74ALVC04

Hex inverter

Rev. 4 — 30 April 2021 Product data sheet

1. General description

The 74ALVC04 is a hex inverter. This device is fully specified for partial power down applications using I_{OFF}. The I_{OFF} circuitry disables the output, preventing the potentially damaging backflow current through the device when it is powered down.

Schmitt-trigger action at all inputs makes the circuit tolerant for slower input rise and fall times.
