For high-performance sealing and strain relief, the perfect mate for a TE Connectivity molded part in a wiring application is a Raychem brand adapter.
TE offers a variety of adapters for applications in many industries, including aerospace, marine, and mass transit.
These adapters are:

- Available in many configurations to match applications
- Easy to install
- Ideal for high-reliability applications
- Kitted for customer convenience.

In this section we present Raychem brand spincoupling adapters and Tinel-Lock adapters.
The Tinel-Lock adapter utilizes Raychem brand Tinel rings to terminate the overall shield to the adapter. The Tinel ring is a low-profile, high-strength, shape-memory-alloy shieldtermination device available in many sizes to accommodate various entry sizes and shield configurations.
Tinel-Lock adapters are ideal for lightweight aerospace applications requiring repeated high-to-low temperature cycles.

Note: Users should independently evaluate the suitability of the product for their application. Before ordering, check with TE for most current data.

## Definitions

## Introduction

For high-performance sealing and strain relief, the perfect mate for a TE molded part in a wiring application is a Raychem brand adapter.
TE offers a variety of Raychem brand adapters for applications in many industries, including aerospace, marine, and mass transit.
These adapters are:

- Available in many configurations to match applications
- Easy to install
- Ideal for high-reliability applications
- Kitted for customer convenience.

In this section we present Raychem brand spincoupling adapters and Tinel-Lock adapters.
The Tinel-Lock adapter utilizes TE Tinel ring to terminate the overall shield to the adapter. The Tinel ring is a low-profile, highstrength, shape-memoryalloy shield-termination device available in many sizes to accommodate various entry sizes and shield configurations.
Tinel-Lock adapters are ideal for lightweight aerospace applications requiring repeated high-to-low temperature cycles.

## Adapter Family

TE offers several families (or series) of Raychem adapter products. Each Raychem adapter part number begins with an alphanumeric prefix denoting the Raychem product family.

## Entry Size

Entry size is the diameter of the hole through which the cable enters into the adapter. For example, the 08 entry is 12.7 [0.5]. Entry sizes are specified on braided and Tinel-Lock adapters only.

## Ring Designator

This is a two-letter code that is part of each Tinel-Lock adapter part number. It specifies the size of the Tinel-Lock ring suited to specific types of cable braid.

## Shell Size

This is the size of a connector as specified by the connector manufacturer. It is normally a two-digit number between 08 and 24, although certain connectors are obtainable in either larger or smaller sizes and some use letter codes.

## Order Number

This is a two-digit number that specifies the size of the adapter that will mate to the corresponding shell size of a connector. The order number is frequently the same as the connector shell size, but should be checked by reference to the appropriate product page(s) in this catalog.

## Types of Adapters

## Adapter Types

TE offers several types of Raychem brand adapters for unscreened and screened termination systems. The choice is largely dependent upon the screening level required and the braid termination method.
The four principal adapter types are:
■ Solid (fixed)

- Spin-Coupling
- Braided
- Tinel-Lock

## Solid Adapters (Fixed)

Solid adapters are designed for use where no access is required; for example, when potting is necessary or a lower space profile is needed.

These adapters have a boot groove to accommodate a lipped heat-shrinkable boot. Repair cannot be made without removing the boot.

## Spin-Coupling Adapters

Spin-coupling adapters are two-part components that have a rotatable coupling nut and a grooved body designed to accommodate lipped-type heat-shrinkable boots.
Spin-couplings with an appropriate molded part are used for environmental protection and strain relief of unscreened cable terminations. Cable repairs can be made without damaging the boot.

## Braided Adapters

These are spin-coupling adapters that have a short length of tubular braided shield attached to the rear of the adapter. The braid is constructed from tinned copper wire and has a handling characteristic that enables it to be pulled down onto a wide range of cable diameters. This allows a standard entry size to be used with most cable sizes.
The shield is terminated to the cable braid using a SolderSleeve device, which provides screen continuity through to the connector. Straight, $45^{\circ}$, and $90^{\circ}$ configurations are available. to change.

Types of Adapters (Continued)

## Tinel-Lock Adapters

This termination system consists of a modified spin-coupling adapter with a Tinel-Lock ring. The Tinel-Lock ring is made from a special shape memory metal that shrinks uniformly when heated (see Application Tooling, section 10).

