

**High Performance, Hall Effect-Based  
Current Sensor IC with a Low-Resistance Conductor  
5A/10A/20A/25A/30A/40A/50A series**

---

#### **FEATURES**

- ◆ Zero current output voltage is 50%VCC
- ◆ Current sensing range available: 5A/10A/20A/25A/30A/40A/50A
- ◆ High isolation and withstand voltage (3500V<sub>RMS</sub> isolation voltage between pins 1-4 and 5-8)
- ◆ Less power loss, internal conductor's resistance is 0.9mΩ
- ◆ High bandwidth, up to 250KHz
- ◆ 1.2μs output rise time in response to step input current
- ◆ Total output error ±0.5% at T<sub>a</sub>=25°C and ±3% at T<sub>a</sub>=-40~125°C
- ◆ Tokmas ® patented temperature compensation
- ◆ Outputs desensitized to mechanical stress
- ◆ Differential Hall structure, strong resistance to external magnetic interference
- ◆ ESD (HBM) 4000V
- ◆ Operating ambient temperature: -40~125°C

#### **APPLICATIONS**

- ◆ Motor controller
- ◆ Load detection and management
- ◆ Switch-mode power supplies
- ◆ Over-current fault protection
- ◆ Other applications requiring current detection

**FUNCTION BLOCK DIAGRAM**

**ORDERING INFORMATION**

| Part No.          | SENS. (mV/A) | Package | Packing Form             |
|-------------------|--------------|---------|--------------------------|
| CI5930-5A         | 400          | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-10A        | 200          | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-20A        | 100          | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-25A        | 80           | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-30A        | 67           | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-40A        | 50           | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-50A        | 40           | SOP8    | tape reel, 2000 pcs/reel |
| CI5930-XXA(Note1) | -            | SOP8    | tape reel, 2000 pcs/reel |

Note 1: When XXA is within the range of 50A, customers can customize the range according to their needs.

## PINOUT DIAGRAM

SOP8 Package

| Name | Number | Description       | Name | Number | Description                          |
|------|--------|-------------------|------|--------|--------------------------------------|
| IP+  | 1      | Current Sampled + | GND  | 5      | Ground                               |
| IP+  | 2      | Current Sampled + | VZCR | 6      | Zero Current Reference Signal Output |
| IP-  | 3      | Current Sampled - | OUT  | 7      | Analog Voltage Output                |
| IP-  | 4      | Current Sampled - | VCC  | 8      | Power Supply                         |

## ABSOLUTE MAXIMUM RATINGS

| Parameter                             | Symbol            | Value               | Unit |
|---------------------------------------|-------------------|---------------------|------|
| Power Supply                          | $V_{CC}$          | 7                   | V    |
| Output Voltage                        | $V_{OUT}$         | -0.3~ $V_{CC}$ +0.3 | V    |
| Output Source Current                 | $I_{OUT, SOURCE}$ | 6                   | mA   |
| Output Sink Current                   | $I_{OUT, SINK}$   | 30                  | mA   |
| Input current peak current (3 s)      | $I_{PEAK}$        | 100                 | A    |
| Input current continuous current      | $I_{CON}$         | 40                  | A    |
| Isolation Voltage                     | $V_{ISO}$         | 3500                | VAC  |
| Operating Ambient Temperature         | $T_a$             | -40~125             | °C   |
| Junction Temperature                  | $T_J$             | 165                 | °C   |
| Storage Temperature                   | $T_s$             | -55~150             | °C   |
| Magnetic Flux Density                 | B                 | Not Limited         | mT   |
| Electrostatic Discharge Voltage (HBM) | ESD(HBM)          | 4000                | V    |

**Note:** Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

## ISOLATION CHARACTERISTICS

| Parameter                           | Symbol     | Test Conditions  | Value | Unit      |
|-------------------------------------|------------|--|-------|-----------|
| Withstand isolation voltage         | $V_{ISO}$  | Test method: 50 / 60Hz, 1min                               | 3500  | $V_{RMS}$ |
|                                     | $V_{TEST}$ | t = 1s (100% production)                                   | 3900  | $V_{RMS}$ |
| Working voltage of basic insulation | $V_{WFSI}$ | Basic insulation   | 600   | $V_{PK}$  |
|                                     |            | UL standard 62368-1:2014                                   | 424   | $V_{RMS}$ |
| Clearance                           | $D_{cl}$   | minimum distance through air from IP leads to signal leads | 3.8   | mm        |

