

Precision Devices DLI mmWave Solutions

Moving to mmWave brings about new filtering challenges.

Shrinking Wavelengths

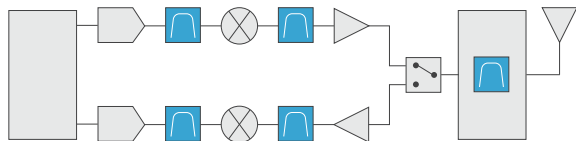

At 700MHz, the wavelength in free space is about 430mm, and at 2.6GHz, wavelengths are 115mm. Yet at 39GHz, wavelengths are only 7.7mm.

Reduced Size of the RF Front End

As wavelength shrinks so do antenna sizes, and for arrays to avoid diffraction effects, antenna spacing needs to be similarly shrunk. Filters in RF front ends need to be compact.

Increase In Number of RF Paths RF Front End

The enabling technologies for mmWave, Beam Steering and MIMO, rely on arrays of antennas, which in turn rely on arrays of RF paths further necessitating compact filtering components.

TECHNOLOGY	LTE Macro RRH
FREQUENCY	2.6GHz
CLOSE TO ANTENNA	Cavity Filter
RF SECTION	SMT RF Filters
IF SECTION	SMT IF Filters

Increased Temperature

In dense board environments temperatures rise, and front ends will need to operate at increased temperature and with inherent temperature stability.

Increased Need for Performance Repeatability

High frequency circuits are sensitive to variations in performance from part to part. Repeatability in filter component performance is key to avoid costly 'set at test' scenarios.

Ever Present Need to Perform

Filter components for the mmWave RF front end need to encompass all of these factors, and they still need to perform to ensure the best spectral efficiency and rejection possible.

TECHNOLOGY	5G mmWave Beamforming
FREQUENCY	28 & 39GHz
CLOSE TO ANTENNA	SMT RF Filters
RF SECTION	SMT RF Filters
IF SECTION	SMT IF Filters

Knowles Precision Devices meet the **5G mmWave filter** challenge through our **DLI filter technology**.

Small Size

Filter size reduction of up to 20x

High Repeatability

Precise manufacturing = No tuning

High Performance

Very broad band, high rejection and low insertion loss

Temperature Stable

Stable operation from -55°C to +125°C