The Tinel-Lock ring is used to terminate copper cable braid directly onto the rear of the adapter. The adapter entry size and ring designator must be selected to suit the cable diameter and braid type.
The resulting $360^{\circ}$ termination withstands severe shock, vibration, temperature cycling, and corrosion. Straight, $45^{\circ}$, and $90^{\circ}$ configurations are available.

## Roll-back Repair with Adapters

More than 85 percent of cable repairs are made within 75 mm [3.0] of the connectors-usually because of a broken pin or wire. By reheating the heatshrinkable boot and unscrewing the adapter coupling nut, the boot can be "rolled back," providing access to the rear of the connector for repair. This technique is applicable to spin-coupling, shielded, and Tinel-Lock adapters.

Adapter Fundamentals

## Adapter Selection Process

## Step-by-Step Selection Process

Selecting an adapter for your application involves a five-step process:

1. From the connector number, determine:

- Order number (shell size)
■ Material
- Plating

2. Decide what adapter type you need for the connector.
3. Determine the connector code for that adapter type. (Use Table A, B, or C on pages 6-6 to 6-15).
4. Determine the adapter family for that connector code. (Use Table D on page 6-16).
5. Build the adapter part number. (See page 6-17).
The chart below will lead you through these steps.

| Adapter Selection Flowchart | Decide on Adapter Type |  |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
|  | Select Adapter Code |  |  |
|  | Select Adapter Family |  |  |
|  |  |  |  |
| $\underset{\text { Tinel }}{V}$ | Shielded | Solid or Spin-Coupling | CRES-Lock Band |
| - Choose configuration | - Choose configuration | ■ Select options | ■ Choose configuration |

## Table A. Adapter Code by Military Part Number

## Selecting the Adapter Code

Tables A, B, and C that follow provide adapter codes for typical connectors.
If you know the military part number for the connector, you can obtain the adapter code from Table A that begins on this page.
If you know the manufacturer's prefix for the connector, you can obtain the adapter code from Table B that begins on page 6-10.
If you know the connector specification, you can obtain the adapter code from Table C on page 6-15

## Adapter Code

| Military Part No. | Connector Specification | Series/Class | Adapter Code |
| :---: | :---: | :---: | :---: |

## Adapter Family

Selecting the Adapter Family

Using Table D below and the adapter code you selected in Table A, B, or C, select the adapter family for the adapter type you chose
(spin-coupling or
Tinel-Lock).
With the alphanumeric
prefix for that family you can
then build the part number
for your TE adapter.

Table D. Identification of
Adapter Family Prefix by
Adapter Code

| TE <br> Connector Code | Boot Adapter |  | Shielded Adapter |  |  | Tinel-Lock Adapter Straight, $45^{\circ}$, and $90^{\circ}$ | CRES-Lock Band Strap Adapter |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Solid (Fixed) | Spin-Coupling | Straight | $45^{\circ}$ | $90^{\circ}$ |  |  |
| 15 | 210M5 | 202M5 | 219M0 | 219M1 | 219M2 | TXR 15 | - |
| 18 | 218M5 | 218M6 | 218M7 | 218M8 | 218M9 | TXR 18 | BND 18 |
| 19 | 201M7 | 201M4 | - | - | - | - | - |
| 21 | 203M6 | 203M9 | 206M0 | 206M1 | 206M2zx | TXR 21 | BND 21 |

## Part Number

## Having Selected the Right Adapter Type and Adapter Family, You Can Now Construct a Part Number for the Adapter.

| 1. Start with the alphanumeric prefix you selected in Table D. This will be the basis of your part number. | - Order number <br> ■ Manufacturer's prefix <br> - Material <br> - Finish | Using the right codes and designators helps ensure that the adapter you select will meet the application requirements. |
| :---: | :---: | :---: |
| 2. Add to the prefix the codes and designators required for your adapter type and application. These may include several or all of the following: | ■ Entry size <br> ■ Ring designator <br> ■ Option codes | To determine which codes and designators you will need, use the Part numbering system shown below. To select the right codes and designators, turn to the pages that follow. |

