jumpers JP1, JP2 and JP3 to TRACK CH0 position. This connects the TRACK pins of the slave supply channels to the output voltage of the master channel through resistive dividers (see Figure 6).
2. Set DC1809A jumper JP4 to SW0 position to propagate the CONTROL0 switch to the CONTROL0 pin of LTC2974.
3. Set the preload (100mA) of CH0 (SW1 to ON) and the preloads of the slave channels CH1 to CH3 to OFF (SW2 to SW4 to OFF). The absence of load for the slave channels makes improper sequencing down behavior more obvious.
4. Configure all power supplies to respond to CONTROL0, by setting the appropriate bit in the paged MFR\_CONFIG register. In this case U0:0, U0:1, U0:2 and U0:3 are all controlled by CONTROL0.

dc1978af

## COMMON DEMO BOARD OPERATIONS

5. Set the TON\_DELAY of all slaves (CH1, CH2 and CH3) to 0ms and the TON\_DELAY for the master channel to 20ms.

[4 rails] TON_DELAY	
<b>TON_DELAY (All Pages in System)</b>	
U0:0 - LTC2974	20,000 ms
U0:1	0,000 ms
U0:2	0,000 ms
U0:3	0,000 ms

6. Set the TOFF\_DELAY of all slaves (CH1, CH2 and CH3) to 20ms and the TOFF\_DELAY for the master channel to 0ms.

[4 rails] TOFF_DELAY	
<b>TOFF_DELAY (All Pages in System)</b>	
U0:0 - LTC2974	0,000 ms
U0:1	20,000 ms
U0:2	20,000 ms
U0:3	20,000 ms

7. Set the TON\_RISE of all slaves (CH1, CH2 and CH3) to 30ms and the TON\_RISE for the master channel to 10ms.

[4 rails] TON_RISE	
<b>TON_RISE (All Pages in System)</b>	
U0:0 - LTC2974	10,000 ms
U0:1	30,000 ms
U0:2	30,000 ms
U0:3	30,000 ms

## COMMON DEMO BOARD OPERATIONS

- Set the track\_en\_chan1, track\_en\_chan2 and track\_en\_chan3 bits in MFR\_CONFIG3 to 1.

MFR_CONFIG3_LTC2974	(0x0E) track_en_chan3, track_en_chan2, track_en_chan1
chan3_uc	<input type="checkbox"/> 0x0 (No Action on IOUT_UC)
chan2_uc	<input type="checkbox"/> 0x0 (No Action on IOUT_UC)
chan1_uc	<input type="checkbox"/> 0x0 (No Action on IOUT_UC)
chan0_uc	<input type="checkbox"/> 0x0 (No Action on IOUT_UC)
track_en_chan3	<input checked="" type="checkbox"/> 0x1 (Channel is a slave in a tracked power supply system)
track_en_chan2	<input checked="" type="checkbox"/> 0x1 (Channel is a slave in a tracked power supply system)
track_en_chan1	<input checked="" type="checkbox"/> 0x1 (Channel is a slave in a tracked power supply system)
track_en_chan0	<input type="checkbox"/> 0x0 (Channel is NOT a slave in a tracked power supply system)

- Toggle the CONTROL0 switch and observe the synchronized tracking behavior of the power supplies.

Figure 7. Tracking Supplies Up with DC1978A

Figure 8. Tracking Supplies Down with DC1978A

## COMMON DEMO BOARD OPERATIONS

### PROCEDURE TO DEMONSTRATE CASCADE SEQUENCING WITH DC1978A

1. Start with the default LTC2974 EEPROM and jumper settings for DC1978A. Set the DC1809A power good cascading jumpers JP4, JP5, JP6 and JP7 to SW0, PG\_0, PG\_1, PG\_2 positions. This connects the power good and control pins as shown in Figure 9.
2. Enable all output supply preloads on DC1810A by sliding the DC1810A switches SW1, SW2, SW3 and SW4 to ON position.
3. Set the TON\_DELAY of all channels to 0ms

TON_DELAY (All Pages in System)	
U0:0 - LTC2974	0,000 ms
U0:1	0,000 ms
U0:2	0,000 ms
U0:3	0,000 ms

4. Set the TOFF\_DELAY for the inverse shutdown sequence.

TOFF_DELAY (All Pages in System)	
U0:0 - LTC2974	30,000 ms
U0:1	20,000 ms
U0:2	10,000 ms
U0:3	0,000 ms

## COMMON DEMO BOARD OPERATIONS

- Set the cascade\_on bit in MFR\_CONFIG register for CH1, CH2 and CH3. The master channel has this bit cleared.

