

Safe from 6 mm
Size newly defined:
PSRmini safety relays

The new generation of safety relays Narrow. Narrower. PSRmini.

PSRmini are the narrowest safety relays in the world with the performance of a large safety relay. In a compact 6 mm design, they offer tried-and-tested safety thanks to force-guided contacts.

This is made possible by the new relay technology from Phoenix Contact.

The unique features of the PSRmini product range make it ideal for use in machine building and in the process industry.

Benefit from our experience and design your application under completely new space and cost aspects.

What is a safety relay?

Safety relays consist of at least two force-guided elementary relays and enable the potential-free activation of safety-related signals. They evaluate signal sensors such as emergency stops, door switches or light grids.

Typical monitoring functions include:

- Plausibility monitoring of input signals
- Cross-circuit detection
- Start and feedback circuit monitoring

Product overview

Page 14

Narrow safety relays – Full performance in half the width

The complete PSRmini product line consists of 6 mm and 12 mm versions.

Despite their highly compact design, they exhibit high performance features: switching loads up to 6 A, compatibility with many signal sensors, versatile use thanks to comprehensive approvals and much more.

This ensures maximum safety through force-guided contacts. You save on space and gain flexibility, without the need to make compromises in the application.

The forced guidance

Elementary relays with force-guided contacts are used to ensure maximum safety for both person and machine. How do they do this?

The N/O and N/C contacts of an elementary relay are connected to one another mechanically through forced guidance. This prevents N/O and N/C contacts from closing at the same time. In conjunction with a suitable circuit, a failure to open can be reliably detected and then safely interlocked with a second independent shut-off path.

Highly compatible

Compatibility with all important signal transmitters and safety-relevant systems enables a wide range of applications.

Comprehensive approvals

Thanks to a variety of worldwide approvals, PSRmini is available for all relevant markets. For the first time, the installation of safe coupling relays in Ex zone 2 is possible.

Convenient connection methods

Screw and push-in spring connection technology offers convenient control cabinet installation.

Highly compact in 6 mm and 12 mm

The narrowest safety relay with force-guided contacts saves up to 70% on space.

Relay Technology

Designed by PHOENIX CONTACT

Innovative relay technology from Phoenix Contact offers maximum safety and high switching loads up to 6 A.

Available for one or more contacts

Fine-grained architecture makes a modular design of safety concepts possible: the 6 mm version comes with 1 to 2 enable paths, the 12 mm version with 2 to 3.

Relay technology from PHOENIX CONTACT – developed for change

The centerpiece of the new safety relay is the elementary relay with force-guided contacts developed by Phoenix Contact.

With its development, our team achieved the impossible: low space requirements, low energy consumption and superior system availability in an extremely narrow, high-performance elementary relay.

Progress through precision

The new elementary relay from Phoenix Contact boasts many outstanding technological details:

- Switching capacity of up to 6 A
- Superior availability thanks to the redundant diagnostics contact
- Installation in the hazardous area

Relay Technology
Designed by PHOENIX CONTACT

Robust steel springs for constant contact force over the entire service life

Optimized design of power contact ensures short-circuit protection

Safe contact distance of more than 0.5 mm for maximum dielectric strength

Redundant diagnostics contact provides maximum reliability

Symmetric magnet system for absolute robustness in the event of mechanical strain

Unique extrusion coating technology ensures precise mounting for high contact reliability

Patent covered operating principle of the motor enables the lowest power consumption

Tried-and-tested forced guidance in accordance with the EN 50205 standard guarantees maximum safety

PSRmini – Modular safety solutions for machine building

As a machine builder, you are familiar with the dynamics and requirements of your market. Safety technology is playing an increasingly significant role in this area, and standards and guidelines also make an important contribution.