## Part Numbering System

- Standard braid length (6") requires no modification code.
- Nonstandard braid length is stated in inches ( $12=12$ " length)
*For full range of options, consult TE.
Adapter family
Material (A - aluminium alloy; S = stainless steel)

## Notes:

1. See Drawings BND-1225S or BND-XX25S for information on bands. Adapter dimensions for "A" designation may be different than those listed in this catalog. Contact Tyco Electronics for Specification Control Drawing (SCD) for these adapters.
2. Alternative equivalent material specifications to those shown may be supplied at Tyco Electronics' discretion.
3. For standard entry sizes see relevant specification control drawing. For entry sizes larger than standard (Type II Adapters), see sheets 3 and 4.

## Material and Finish

## Selecting the Material and Finish

To ensure optimum compatibility, select the adapter material and finish to match those of the connector.

Most circular connectors are manufactured from aluminum with a cadmium finish.

## Material Codes

| Material <br> Description | Material Code <br> Solid, Spin-Coupling, <br> and Shielded Adapters | Tinel-Lock <br> Adapters | Typical <br> Applications |
| :--- | :---: | :---: | :--- |

## Entry Size

## Determining the Wire Bundle Size

The entry size of an adapter is based on the size of the wire bundle. If you don't know the size of the wire bundle, measure a prototype or calculate the size.

Calculation of the wire bundle size is based on three values:

■ Cable outside diameter (COD)
■ Cable jacket thickness ■ Jacketed cable diameter Instructions for calculating these values follow.

## COD Calculation

To calculate the cable outside diameter, first determine whether the wires in the bundle are of the same size or of different sizes.

## COD Calculation for Wires of the Same Size

For bundles with wires that are all of the same size, follow these steps:

1. Determine the number of wires in the wire bundle.
2. Find the multiplication factor for that number in Table E shown on the next page.
3. Find the wire diameter in the Wire and Cable section (Section 9) of this catalog.
4. Multiply the wire diameter (from Step 3) by the multiplication factor (from Step 2) as shown below.

Formula: D = Fd

```
Where:
D = Bundle diameter
F = Multiplication factor
d = Wire diameter
```

Example: A bundle of wires containing $27 \times 44 A 0111-22$
$F=6.00$ (the multiplication
factor for 27 wires from Table E)
$d=1.19 \mathrm{~mm}(.049 \mathrm{in})^{\star}$
$\mathrm{D}=6 \times 1.19 \mathrm{~mm}(6 \times .049$
in)
$D=7.14 \mathrm{~mm}$ (. 294 in )
*Diameter of 44A0111-22 wire obtained from the Wire and Cable Section 9 of this catalog
COD Calculation for Wires of Different Sizes

To determine the wire bundle diameter when using wires of different sizes, follow these steps:

1. Determine the number of wires in the wire bundle.
2. Find the diameter of the wires in the Wire and Cable section of this catalog.
3. Calculate the cable outside diameter by using this formula:

$$
\mathrm { D } = 1 . 2 \longdiv { \mathrm { N } 1 \mathrm { d } 1 2 + \mathrm { N } 2 \mathrm { d } 2 2 + \mathrm { N } 3 \mathrm { d } 3 2 }
$$

Where:
D = Bundle diameter
$\mathrm{N}=$ Number of wires
d = Diameter of wires
Example: A bundle of wires
containing
$3 \times 44 A 0111-221^{*}$ (1.192mm dia.)
$5 \times 44 A 0111-201^{*}$ (1.42mm dia.)
$1 \times 44 A 0111-181^{*}(1.65-$ mm dia.)
$D=1.2 \sqrt{3 \times 1.192^{2}+5 \times 1.42^{2}+1 \times 1.65^{2}}$
$D=1.2 \sqrt{3 \times 1.4+5 \times 2.02+1 \times 2.7}$
$D=1.2 \sqrt{4.2+10.1+2.7}$
$D=1.2 \sqrt{17}$
$D=1.2 \times 4.12$
$D=4.95 \mathrm{~mm}$
*For wire information see the Wire and Cable Section 9 of this catalog.

Adapter Selection

Table E. Multiplication Factors for Wire Bundles with Equal Size Wires
This table provides multiplication factors for wire bundles of 1 to 61 wires.

