## FEATURES

$\pm 2 \mathrm{~V}$ to $\pm 6 \mathrm{~V}$ dual supply
2 V to 12 V single supply
<0.1 nA leakage currents (typical)
$45 \Omega$ typical on resistance over full signal range
Rail-to-rail switching operation
Single, 8 to 1 multiplexer
16-lead TSSOP package
$0.01 \mu \mathrm{~A}$ typical supply current
TTL/CMOS compatible inputs

## ENHANCED PRODUCT FEATURES

Supports defense and aerospace applications (AQEC standard)
Military temperature range: $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$
Controlled manufacturing baseline
One assembly/test site
One fabrication site
Enhanced product change notification
Qualification data available on request

## APPLICATIONS

Automatic test equipment
Data acquisition systems
Battery-powered systems
Communication systems
Audio and video signal routing
Relay replacement
Sample-and-hold systems
Industrial control systems

## GENERAL DESCRIPTION

The ADG658-EP is a low voltage, CMOS analog multiplexer comprised of eight single channels. The ADG658-EP switches one of eight inputs ( S 1 to S 8 ) to a common output, D , as determined by the 3-bit binary address lines A0, A1, and A2. An $\overline{\mathrm{EN}}$ input enables or disables the device. When disabled, all channels are switched off.
The ADG658-EP is designed on an enhanced process that provides lower power dissipation yet gives high switching speeds. It can operate equally well as either a multiplexer or a demultiplexer, and has an input range that extends to the supplies. All channels exhibit break-before-make switching action, preventing momentary shorting when switching channels. All digital inputs have +0.8 V to +2.4 V logic thresholds, ensuring TTL/CMOS logic compatibility when using single +5 V or dual $\pm 5 \mathrm{~V}$ supplies.
The ADG658-EP is available in a 16 -lead TSSOP package.
Additional application and technical information can be found in the ADG658 data sheet.

## PRODUCT HIGHLIGHTS

1. Single-supply and dual-supply operation. The ADG658-EP offers high performance and is fully specified and guaranteed with $\pm 5 \mathrm{~V},+5 \mathrm{~V}$, and +3 V supply rails.
2. Military temperature range $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$.
3. Low supply current, typically $0.01 \mu \mathrm{~A}$.
4. 16-lead TSSOP package.

## ABSOLUTE MAXIMUM RATINGS

$\mathrm{T}_{\mathrm{A}}=25^{\circ} \mathrm{C}$, unless otherwise noted.
Table 4.

| Parameter | Rating |
| :---: | :---: |
| $V_{\text {DD }}$ to $V_{\text {SS }}$ | 13 V |
| $V_{\text {D }}$ to GND | -0.3 V to +13 V |
| $V_{\text {ss }}$ to GND | +0.3 V to -6.5 V |
| Analog Inputs ${ }^{1}$ | $\mathrm{V}_{S S}-0.3 \mathrm{~V}$ to $\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}$ |
| Digital Inputs ${ }^{1}$ | GND -0.3 V to $\mathrm{V}_{\mathrm{DD}}+0.3 \mathrm{~V}$ or 10 mA , whichever occurs first |
| Peak Current, Sx or D <br> (Pulsed at $1 \mathrm{~ms}, 10 \%$ duty cycle max) | 40 mA |
| Continuous Current, Sx or D | 20 mA |
| Operating Temperature Range | $-55^{\circ} \mathrm{C}$ to $+125^{\circ} \mathrm{C}$ |
| Storage Temperature Range | $-65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$ |
| Junction Temperature | $150^{\circ} \mathrm{C}$ |
| $\theta_{\mathrm{JA}}$ Thermal Impedance 16-Lead TSSOP | $150.4{ }^{\circ} \mathrm{C} / \mathrm{W}$ |
| Lead Temperature, Soldering |  |
| Vapor Phase (60 sec) | $215^{\circ} \mathrm{C}$ |
| Infrared (15 sec) | $220^{\circ} \mathrm{C}$ |
| ESD (Human Body Model) | 4.0 kV |

${ }^{1}$ Overvoltages at $\mathrm{A}_{\mathrm{x}}, \overline{\mathrm{EN}}, \mathrm{Sx}$, or D are clamped by internal diodes. Current must be limited to the maximum ratings.

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

## ESD CAUTION

|  | ESD (electrostatic discharge) sensitive device. <br> Charged devices and circuit boards can discharge <br> without detection. Although this product features <br> patented or proprietary protection circuitry, damage <br> may occur on devices subjected to high energy ESD. <br> Therefore, proper ESD precautions should be taken to <br> avoid performance degradation or loss of functionality. |