With the PSRmini, we are giving you the option to create new safety concepts that offer you many advantages:

- Optimization of space usage in the control cabinet
- Highest availability and compatibility of system components
- Comprehensive approvals for global markets

Scalable safety relay solution
with PSRmini

What we offer

Phoenix Contact is closely associated with the machine building industry. From our in-house machine building department, we are well aware of the daily challenges of machine building. Our solution is the highly compact PSRmini safety relay:

- Low space requirements and high scalability
- Compatibility with a wide range of signal sensors such as emergency stop equipment, safety door switches and light grids
- Force-guided contacts enable maximum safety levels up to PL e in accordance with ISO 13849 and SILCL 3 in accordance with IEC 62061

Your benefits

With the new generation of safety relays, classic safety applications can be implemented under optimum conditions. For you, this means:

- Compact design of control cabinet modules through up to 70% less required space
- Cost-benefit optimization through the provision of just one enable contact
- Complete product range enables a large application range and a potential reduction in suppliers

PSRmini – for reliable availability in the process industry

As a specialist in the process industry, you count compatibility and reliability among the primary requirements for your systems and components.

For this reason, we would like to introduce to you our highly compact, safe coupling relays for electrical isolation and power adaptation.

Specially adapted to the relevant process control systems and requirements of your industry, we offer SIL-certified coupling modules for emergency shutdown and fire and gas applications.

Combined with the PSRmini, the Termination Carrier provides a unique packing density in the control cabinet

What we offer

Phoenix Contact has been a partner of the process industry for many years. The new, safe PSRmini coupling relays are the result of close cooperation and boast unique product features:

- Low space requirements and high scalability
- Simple diagnostics directly on the device and the controller thanks to forced guidance
- Comprehensive approval package and expanded temperature range across the entire device series
- Customer-specific Termination Carrier with system cabling

Your benefits

We strive to contribute to the safety of your system and to minimize downtimes. Our solution also reduces space and material requirements. For you, this means:

- Fewer control cabinets required thanks to up to 70% less required space
- Shorter downtimes during scheduled maintenance phases thanks to simple, fast diagnostics
- For the first time, the use of safe coupling relays all the way up to the explosive areas simplifies the design of decentralized concepts
- Reduction in installation times and fast, simple startup

PSR safety relay modules – The success story continues

If you need one device with one function, PSR safety relay modules are the perfect solution. Our modules operate with force-guided contacts in accordance with EN 50205. Your advantage: fast fault detection and a high level of safety.

To this day, we have consistently continued to develop our tried-and-tested technology to meet the market requirements of tomorrow. One result of our years of experience in the area of functional safety is our diverse PSR product line.

This page highlights selected innovations from the PSR range.

2000

PSRclassic

Market entry: coupling relay with force-guided contacts and plug-in, coded connection terminal blocks.

2002

PSRclassic

Expansion of the product line with classic safety relays for monitoring of emergency stop functions and safety doors.

2003

PSRclassic

First classic safety relay with SIL3 certification on the market, with screw and spring connection.

2005

PSRmotion

Speed monitoring and standstill monitors certified up to SIL3 – easy to configure using software.

2006

PSRmodular

Modular safety relay system, easily expandable through DIN rail connector – with twin spring connection and push-in technology.

2012

PSRclassic

Coupling relay for safe switching on – certified up to SIL3.

2013

PSRmultifunction

Multifunctional safety relay with three functions in new housing design.

2015

PSRmini

Safety relay and safe coupling relay – more compact than ever, always high-performance.

PSRmini – Product overview and order-related document

Highly compact, safe coupling relays for the process industry

The safety product portfolio

Safety relay

If you require just a small number of safety functions, the extensive PSRclassic product line is available in addition to the PSRmini.

Multifunctional safety relays

With PSRmultifunction, you can easily implement safety functions such as emergency stop, safety door or light grid monitoring – all in one device.

Configurable safety modules

The configurable, expandable module TRISAFE can be adapted individually to meet your safety requirements.

Highly compact safety relays for machine building

¹⁾ Possible up to PL e/SILCL 3 depending on the application

A = automatic start; M = manual, monitored start; DO = digital signal output

Network safety solutions

With SafetyBridge technology, the safety function is processed directly in the I/O modules.

Safe control technology

With the safety controllers, you can reliably integrate functional safety into PROFIsafe or INTERBUS networks.