To determine the approximate diameter of a wire bundle when the wires are all the same size, find the factor for the number of wires in the bundle and multiply the wire diameter by that factor.

Entry Size (Continued)

| Number of Wires | Multiplication Factor | Number of Wires | Multiplication Factor |
| :---: | :---: | :---: | :---: |
| 1 | 1.00 | 32 | 6.70 |
| 2 | 1.60 | 33 | 6.70 |
| 3 | 2.00 | 34 | 7.00 |

| 31 | 6.70 | - | - |

Entry Size (Continued)

## Cable Jacket Thickness

 CalculationTo determine the wall thickness of a jacket over a wire bundle:

1. Use the chart in Figure 1 to determine the unresolved recovery of the tubing jacket
2. Use the chart in Figure 3 to determine the wall thickness reduction factor.
3. Calculate the jacket wall thickness by multiplying the fully shrunk wall thickness (as detailed in the Tubing section - Section 3 - of this catalog) by the wall thickness reduction factor.

Step 1. Determine the Unresolved Recovery of the Tubing Jacket.

1. Locate the recovered and expanded diameters of the chosen tubing size on the chart in Figure 1.
2. Lay a straight edge between the two values and pencil in a straight line connecting them.
3. Find the wire bundle diameter on the Expanded Diameter scale of the chart in Figure 1.
4. From the wire bundle diameter value, draw a straight horizontal line across the chart.
5. From the intersection of the line from step 3 and the line from step 2, read down vertically to the "Unresolved Recovery" for this combination.

Dimensions are shown for reference purposes only. Specifications subject to change.

Entry Size (Continued)

Figure 3.

Step 2. Find the Wall Thickness Reduction Factor.

1. On the Unresolved Recovery scale of the chart in Figure 3 above, find the unresolved recovery value determined in Step 1.
2. From the unresolved recovery value, draw a straight line across the chart to the curved line.
3. At the point where that line intersects the chart's curved line, read vertically down to the wall thickness reduction factor.
Example shown:
Unresolved recovery = 50\%
Reduction factor $=0.68$

Step 3. Calculate the Jacket Wall Thickness.
Multiply the fully shrunk wall thickness of the tubing by the reduction factor.
Example:
Fully shrunk
wall thickness
of tubing $\quad=1.45 \mathrm{~mm}$
Wall thickness reduction factor (from Figure 3)

$$
=0.68
$$

Jacket wall thickness

$$
\begin{gathered}
=1.4 \times 0.68 \\
=0.99 \mathrm{~mm}
\end{gathered}
$$

Note:
If the cable is to be shielded (screened), an addition must be made to the wire bundle diameter for the braid. In the example, 0.8 mm would be added to the wire bundle diameter for a single layer of RAY 101 (36 AWG) braid to make a total wire bundle diameter of 13.8 mm.
Catalog 1654025
Revised 3-13 Revised 3-13 www.te.com Specifications subject to change.

Entry Size (Continued)

Figure 4. Entry Size by Cable Outside Diameter (in millimeters)

## Determining the Entry Size

Once you have the wire bundle size, you can use the chart in Figure 4 to select the entry size. This chart shows the minimum entry sizes for cables from 3 to 38 mm [. 118 to 1.496 in ] in diameter. In other words, the white spaces on the chart represent all of the cable outside diameters each entry size will fit.

Follow these steps:

1. Find the cable diameter on the chart.
2. Note the lowest entry size that will fit the cable diameter

## Braided Adapters

The extreme flexibility of the braid on these adapters accommodates a large range of cable diameters. It is therefore recommended that the standard entry size for any given adapter part number be specified as indicated on the relevant data sheet. Nonstandard entry sizes are available on special order.
Use the selection chart in Figure 4 to ensure that the standard entry size will pass over the jacketed cable diameter.

## Tinel-Lock Adapters

With Tinel-Lock adapters, the cable braid must be opened up to fit onto the outside diameter of the adapter entry. For optimum performance, select the smallest entry size that will pass over the jacketed cable diameter. Repair of the connector will be easier using the boot and shield rollback if a slightly larger than minimum entry size is used.
The selection chart in Figure 4 shows the minimum entry sizes for cable diameters in the range of 3 mm to 38 mm . This will ensure that the jacketed cable passes through the adapter for easy assembly.

