

Buck DC/DC Converter for Energy Harvester with Adjustable Maximum Power Point Control, Adjustable Output Voltage and PG Function Evaluation Board

No. EEV-422-K001A-201014

R1801K001A-EV is the evaluation board for R1801 which has the below features, benefits and specification.

OVERVIEW

R1801K is a power-storing buck DC/DC converter for a photovoltaic and vibration energy harvester. The Power Good (PG) function can output PG signal according to the output voltage facilitating to build a system. A low operating quiescent current allows a harvester to be used under a low-illumination environment, and it is suitable for an equipment with low power supplied from a harvester.

KEY BENEFITS

- Providing a low power supply (I_Q 200 nA) and a high efficiency (approximately 80% @ 10 μ A).
- Monitoring the output voltage to output Power Good (PG) signal.
- Adjustable output voltage and maximum power point control voltage by pin setting.

KEY SPECIFICATIONS

- Input Voltage Range: 2.3 V to 5.5 V
- Output Voltage Range: 2.8 V
- Maximum Power Point Control Voltage Range: 3.7 V
- Output Voltage Accuracy: $\pm 3.0\%$
- Operating Quiescent Current: Typ. 200 nA ($T_a = 25^\circ\text{C}$, at no load)
under condition of $V_{IN} = 4$ V, $V_{OUT} = 3.0$ V
- Starting Power: 1 μ W ($V_{IN} = 4$ V, $V_{OUT} = 3.0$ V)
- Reverse Current Protection ($V_{IN} \geq 2.0$ V)
- Adjustable Maximum Power Point Control, Adjustable Output Voltage
- PG Function

ABSOLUTE MAXIMUM RATINGS

Electronic and mechanical stress momentarily exceeded absolute maximum ratings may cause permanent damage and may degrade the lifetime and safety for both device and system using the device in the field. The functional operation at or over these absolute maximum ratings is not assured.

RECOMMENDED OPERATING CONDITIONS

Recommended Operating Conditions

Symbol	Parameter	Rating	Unit
V_{IN}	Input Voltage	2.3 to 5.5	V
T_a	Operating Temperature Range	-40 to 85	°C

RECOMMENDED OPERATING CONDITIONS

All of electronic equipment should be designed that the mounted semiconductor devices operate within the recommended operating conditions. The semiconductor devices cannot operate normally over the recommended operating conditions, even if they are used over such conditions by momentary electronic noise or surge. And the semiconductor devices may receive serious damage when they continue to operate over the recommended operating conditions.

ELECTRICAL CHARACTERISTICS

The specifications surrounded by are guaranteed by design engineering at $-40^{\circ}\text{C} \leq T_a \leq 85^{\circ}\text{C}$.

ADJUSTABLE MAXIMUM POWER POINT CONTROL / OUTPUT VOLTAGE

When the pin voltage of VMP1 to 3 and VSET1 to 3 is H, the maximum power voltage and VSET voltage are adjustable externally. 1 corresponds to +100 mV, 2 corresponds to +200 mV and 3 corresponds to -300 mV, and TYP. ± 300 mV is adjustable. However, setting all bits to H is a prohibited.

Due to the circuit configuration, the H / L level threshold voltage of each pin depends on the input voltage.

When using H voltage, it is recommended to pull up both of VMPPC / VSET to the input voltage.

Use the L voltage shorted to GND.

All adjustment pins should not be OPEN, use them as H / L levels.

Pin No.	Symbol	Description
1	AGND	Analog Ground Pin
2	VMP1	Maximum Power Point Control Voltage Adjustment Pin 1
3	VMP2	Maximum Power Point Control Voltage Adjustment Pin 2
4	VMP3	Maximum Power Point Control Voltage Adjustment Pin 3
5	VSET1	Output Voltage Adjustment Pin 1
6	VSET2	Output Voltage Adjustment Pin 2
7	VSET3	Output Voltage Adjustment Pin 3
8	PG	Power Good Pin
9	VFB	Output Voltage Pin
10	PGND	Power Ground Pin
11	LX	DC/DC Switching Pin
12	VIN	Pin for Connecting Photovoltaic Element

⁽¹⁾The tab on the bottom of the package enhances thermal performance and is electrically connected to GND (substrate level). It is recommended that the tab be connected to the ground plane on the board, or otherwise be left floating.

