**General Description**

TS1117B are high performance positive voltage regulators are designed for use in applications requiring low dropout performance at full rated current, Additionally, TS1117B provides excellent regulation over variations due to changes in line, load and temperature. Outstanding features include low dropout performance at rated current, fast transient response, internal current limiting and thermal shutdown protection of the output device. TS1117B are three terminal regulators with fixed and adjustable voltage options available in popular packages.

**Features**

- Low Dropout Performance 1.5V max.
- Full Current Rating Over Line and Temperature
- Fast Transient Response
- Built-in thermal shutdown
- Output Current Limit
- Line Regulation Typical 0.2%
- Load Regulation Typical 0.05%
- Low-ESR Ceramic Capacitor (MLCC) Required for Stability.
- Good Ripple Rejection

Output Current Limit	$V_{IN} - V_{OUT} = 1.5V$	1.1	--	--	A
Temperature Stability	$I_o=10mA,$	--	0.5	--	%
Ripple Rejection	$F=120Hz, I_o=1A, C_{OUT}=25\mu F, V_{IN}=V_{out}+3V$	--	60	70	dB

Note 1: See thermal regulation specification for changes in output voltage due to heating effects. Line and load regulation are measured at a constant junction temperature by low duty cycle pulse testing. Load regulation is measured at the output lead = 1/18" from the package.

Note 2: Line and load regulation are guaranteed up to the maximum power dissipation of 15W. Power dissipation is determined by the input / output voltage difference and the output current. Guaranteed maximum power dissipation will not be available over the full input / output voltage range.

Note 3: Quiescent current is defined as the minimum output current required to maintain the regulation.

Note 4: The Output Capacitor does not have a theoretical upper limit and increasing its value will increase stability  $C_{OUT}=100\mu F$  or more is typical for high current regulator design.