It should be checked to be sure the braid will open sufficiently to fit the entry size selected and to ensure that the braid and boot can be rolled back.

## Ray 101 Tinned-Copper Braid

TE manufactures a range of Raychem tubular braided shields (sometimes called "screens") that are used for shielding hand-built harnesses

These braids are specially designed to have:

■ Good surface transfer impedance

- Large opening ratio
- Good handling characteristics
- Compatibility with

Tinel-Lock adapters

Dimensions are shown for reference purposes only. Specifications subject to change.

## Tinel-Lock Ring

## Tinel-Lock Ring and Braid

The Tinel-Lock ring designator must be specified according to the type of cable braid used, and is added to the part number after the adapter entry size. There are two types of ring, Al and BI , for each entry size.
Tinel rings are marked with thermochromic paint, which
 changes color when the correct installation temperature is reached. Bl-type rings are identified with a red spot.
Braid type, material, and construction are variable Refer to drawing CHOO-0250-008 for Tinel-Lock adapters.

| Braid Type | Ring Designator |
| :---: | :---: |
| Single layer 36 AWG | AI |
| Single layer 34 AWG | AI |
| Single layer 32 AWG | BI |
| Single layer 30 AWG | BI |
| Double layer 36 AWG | BI |
| Double layer 34 AWG | BI |

*Note: It may be necessary to use an ' $A$ ' rather than a ' $B$ " ring on entry sizes 04-07 when terminating a multicore cable with double layer machined braid. Braid applied by machine provides less size flexibility than pull-on braid at the smaller entry sizes. If disturbance during assembly causes loss of braid lay, grip of the tinel ring may be affected. Evaluation is recommended. Contact TE for more information.

## CRES-Lock Bands

The CRES-Lock band strap designator must be specified when using a band adapter. There are two forms of band that are available - precoiled and straight. Straight is a standard configuration and does not require any notation. If precoiled bands
are required, an option $P$ must be used. Refer to CH00-0250-016 drawing for more detailed information. CRES-Lock band strap comes in 12 inch length. These fit all entry sizes for both the CRES-Lock adapter.

## CRES-Lock Adapters (USA) BND Adapters (Europe)

## Code 21 Band Strap

Adapter

## Notes

1. This product is designed to terminate a braided cable shield by means of a band strap and a heat shrinkable lipped boot to a connector.
2. See $\mathrm{CH} 00-0250-016$ for ordering information, modifications and additional dimensions.
3. See drawing BND-XX25S for band strap dimensions and information.
4. Adapter to be permanently marked with code identification number and full part number (e.g. 06090-BND21AB00-1812). Band strap shall bear no part marking.
5. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.
6. Adapter mates to: MIL-C-26482 Series I, MS3110, MS3116, MS3120 and MS3126 Class E and F Connectors.
7. Anti-rotational set screw, 3 threaded holes $120^{\circ} \pm 5^{\circ}$ apart, single mating set screw supplied: AN565DC4H2. Not required for Type II adapters.

For additional codes available, contact TE.

1. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.
2. Adapter mates to: MIL-C-26482 Series I, MS3110, MS3116, MS3120 and MS3126 Class E and F Connectors.

Adapter Products

## CRES-Lock Adapters (USA) BND Adapters (Europe)

## Code 32 Band Strap <br> Adapter

## Notes

1. This product is designed to terminate a braided cable shield by means of a band strap and a heat shrinkable lipped boot to a connector.
2. See $\mathrm{CH} 00-0250-016$ for ordering information, modifications and additional dimensions
3. See drawing BND-XX25S for band strap dimensions and information.
4. Adapter to be permanently marked with code identification number and full part number (e.g. 06090-BND32AB00-1812). Band strap shall bear no part marking
5. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.
6. Adapter mates to: MIL-C-22992,

Class C and R, MS17343, 44, 45 and 47 Connectors.
7. Anti-rotational set screw, 3 threaded holes $120^{\circ} \pm 5^{\circ}$ apart, single mating set screw supplied: AN565DC4H2. Not required for Type II adapters.

