## Low Power Half-Duplex RS-485 Transceivers

FEATURES

- +5V Only
- Low Power BiCMOS
- Driver / Receiver Enable
- Slew Rate Limited Driver for Low EMI (SP483)
- Low Power Shutdown mode (SP483)
- RS-485 and RS-422 Drivers/Receivers

## DESCRIPTION

The SP483 and SP485 are a family of half-duplex transceivers that meet the specifications of RS-485 and RS-422. Their BiCMOS design allows low power operation without sacrificing performance. The SP485 meets the requirements of RS-485 and RS-422 up to 5 Mbps . Additionally, the SP483 is equipped with a low power Shutdown mode. The SP483 is internally slew rate limited to reduce EMI and can meet the requirements of RS-485 and RS-422 up to 250 kbps .

SP483 and SP485

## ABSOLUTE MAXIMUM RATINGS

These are stress ratings only and functional operation of the device at these ratings or any other above those indicated in the operation sections of the specifications below is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.

Input Voltages
Logic........................ -0.3 V to $(\mathrm{Vcc}+0.5 \mathrm{~V})$
Drivers.................. 0.3 V to $(\mathrm{Vcc}+0.5 \mathrm{~V})$
Receivers................................-15V

Outputs
Logic.........................-0.3V to (Vcc + 0.5V)
Drivers.............................................+/-15V
Receivers..................-0.3V to (Vcc + 0.5V)
Receiver Output Current...............+/-95mA
Storage Temperature........................ $65^{\circ} \mathrm{C}$ to $+150^{\circ} \mathrm{C}$
Power Dissipation
8-pin NSOIC
.500 mW

## ELECTRICAL CHARACTERISTICS

$\mathrm{T}_{\text {MIN }}$ to $\mathrm{T}_{\text {max }}$ and $\mathrm{V}_{\text {cC }}=5 \mathrm{~V}+/-5 \%$ unless otherwise noted.

Figure 7. Receiver Propagation Delays

Figure 8. Receiver Enable and Disable Times

The SP483 and SP485 are half-duplex differential transceivers that meet the requirements of RS-485 and RS-422. Fabricated with an Exar proprietary BiCMOS process, this product requires a fraction of the power of older bipolar designs.

The RS-485 standard is ideal for multi-drop applications and for long-distance interfaces. RS-485 allows up to 32 drivers and 32 receivers to be connected to a data bus, making it an ideal choice for multi-drop applications. Since the cabling can be as long as 4,000 feet, RS-485 transceivers are equipped with a wide ( -7 V to +12 V ) common mode range to accommodate ground potential differences. Because RS-485 is a differential interface, data is virtually immune to noise in the transmission line.

## Drivers <br> SP483 and SP485

The driver outputs of the SP483 and SP485 are differential outputs meeting the RS-485 and RS-422 standards. The typical voltage output swing with no load will be 0 Volts to +5 Volts. With worst case loading of $54 \Omega$ across the differential outputs, the drivers can maintain greater than 1.5 V voltage levels. The drivers of the SP483 and SP485 have an enable control line which is active HIGH. A logic HIGH on DE (pin 3) will enable the differential driver outputs. Alogic LOW on the $\mathrm{DE}($ pin 3 ) will tri-state the driver outputs.

The transmitters of the SP485 will operate up to at least 5Mbps. The SP483 has internally slew rate limited driver outputs to minimize EMI. The maximum data rate for the SP483 driver is 250 kbps .

## Receivers <br> SP483 and SP485

The SP483 and SP485 receivers have differential inputs with an input sensitivity as low as $\pm 200 \mathrm{mV}$. Input impedance of the receivers is typically $15 \mathrm{k} \Omega$ ( $12 \mathrm{k} \Omega$ minimum). A wide common mode range of -7 V to +12 V allows for large ground potential differences between systems. The receivers of the SP483 and SP485 have a tri-state enable control pin. A logic LOW on $\overline{R E}$ (pin 2) will enable the receiver, a logic HIGH on RE (pin 2) will disable the receiver.

The receiver for the SP485 will operate up to at least 10Mbps. The SP483 receiver is rated for data rates up to 250 kbps . The receiver for each of the three devices is equipped with the fail-safe feature. Fail-safe guarantees that the receiver output will be in a HIGH state when the input is left unconnected and floating.

## Shutdown Mode SP483

The SP483 is equipped with a Shutdown mode. To enable the shutdown state, both driver and receiver must be disabled simultaneously. A logic LOW on DE (pin 3) and a Logic HIGH on RE (pin 2) will put the SP483 into Shutdown mode. In Shutdown, supply current will drop to typically $1 \mu \mathrm{~A}$.

ORDERING INFORMATION

| Part Number | Temperature Range | Package | Package Method | Lead-Free |
| :--- | :---: | :---: | :---: | :---: |
| SP483 | $0^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tube | Yes |
| SP483CN-L | $0^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tape and Reel | Yes |
| SP483CN-L/TR | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tape and Reel | Yes |
| SP483EN-L/TR | $0^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tube | Yes |
| SP485 | $0^{\circ} \mathrm{C}$ to $+70^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tape and Reel | Yes |
| SP485CN-L | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tube | Yes |
| SP485CN-L/TR | $-40^{\circ} \mathrm{C}$ to $+85^{\circ} \mathrm{C}$ | 8-pin NSOIC | Tape and Reel | Yes |
| SP485EN-L |  |  |  |  |

NOTE: For more information about part numbers, as well as the most up-to-date ordering information and additional information on environmental rating, go to www.maxlinear.com/SP483 and www.maxlinear.com/SP485.

## REVISION HISTORY

| DATE | REVISION | DESCRIPTION |
| :---: | :---: | :--- |
| $07 / 28 / 04$ | -- | Legacy Sipex Datasheet |
| $07 / 14 / 10$ | 1.0 .0 | Convert to Exar Format. Update ordering information as a result of discontinued <br> Lead type package options per PDN 081126-01. Remove all options and <br> reference to SP481; Part is EOL. Remove "GND" entry from Minimum <br> column of SP483/485 driver DC Characteristic paramter "Differential output <br> voltage - Unloaded". |
| June 2011 | 1.0 .1 | Remove Driver Short Circuit Current minimum. Change Vcc ABS MAX Rating <br> from +12V to +7V. Add 12k ohm minimum value to receiver Input Resistance. <br> Change SP485 receiver propagation delay MIN and TYP to 20 and 45ns <br> respectively, receiver Enable and Disable TYP and MAX to 45 and 70ns <br> respectively. Remove SP483CS-L and SP483ES-L ordering part number per <br> PDN 110510-01. |
| August 2020 | 1.0 .2 | Update to MaxLinear logo. Update Ordering Information. <br> February 4, 2022 <br> 1.0 .3 <br> Updated: <br> - In the "Absolute Maximum Ratings" section, replaced "Output Voltages" <br> with "Outputs". <br> Added: <br> - In the "Absolute Maximum Ratings" section, "Receiver Output Current" <br> parameter. <br> Removed: <br> - In the "Electrical Characteristics" section, "Short-Circuit Current" <br> parameter. |