- Use Group Operation On to power up all supplies

## COMMON DEMO BOARD OPERATIONS

7. Use Group Operation “Sequence Off” to power down all supplies

8. The power supplies cascade ON/OFF as shown in Figures 10 and 11 below.

Figure 10. Cascade Sequencing Up with DC1978A

Figure 11. Time Based Sequencing Down with DC1978A

## SETUP PROCEDURE FOR MULTIBOARD ARRAYS

Multiple DC1978As can be combined to control up to 36 independent power supplies. This demonstrates the coordinated fault responses and accurate time base shared across multiple LTC2974 chips.

### Procedure:

1. Stack the boards together by plugging J1 of the second DC1809A board into J3 of the first DC1809A board.
2. Connect the 12V  $V_{IN}$  across the boards using the banana cables as shown in Figure 12 below. Preserve the correct polarity (connect  $V_{IN}$  to  $V_{IN}$  and GND to GND).
3. The USB to I<sup>2</sup>C/SMBus/PMBus controller may be plugged into either board. If both LTC2974s do not show up in the GUI, click the hourglass icon to enumerate
4. The addresses of the LTC2974 are set by the jumpers JP1 and JP2 on DC1809A and the settings have to be unique for each board in the array.
5. Since the individual control lines are connected across the boards (CONTRLO is a common bus across all boards in the array, as are CONTROL1 CONTROL2 and CONTROL3), make sure that all control pins on all DC1809A boards are set to the selected active state.
6. Relaunch LTpowerPlay. After launching, LTpowerPlay will enumerate the entire board array and build a representative system tree and read all hardware settings into the GUI.