## For additional codes available,

1. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.
2. Adapter mates to: MIL-C-22992, Class C and R, MS17343, 44, 45 and 47 Connectors.

## CRES-Lock Adapters (USA) BND Adapters (Europe)

## Code 40 Band Strap Adapter

## Notes

1. This product is designed to terminate a braided cable shield by means of a band strap and a heat shrinkable lipped boot to a connector.
2. See $\mathrm{CH} 00-0250-016$ for ordering information, modifications and additional dimensions.
3. See drawing BND-XX25S for band strap dimensions and information.
4. Adapter to be permanently marked with code identification number and full part number (e.g. 06090-BND40AB00-1814). Band strap shall bear no part marking
5. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.
6. Adapter mates to: MIL-C-38999 Series III and IV, Class C, F, K and W, D38999/20, /24, /26, /40, /46 and /47 Connectors. When so mated it shall provide a water-tight seal meeting the requirements of MIL-C-85049, paragraph 3.5.7.
7. Coupling nut shall have 3 lock wire holes $120^{\circ}$ apart.

For additional codes available, contact TE.

Adapter Products

## CRES-Lock Adapters (USA) BND Adapters (Europe)

## Code 41 Band Strap Adapter

## Notes

1. This product is designed to terminate a braided cable shield by means of a band strap and a heat shrinkable lipped boot to a connector.
2. See $\mathrm{CH} 00-0250-016$ for ordering information, modifications and additional dimensions
3. See drawing BND-XX25S for band strap dimensions and information.
4. Adapter to be permanently marked with code identification number and full part number (e.g. 06090-BND41AB00-1812). Band strap shall bear no part marking
5. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.
6. Adapter mates to: MIL-C-38999 Series I and II, Class E and T, MS27466, MS27467, MS27468, MS27472, MS27473, MS27474, MS27479, MS27480, MS27481, MS27484, MS27497, MS27652, MS27653 and MS27656 Connectors.

For additional codes available, contact TE.

## CRES-Lock Adapters (USA) BND Adapters (Europe)

## Code 54 Band Strap <br> Adapter

## Notes

1. This product is designed to terminate a braided cable shield by means of a band strap and a heat shrinkable lipped boot to a connector
2. See $\mathrm{CH} 00-0250-016$ for ordering information, modifications and additional dimensions.
3. See drawing BND-XX25S for band strap dimensions and information.
4. Adapter to be permanently marked with code identification number and full part number (e.g. 06090-BND54AB00-1812). Band strap shall bear no part marking.
5. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See CH00-0250-016 for further details.

For additional codes available, contact TE.

1. All entry sizes are shown in Table II. Maximum entry sizes are as shown in Table I. For larger entry sizes than the maximum, a Type II adapter may be supplied. See $\mathrm{CH} 00-0250-016$ for further details
2. Adapter mates to: MIL-C-81703 Series III, MS3424, MS3446, MS3464, MS3467, MS3468, Class E and L Connectors 3. Adapter mates to MIL-C-5015G, MS3400 Series, Class D, E, K, L, U and W: MS3400, MS3401, MS3404, MS3406, MS3450, MS3451, MS3454, MS3456, MS3470, MS3471, MS3472, MS3474, MS3475, MS3476, MIL-C-83723 Series II, Class A and L. MIL-C-83723, /14, /36, /37, /38, /39, /40, /41, /42, /43, /48, /49, /65, /66, /67, /68, /69, /70, /71, /72, /73, $/ 74, / 75, / 76, / 77, / 78, / 82, / 83, / 84, / 85, / 86, / 87, / 91, / 92, / 95, / 97$, and $/ 98$ Connectors, MS3155 controlled interfaces 4. These dimensions apply if a self-locking coupling nut is used, modification code "S".

## FlexiScreen Backshells

The FlexiScreen high performance backshells are designed to provide EMC protection for both commercial and military applications. FlexiScreen backshells represent a significant improvement over pig-tail termination methods by providing $360^{\circ}$ EMC shielding on the termination area of each individual cable. FlexiScreen backshell terminations can be installed to allow the cable bundle to be installed at various angles, such as $30 \& 45^{\circ}$, using a single backshell design.
FlexiScreen backshells can be installed to allow the cable bundle to be formed at various angles, such as $90^{\circ}$ and $45^{\circ}$, using a single backshell design.
FlexiScreen backshells are a cost effective solution while maintaining low weight.

