

Hall-Effect Through-Shaft Rotary Position Sensor

KEY FEATURES

True, contactless operation

Without any gears or mechanical interfaces the sensor is easily assembled and calibrated and subject to limited wear and tear over lifetime.

Through-hole design

Allows shaft insertion from top or bottom, simple assembly and makes it even more suitable in applications where space is limited.

360 degree absolute position feedback

Endless mechanical rotational angle without dead band, keeps the position on power loss with programmable electrical angles from 15 to 360 degrees.

Made for harsh environments

The rugged package protects the sensor from dust, moisture, vibration and extreme temperatures for usage in the most demanding environments.

Durable and robust design

The non-contacting design allows for an extra-long product lifetime of up to 50 million cycles.

Adaptable to your requirements

Programmable transfer function and switch outputs as well as different output protocols and redundancy levels available.

DESCRIPTION

The PST-360 position sensor combines a throughshaft design with accurate absolute position feedback and a true non-contacting sensing element that does not rely on gears or other rotating parts.

This innovative and unique patented design complements the attributes of the target application and maintains the mechanical integrity of the application by design. As the sensor is mounted directly at the pivot point no levers, connecting rods or other mechanical interfaces are needed. Furthermore it adapts to shaft's eccentricity, mounting tolerances and mechanical wear over the life of the application.

The endless rotation sensor is highly configurable with a programmable angular range between 15 and 360 degrees, different signal output options and support for low and high-voltage power supply. Multi-turn configurations are available on request.

APPLICATIONS

Industrial

- ► Autonomous warehouse robotics
- ▶ Robotics and automation feedback
- ▶ Robot arm position
- ► Valve monitoring
- ► Conveyor operation

Transportation

- ▶ Steering angle
- ▶ Pedal position
- Fork height and mast tilt
- ▶ Bucket position
- ▶ Hitch position
- ▶ Boom angle
- ▶ Joystick controls

Marine

- ▶ Steering and shifter sensor
- ► Engine throttle

Home and Building Automation

► HVAC systems

Medical

- ► Electric hospital bed
- ▶ Mobility chair steering and throttle

Hall-Effect Through-Shaft Rotary Position Sensor

- 1 Other rotors available on request.
- 2 The analog output is ratiometric, proportional: for supply voltage "5V" to input voltage; -for supply voltage "RE" to 5V. 3 Other output functions available, please check availability. Enter CXXXX as long as the new output function is not defined.
- 4 Models with ERA < 40° available on request
- 5 Voltages up to 25V possible on request.
- 6 Leave empty if not applicable. Default frequency is 200 Hz

MOUNTING INSTRUCTIONS

- Place the component on a flat surface.
- Fit the shaft of the application (see recommended shaft dimensions) through the sensor's rotor avoiding any mechanical play/wobble.
- Fasten the two M5 screws (M5 washers are recommended).

OUR ADVANTAGE

- ▶ Leading-edge innovative position sensing solutions
 - Contactless (Hall-effect and Inductive Technology)
 - Contacting (Potentiometers, Printed Electronics)
- ► Engineering design-in support
- ▶ All our products can be customized to fit target application and customer requirement
- ▶ Capability to move seamlessly from development to true high-volume production
- A global footprint with global engineering and commercial support
- ▶ One-stop shop not limited to position sensors (temperature, pressure, gas,...) through group collaboration
- ▶ Flexibility and entrepreneurship of a medium-sized company with the backing of Amphenol Corporation

Please always use the latest updated datasheets and 3D models published on our website.