TECHNICAL NOTES

The performance of a power source circuit using this device is highly dependent on a peripheral circuit. A peripheral component or the device mounted on PCB should not exceed a rated voltage, a rated current or a rated power. When designing a peripheral circuit, please be fully aware of the following points.

- Using a ceramic capacitor with a lower equivalent series resistance (ESR) is recommended; a capacitor of 10 μF or higher for C_{IN} between VIN and GND pins, a capacitor of 47 μF or higher for C_{OUT} . Using a mass-storage device for C_{OUT} also is recommended. Please choose capacitors depending on the bias characteristics, V_{IN} and V_{OUT} . (Refer to *Recommended External Components*)
- Please choose inductors which have low direct-current resistance, enough allowable current and low magnetic saturation.
- When an intermediate voltage other than VIN or GND is input to the VMP1 to 3 and VSET1 to 3 pins, the supply current may increase due to the cross-conduction current of the IC internal logic circuit. When the VMP1 to 3 and VSET1 to 3 pins are open, the maximum power point control voltage and VSET voltage may vary. When using the IC, connect the VMP1 to 3 and VSET1 to 3 pins to "VIN" or "GND".

1. The products and the product specifications described in this document are subject to change or discontinuation of production without notice for reasons such as improvement. Therefore, before deciding to use the products, please refer to Ricoh sales representatives for the latest information thereon.
2. The materials in this document may not be copied or otherwise reproduced in whole or in part without prior written consent of Ricoh.
3. Please be sure to take any necessary formalities under relevant laws or regulations before exporting or otherwise taking out of your country the products or the technical information described herein.
4. The technical information described in this document shows typical characteristics of and example application circuits for the products. The release of such information is not to be construed as a warranty of or a grant of license under Ricoh's or any third party's intellectual property rights or any other rights.
5. The products listed in this document are intended and designed for use as general electronic components in standard applications (office equipment, telecommunication equipment, measuring instruments, consumer electronic products, amusement equipment etc.). Those customers intending to use a product in an application requiring extreme quality and reliability, for example, in a highly specific application where the failure or misoperation of the product could result in human injury or death (aircraft, spacevehicle, nuclear reactor control system, traffic control system, automotive and transportation equipment, combustion equipment, safety devices, life support system etc.) should first contact us.
6. We are making our continuous effort to improve the quality and reliability of our products, but semiconductor products are likely to fail with certain probability. In order to prevent any injury to persons or damages to property resulting from such failure, customers should be careful enough to incorporate safety measures in their design, such as redundancy feature, fire containment feature and fail-safe feature. We do not assume any liability or responsibility for any loss or damage arising from misuse or inappropriate use of the products.
7. Anti-radiation design is not implemented in the products described in this document.
8. The X-ray exposure can influence functions and characteristics of the products. Confirm the product functions and characteristics in the evaluation stage.
9. WLCSP products should be used in light shielded environments. The light exposure can influence functions and characteristics of the products under operation or storage.
10. There can be variation in the marking when different AOI (Automated Optical Inspection) equipment is used. In the case of recognizing the marking characteristic with AOI, please contact Ricoh sales or our distributor before attempting to use AOI.
11. Please contact Ricoh sales representatives should you have any questions or comments concerning the products or the technical information.

Ricoh is committed to reducing the environmental loading materials in electrical devices with a view to contributing to the protection of human health and the environment.

Ricoh has been providing RoHS compliant products since April 1, 2006 and Halogen-free products since April 1, 2012.