Figure 12. Array of Multiple DC1978A Demo Boards

## DC1809A DETAILS TOP

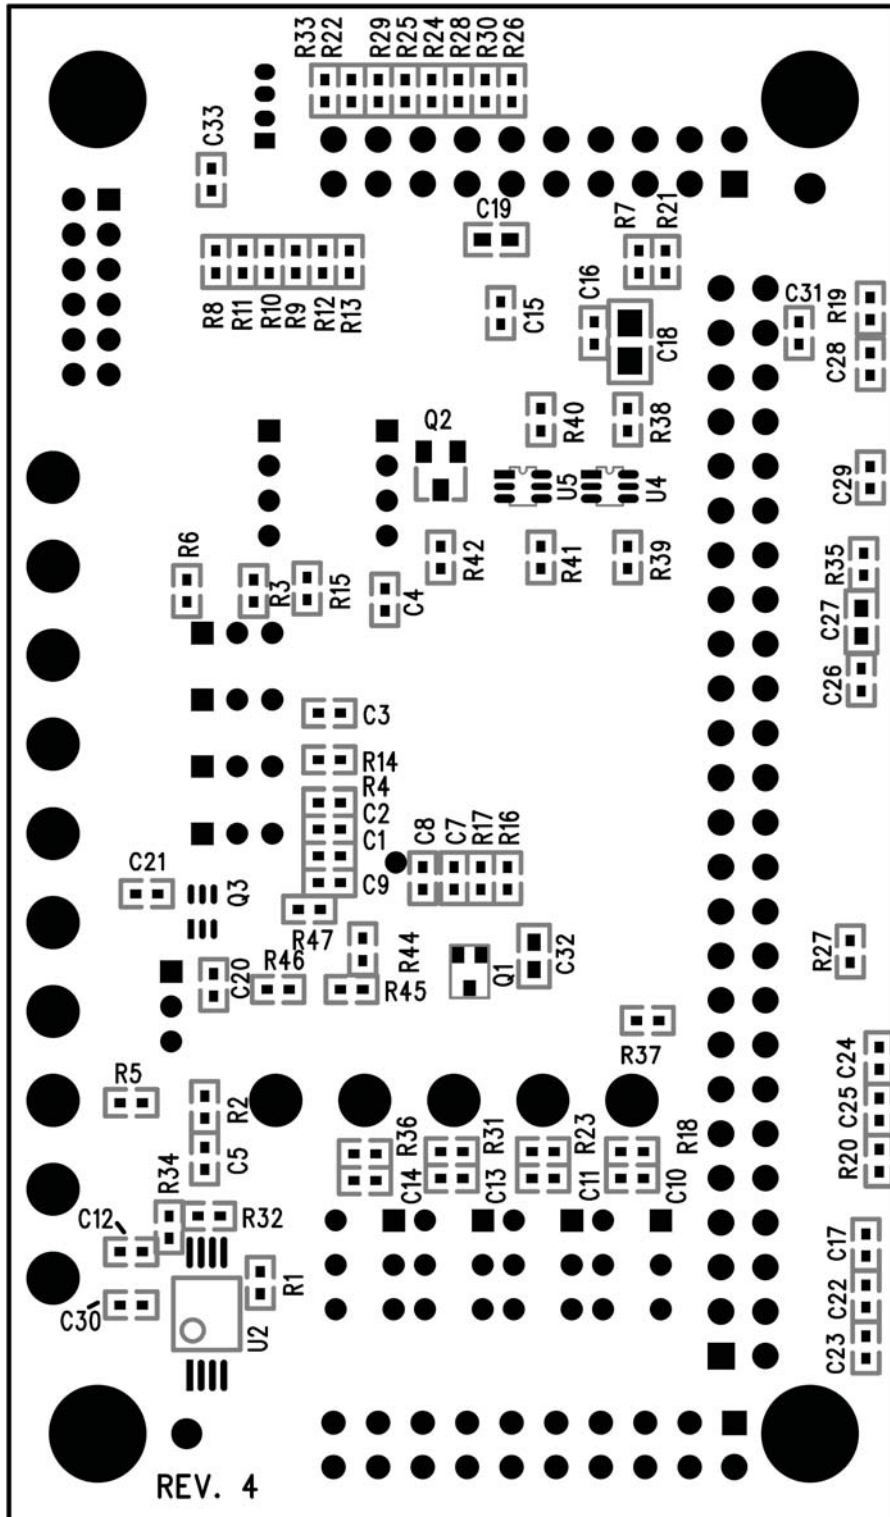

Table 4. DC1809A Default Jumper and Switch Configuration (Default Position Shown in Grey in the Figure Above)

## DEMONSTRATION BOARD IMPORTANT NOTICE

Linear Technology Corporation (LTC) provides the enclosed product(s) under the following **AS IS** conditions:

This demonstration board (DEMO BOARD) kit being sold or provided by Linear Technology is intended for use for **ENGINEERING DEVELOPMENT OR EVALUATION PURPOSES ONLY** and is not provided by LTC for commercial use. As such, the DEMO BOARD herein may not be complete in terms of required design-, marketing-, and/or manufacturing-related protective considerations, including but not limited to product safety measures typically found in finished commercial goods. As a prototype, this product does not fall within the scope of the European Union directive on electromagnetic compatibility and therefore may or may not meet the technical requirements of the directive, or other regulations.

If this evaluation kit does not meet the specifications recited in the DEMO BOARD manual the kit may be returned within 30 days from the date of delivery for a full refund. **THE FOREGOING WARRANTY IS THE EXCLUSIVE WARRANTY MADE BY THE SELLER TO BUYER AND IS IN LIEU OF ALL OTHER WARRANTIES, EXPRESSED, IMPLIED, OR STATUTORY, INCLUDING ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE. EXCEPT TO THE EXTENT OF THIS INDEMNITY, NEITHER PARTY SHALL BE LIABLE TO THE OTHER FOR ANY INDIRECT, SPECIAL, INCIDENTAL, OR CONSEQUENTIAL DAMAGES.**

The user assumes all responsibility and liability for proper and safe handling of the goods. Further, the user releases LTC from all claims arising from the handling or use of the goods. Due to the open construction of the product, it is the user's responsibility to take any and all appropriate precautions with regard to electrostatic discharge. Also be aware that the products herein may not be regulatory compliant or agency certified (FCC, UL, CE, etc.).

No License is granted under any patent right or other intellectual property whatsoever. **LTC assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or any other intellectual property rights of any kind.**

LTC currently services a variety of customers for products around the world, and therefore this transaction **is not exclusive**.

**Please read the DEMO BOARD manual prior to handling the product.** Persons handling this product must have electronics training and observe good laboratory practice standards. **Common sense is encouraged.**

This notice contains important safety information about temperatures and voltages. For further safety concerns, please contact a LTC application engineer.