**Continued:**

| Parameter   | Symbol             | Test Conditions  | Value | Unit             |
|---|--------------------|--|-------|------------------|
| Maximum repetitive peak isolation voltage         | V <sub>IORM</sub>  | AC voltage (bipolar)   | 600   | V <sub>PK</sub>  |
| Maximum working isolation voltage                 | V <sub>IOWM</sub>  | AC voltage (sine wave)   | 424   | V <sub>RMS</sub> |
|   |                    | DC voltage   | 600   | V <sub>DC</sub>  |
| Maximum transient isolation voltage               | V <sub>IOTM</sub>  | Test method: t = 60s (qualification)                               | 4949  | V <sub>PK</sub>  |
|   | V <sub>TEST</sub>  | t = 1s (100% production)   | 5515  |                  |
| Maximum surge isolation voltage ( <b>Note 1</b> ) | V <sub>IOSM</sub>  | Tested 1.2us (rise) / 50us (width)<br>One time                     | 7000  | V <sub>PK</sub>  |
| Surge Current ( <b>Note 2</b> )                   | I <sub>SURGE</sub> | Tested in compliance to IEC 61000-4-5<br>8μs (rise) / 20μs (width) | 7.5   | kA               |

**Note1:** Testing is carried out in air to determine the intrinsic surge immunity of the isolation barrier.

**Note2:** Certification pending.

**RECOMMENDED OPERATING CONDITIONS**

| Parameter                                     | Symbol  | Min. | Max. | Unit            |
|---|---|------|------|-----------------|
| Input voltage ( <b>Note 1</b> )               | V <sub>IN+</sub> , V <sub>IN-</sub> ( <b>Note 1</b> ) | -600 | 600  | V <sub>PK</sub> |
| Input current (DC / AC RMS) ( <b>Note 2</b> ) | I <sub>P</sub>  | -50  | 50   | A               |
| Power Supply                                  | V <sub>CC</sub>                                       | 4.5  | 5.5  | V               |
| Operation Temperature                         | T <sub>A</sub>  | -40  | 125  | °C              |

**Note 1:** Vin +, VIN – refers to the voltage of current input pins IP + and IP -, relative to pin 5 (GND).

**Note 2:** Decrease due to higher ambient temperature.

**ELECTRICAL PARAMETERS** (T<sub>a</sub>=25°C and VCC=5V, unless otherwise specified)

| Parameter                       | Symbol                   | Conditions                                  | Min.  | Typ.  | Max.  | Unit |
|---------------------------------|--------------------------|---|-------|-------|-------|------|
| Power Supply                    | V <sub>CC</sub>          | -   | 4.5   | -     | 5.5   | V    |

**TYPICAL APPLICATION CIRCUITS**

Typical Output Application

Signal Attenuation Circuit

Peak Current Detection

Over Current Fault Latch

Rectifier output, instead of current transformer application

Zero Migration Application

## TYPICAL APPLICATION CIRCUITS

Application of single source zero shift with unidirectional current

**Note:** the output current of IZCR is < 0.4mA. It is suggested that 0.3mA should be reserved in design

Gain amplifier application

**Note:** output direction of VOUT

## Function Description

The CI5930 device is a precision current sensor based on Hall sensor. It has 424V<sub>RMS</sub> basic isolated working voltage, less than 3% full scale error and zero current reference signal output in the whole temperature range, which can realize unidirectional or bidirectional current detection. The input current flows through a wire between isolated input current pins, which has a resistance of 0.9 mΩ at room temperature to reduce insertion loss. The magnetic field generated by the input current is sensed by Hall sensor and amplified by precise signal chain. It can be used for AC and DC current measurement with a bandwidth of 250kHz. The measuring current is 5-50A. There are 7 kinds of Current sensing range to choose. It can work under single power supply of 4.5V to 5.5V. CI5930 is optimized for high accuracy and temperature stability, compensating for misalignment and sensitivity over the entire range.