Product Facts<br>■ Cost effective solution<br>- Capitalizes on proven performance of HexaShield adapter components<br>■ Flexible and variable bending configurations<br>■ Light weight<br>- Repairable<br>■ Out performs commonly used alternatives

## Raychem FlexiScreen Backshells

## Applications

Designed to be mounted on MIL-DTL-38999, 83723, 26482, 5015, or commonly used connectors
Aerospace, Defense, Ground Vehicles, Control Circuits - where excellent EMI and shielding performance is required

## Standards \& Specs

Finish Types: SAE-AMS-PQ-P-416 cadmium olive drab, SAE-AMS-C-26074 Class 3, grade B Electroless Nickel (others available upon request)
TE Specification RB-117
RPIP-696-21 Installation Procedure for FlexiScreen backshells

## Kit Contents

1 backshell assembly
1 multi-position star
1 band strap

## Electrical

DC resistance: $<5.0 \mathrm{~m} \Omega$ braid to backshell per SAE-AS85049
$<10.0 \mathrm{~m} \Omega$ braid to cable braids per RB-117
Shielding effectiveness: Complies with ANSI/NEMA EC 61-2005
Lightning strike: No damage or degradation of components. Tested per RTCA/DO-160F, Section 22

## Physical or Other Properties

Vibration:
Tested per EAI-364-28, test condition VI, Letter J
Mechanical shock:
Tested per EAI-364-27, test condition D
Cable pull-out:
Tested per MIL-STD-1344, method 2009-1, test condition A
Operating temperature: $-65^{\circ}$ to $+150^{\circ}$

Designed to corresponding connector specifications

Installation Procedures

## Applications

TE, a longtime leader in harnessing technology, has written a new chapter in EMC shielding with the introduction of the Raychem brand HexaShield EMC adapter.
Designed to provide EMC protection solutions for both commercial and military applications, HexaShield adapters represent a significant improvement over pigtail termination methods. By providing 360-degree EMC shielding on the termination area of each individual cable, HexaShield adapters provide outstanding shielding effectiveness.
HexaShield adapters are simple to install, easy to
maintain, and dependably resistant to mechanical and environmental stresses.

## Principal points and features

■ Easy reentry: To insert or remove ferrules from the HexaShield adapter, simply loosen the back nut.

■ Superior protection: No degradation of shielding performance.
■ Up to four shielded cables accommodated by each ferrule.
■ Mechanical and environmental protection equal to backshells complying with MIL-C-85049 Category 3B.

- Strain relief on each individual cable.
- Weight reduction, by possibly eliminating the need for overall shielding.
- Compact size - not exceeding outer diameter of connector.
- Available in straight, $45^{\circ}$ and $90^{\circ}$ angles, as well as swept and long bodies.

## Simple assembly and installation

1. Solder cable or wire shield to a ferrule with a heat-shrinkable SolderShield terminator.
2. Clip ferrule into one of the grounding star cavities.
3. Secure the back nut of the HexaShield adapter so that the conic ring assembly automatically compresses the ferrules.

## Kit Descriptions

Hexashield Adapters for
Circular Connectors:
Straight, $45^{\circ}$ and $90^{\circ}$
Assemblies

| Item | Description |
| :--- | :--- |
| 1 | Straight adapter assembly |
| 2 | Conic ring assembly |
| 3 | Star <br> Plain (Standard) <br> Drilled (Option) <br> Split (Option) _ |
| 4 | Straight adapter assembly - "L" version <br> - nominally 0.5" [12.7] longer body |
| 5 | $45^{\circ}$ adapter assembly - welded |
| 6 | $45^{\circ}$ adapter assembly - swept |
| 7 | $90^{\circ}$ adapter assembly - welded |
| 8 | $90^{\circ}$ adapter assembly - swept <br> Standard products shown. <br> Variants available on request. <br> Split star assemblies are shown <br> on relevant customer drawings where applicable. |
| Item | HexaShield Version <br> -1 |
| -2 | Back Nut <br> -3 |
| Tinel adapter assembly |  |
| Tinel-Lock ring for single braid |  |

