

Precision micropower shunt voltage reference

Datasheet - production data

Description

The LM4041 is a micropower shunt voltage reference, providing a stable 1.225 V output voltage, with an initial accuracy of 0.1% @ 25 °C and a low temperature coefficient. Available in SOT323-5L and SOT23-3L surface mount packages, it can be designed in applications where space saving is a critical issue. The low operating current is a key advantage for power restricted designs. In addition, the LM4041 is very stable and can be used in a broad range of application conditions.

Features

- Fixed 1.225 V typical output voltage
- Ultra low operating current: 40 μ A at 25 °C
- High precision: +/- 0.1% @ 25 °C (0.2%, 0.5% and 1% versions are also available)
- Stable when used with capacitive loads
- Industrial (- 40 to+ 85 °C) and Extended (- 40 to +125 °C) temperature range versions available
- 100 ppm/°C maximum temperature coefficient
- Available in SOT23-3L and SOT323-5L packages

Applications

- Computers
- Battery chargers
- Switch mode power supply
- Battery operated equipment
- Data acquisition systems
- Energy management
- Instrumentation

2. The average temperature coefficient is defined as: $10^6 \times \{\max(\Delta V_k) / [V_{k@25^\circ\text{C}} \times (T_{max} - T_{min})]\}$ [ppm/°C].

Note: Limits are 100% production tested at 25 °C. Limits over temperature are guaranteed through correlation and by design.
