

30V N-Channel Enhancement Mode MOSFET

Description

The NP100N03D6 uses Trench technology that is uniquely optimized to provide the most efficient high frequency switching performance. Both conduction and switching power losses are minimized due to an extremely low combination of $R_{DS(ON)}$ and Q_g . This device is ideal for high-frequency switching and synchronous rectification.

General Features

- ◆ $V_{DS} = 30V$, $I_D = 100A$
 $R_{DS(ON)}(Typ.) = 3.4\ m\Omega$ @ $V_{GS} = 10V$
 $R_{DS(ON)}(Typ.) = 5.1\ m\Omega$ @ $V_{GS} = 4.5V$
- ◆ Very low on-resistance $R_{DS(on)}$
- ◆ 150 °C operating temperature
- ◆ 100% UIS tested

Application

- ◆ Synchronous Rectification in DC/DC and AC/DC Converters
- ◆ Industrial and Motor Drive applications

Thermal Characteristics

Parameter	Symbol	Typ	Max	Unit
Maximum Junction-to-Lead	Steady-State R _{θJC}	1	1.5	°C/W

The value of R_{qJA} is measured with the device mounted on 1 in 2 FR-4 board with 2oz. Copper, in a still air environment with T_A=25°C. The value in any given application depends on the user's specific board design. The current rating is based on the t ≤ 10s thermal resistance rating.

The R_{qJA} is the sum of the thermal impedance from junction to lead R_{qJL} and lead to ambient.