## HexaShield Adapters for

ARINC 404/600 Connectors:

## Sizes 1, 2, 3 and 4

## Assemblies

| Item | Description |

## ARINC 600 Connectors

## Part Numbering of Ferrule

 Kits*HET-A-02X for small-size cable with SolderShield terminator

HET-A-03X for connection of unshielded cables ferrules with heat-shrinkable tubing (no shield)
HET-A-04X for large-size cables with SolderShield terminator
$\qquad$ Type of Plating:
B = Cadmium plated
C = Electroless nickel

HEX07-AX ferrule - solid blank for use when a HET-A is not needed
$\qquad$
Type of Plating:
B = Cadmium plated
C = Electroless nickel

[^0]
## EMC Performance

## Product Facts

■ Outperforms traditional pigtail termination, especially in HIRF performance
■ Withstands 10-kA peak current lightning transients of SAE AE4L-87-3

Transfer Impedance

HexaShield size: 23
Cable:
TE 5024H8424
(one cable installed)
Test method: CEI 96-1

## Protection Level

Generalized system performance (Actual system performance in any one test method may differ.)

The Raychem spin lock variable angle backshell enables straight, $45^{\circ}$ and $90^{\circ}$ cable terminations with the same part. The connector backshell swivelling body rotates around the axis of the cable bundle and locks in position, minimizing stress on the wire bundle and providing more robust strain relief than other termination systems.

## Product Facts

- Variable angle backshell enables straight, $45^{\circ}$ and $90^{\circ}$ cable terminations with the same part
■ High performance, low resistance shield termination provided by the proven Tinel-Lock ring system or bandstrap
$■$ Sealed termination achieved via a standard heatshrinkable molded shape and adhesive system
$\square$ Available in a variety of material and plating options
■ Saddle clamp strain relief or heat-shrinkable molded shape provides strain relief and sealing

## Raychem Spin Lock Variable Angle Backshell

## Application Tooling

RH-3960-1 TINEL-KIT-120V or AD-5000-TINEL-ASSY (240v)
Torque Wrench
Heat Gun (if using heatshrinkable molded part version)

## Applications

Military and Commercial Aerospace
Military Ground Systems
Military Marine
Commercial Ships and Off-
Shore Marine

## Materials

Aluminum with Electroless
Nickel or Cadmium over
Electroless Nickel or Zinc
Nickel plating

Standards \& Specs
Application Specification:
MIP-103-1 (Installation Procedure, Saddle Clamp Strain Relief)

MIP-103-2 (Installation Procedure, Molded Part Strain Relief)
Product Specification: MPS-103
Additional Documents: SLC40, SLC41, SLC54, SLM40, SLM41, SLM54, CH00-0250-019

## Electrical/Mechanical

| Title | Requirement | Passing Criteria |
| :---: | :---: | :---: |
| Examination of product | MPS-103 3.3.1 | Meet drawing dimension |
| DC Resistance | MPS-103 3.3.2 | DC Resistance $<2.5 \mathrm{~m} \Omega$ |
| Salt Spray | MPS-103 3.3.3 | Exposure of basis metal: <br> Non-critical area $<0.1 "$ <br> Critical area $<.025 "$ |
| Vibration (Category 3B) | MPS-103 3.3.4 | Must pass visual and DC Resistance criteria |
| Shock (Category 3B) | MPS-103 3.3.5 | Must pass visual and DC Resistance criteria |
| Cable Pullout | MPS-103 3.3.6 | Cable Slippage <0.125" |
| Braid Retention | MPS-103 3.3.7 | DC Resistance <2.5 m $\Omega$ |
| Coupling Thread Strength | MPS-103 3.3.8 | No visible damage to threads, <br> coupling nut or anti-rotational teeth |
| DC Resistance | MPS-103 3.3.2 | DC Resistance <2.5m $\Omega$ |
| External Bending Moment | MPS-103 3.3.9 | No visible damage to adapter body, <br> threads, coupling nut or anti-rotational teeth |
| Post Test Examination | MPS-103 3.3.10 | Meet drawing dimensions |

*MPS-103 Requirements meet or exceed SAE-AMS-85049
