Product brief

iMOTION™ IMM100

Fully integrated Smart IPM for BLDC motor control

iMOTION™ IMM100 is a series of fully integrated Smart IPMs implementing sensorless Field Oriented Control (FOC) of a Permanent Magnet Synchronous Motor (PMSM). The combination of the iMOTION™ Motion Control Engine ("T"- variants) with the gate driver and six MOSFETs offers a complete motor drive system in a compact 12 x 12 mm^2 surface mount package, minimizing external components count and PCB area.
Infineon's field-proven Motion Control Engine (MCE) implements sensorless Field Oriented Control (FOC) with single or leg-shunt current feedback and uses space vector PWM with sinusoidal signals to achieve the highest energy efficiency. Additionally, IMM100 can take over the boost Power Factor Correction (PFC) control. Powerful PC tools like MCEWizard and MCEDesigner reduce the implementation effort for a variable speed drive to a simple configuration of the MCE for the respective motor, complemented by script engine for more system-level flexibility. Alternatively, "A"- variants of IMM100 offer full flexibility of running own motor control software on ARM® Cortex®-M0 core, while taking additional advantage of the complete hardware integration.

The integrated gate driver provides the bootstrap capability, adds signal filtering and offers several hardware protection mechanisms, e.g. dead-time insertion and shoot-through prevention, overcurrent, over-/undervoltage protection and fault reporting.

The IMM100 series does not require a heatsink and addresses motor drives with a rated output power up to 30 W/60 W/80 W with 600 V maximum DC blocking voltage.