The input current of CI5930 flows through the primary side of the package through IP + and IP - pins, the current flowing through the chip generates a magnetic field proportional to the input current and is measured by an isolated Precision Hall sensor IC. Compared with other current measurement methods, the low impedance lead frame path reduces power consumption and does not require any external devices on the primary side. In addition, the internal integrated differential common mode suppression circuit can make the chip output not affected by external interference magnetic signal, and only measure the magnetic field generated by the input current, so as to suppress the interference of external magnetic field.

The typical resistance of the primary current input conductor at 25 ° C is 0.9 mΩ. The lead frame is made of copper. The temperature coefficient of the input wire is positive, and the wire resistance increases with the increase of temperature. The typical temperature coefficient is 3300 ppm/° C. For every 100 ° C increase in temperature, the primary side resistance will increase by 33%.

## Input Current

In use, the primary side of the chip (package pins 1-4) is connected in series at any position in the whole circuit. The input current flowing from IP + (package pins 1-2) to IP - (package pins 3-4) is positive, otherwise it is negative. Do not shunt resistors between IP + and IP -, unless there are very special reasons - such as minimizing insertion loss - which will reduce the current flowing through the chip, and the wire resistance will also be affected by temperature drift, which requires external temperature and precision correction of the whole system.

## Output Characteristic

The static output point (IP = 0A) of CI5930 is VCC / 2.

When the current increases, the V<sub>OUT</sub> increases until the saturation voltage of the output operational amplifier (VCC – rail voltage); when the current decreases, the V<sub>OUT</sub> decreases until the saturation voltage (GND + rail voltage) of the Output Op Amp. Crosschip ensures the accuracy and linearity of V<sub>OUT</sub> in the range of 0.5 ~ 4.5V. In order to ensure the consistency of mass manufacturing, there is a certain margin in this range, but it is not recommended for customers to use this margin.

When the input current exceeds the range, the output of V<sub>OUT</sub> is close to the rail voltage of the power supply. When the input current does not exceed the tolerance limit of the chip, the voltage will always be maintained. After the input current returns to the range, the output of V<sub>OUT</sub> will return to normal without any damage to the chip.

| Product Name | Input Current | Sensitivity<br>(mV/A) | Calculation Formula (Note 1)                                    |
|--------------|---------------|-----------------------|---|
| CI5930-5A    | -5A ~ +5A     | 400                   | V <sub>OUT</sub> = VCC / 2 + 0.400 × I <sub>P</sub> (A).....(V) |
| CI5930-10A   | -10A ~ +10A   | 200                   | V <sub>OUT</sub> = VCC / 2 + 0.200 × I <sub>P</sub> (A).....(V) |
| CI5930-20A   | -20A ~ +20A   | 100                   | V <sub>OUT</sub> = VCC / 2 + 0.100 × I <sub>P</sub> (A).....(V) |
| CI5930-25A   | -25A ~ +25A   | 80                    | V <sub>OUT</sub> = VCC / 2 + 0.080 × I <sub>P</sub> (A).....(V) |
| CI5930-30A   | -30A ~ +30A   | 67                    | V <sub>OUT</sub> = VCC / 2 + 0.067 × I <sub>P</sub> (A).....(V) |
| CI5930-40A   | -40A ~ +40A   | 50                    | V <sub>OUT</sub> = VCC / 2 + 0.050 × I <sub>P</sub> (A).....(V) |
| CI5930-50A   | -50A ~ +50A   | 40                    | V <sub>OUT</sub> = VCC / 2 + 0.040 × I <sub>P</sub> (A).....(V) |

**Note:** the formula is only applicable to DC current calculation. When AC current is applied, pay attention to I<sub>PEAK</sub> = 1.414 × I<sub>RMS</sub> and the positive & negative current direction.

### Relationship between Package Temperature & Input Current

Input Current (IP) vs. Package temperature

Note: Based on the demo board test, for specific applications, it is necessary to strengthen the heat dissipation according to the actual application scenario or select the board with high Tg.

For example: Temperature tests shall be considered for the specific installation conditions in end system which needs a cooling system that can provide wind speeds of at least 10.8 m/s.

Thickness: 1.6mm, FR-4 double-sided plate, 2oz copper foil

total 1200m<sup>2</sup>

Test environment: open environment, stagnant air
