

# MAX14756/MAX14757/ MAX14758

## Quad SPST +70V Analog Switches

### General Description

The MAX14756/MAX14757/MAX14758 are analog switches with a low on-resistance of 10Ω (max) that conduct equally well in both directions. All devices have a rail-to-rail analog-signal range. They operate with a single +10V to +70V supply in unipolar applications or ±35V dual supplies in bipolar applications. The bipolar supplies can be offset and do not have to be symmetrical.

The MAX14756 is a quad normally closed (NC) single-pole/single-throw (SPST) switch, the MAX14757 is a quad normally open (NO) SPST switch, and the MAX14758 has two NO and two NC SPST switches. These switches have 5Ω (typ) on-resistances and low on-leakage currents of 0.01nA (typ). The on-resistance flatness is 0.004Ω (typ).

The devices are suitable for a multitude of analog signal routing and switching applications. They are specified over an extended temperature range of -40°C to +85°C, but can be operated up to +125°C with elevated leakage currents.

### Applications

- Industrial Control Systems
- Instrumentation
- Battery Management
- Environmental Control Systems
- Medical Systems
- ATE System
- Audio Signal Routing/Switching

### Features

- Single-Supply Operation from +10V to +70V
- Bipolar-Supply Operation Up to ±35V
- On-Resistance of 10Ω (max)
- R<sub>ON</sub> Flatness of 0.004Ω (typ)
- 2.5nA (max) Off-Leakage Currents at +85°C
- Overvoltage/Undervoltage Clamping Through Protection Diodes
- 500μA (typ) Supply Current
- TSSOP 16-Pin Package
- -40°C to +85°C Ambient Temperature Range
- Functionally Compatible to DG411, DG412, and DG413
- Functionally Operational Up to +125°C

### Ordering Information

PART	FUNCTION	TEMP RANGE	PIN-PACKAGE
MAX14756EUE+	Quad NC SPST	-40°C to +85°C	16 TSSOP
MAX14757EUE+	Quad NO SPST	-40°C to +85°C	16 TSSOP
MAX14758EUE+	Dual NO + NC SPST	-40°C to +85°C	16 TSSOP

+Denotes a lead(Pb)-free/RoHS-compliant package.

### Functional Diagrams

### Absolute Maximum Ratings

V <sub>DD</sub> to V <sub>SS</sub> .....	-0.3V to +72V
V <sub>SS</sub> to GND.....	-36V to +0.3V
V <sub>L</sub> , EN <sub>-</sub> to GND.....	-0.3V to the lesser of (+12V, V <sub>DD</sub> + 0.3V)
A <sub>-</sub> , B <sub>-</sub> to V <sub>SS</sub> .....	-0.3V to (V <sub>DD</sub> + 2V) or 100mA (whichever occurs first)
Continuous Current into A <sub>-</sub> , B <sub>-</sub> .....	±100mA

Continuous Power Dissipation (T <sub>A</sub> = +70°C)	
TSSOP (derate 11.1mW/°C above +70°C) .....	889mW
Operating Temperature Range.....	-40°C to +85°C
Storage Temperature Range.....	-65°C to +150°C
Junction Temperature.....	+150°C
Lead Temperature (soldering, 10s) .....	+300°C
Soldering Temperature (reflow).....	+260°C

### Package Thermal Characteristics (Note 1)

TSSOP

Junction-to-Ambient Thermal Resistance (θ <sub>JA</sub> ) .....	90°C/W
Junction-to-Case Thermal Resistance (θ <sub>JC</sub> ).....	27°C/W

**Note 1:** Package thermal resistances were obtained using the method described in JEDEC specification JESD51-7, using a four-layer board. For detailed information on package thermal considerations, refer to [www.maximintegrated.com/thermal-tutorial](http://www.maximintegrated.com/thermal-tutorial).

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

### Electrical Characteristics—Dual Supplies

(V<sub>DD</sub> = +35V, V<sub>SS</sub> = -35V, V<sub>GND</sub> = 0V, V<sub>L</sub> = +3.3V, T<sub>A</sub> = -40°C to +85°C, unless otherwise noted. Typical values are at T<sub>A</sub> = +25°C.)

PARAMETER	SYMBOL	CONDITIONS	MIN	TYP	MAX	UNITS
<b>POWER SUPPLY</b>

## Pin Configuration

## Pin Description

PIN	NAME	FUNCTION
1	A1	Terminal A of Switch 1
2	B1	Terminal B of Switch 1
3	EN1	Enable Input of Switch 1. When EN1 is driven high, the switch's state (NO/NC) changes (see <a href="#">Table 1</a> , <a href="#">Table 2</a> , and <a href="#">Table 3</a> ).
4	V <sub>SS</sub>	Negative Supply Voltage. Bypass V <sub>SS</sub> to GND with a 1μF ceramic capacitor (100V rated) as close as possible to the pin.
5	GND	Ground
6	EN4	Enable Input of Switch 4. When EN4 is driven high, the switch's state (NO/NC) changes (see <a href="#">Table 1</a> , <a href="#">Table 2</a> , and <a href="#">Table 3</a> ).
7	B4	Terminal B of Switch 4
8	A4	Terminal A of Switch 4
9	A3	Terminal A of Switch 3
10	B3	Terminal B of Switch 3
11	EN3	Enable Input of Switch 3. When EN3 is driven high, the switch's state (NO/NC) changes (see <a href="#">Table 1</a> , <a href="#">Table 2</a> , and <a href="#">Table 3</a> ).
12	V <sub>L</sub>	Logic Supply Voltage. Bypass V <sub>L</sub> to GND with a 1μF ceramic capacitor as close as possible to the pin.
13	V <sub>DD</sub>	Positive Supply Voltage. Bypass V <sub>DD</sub> to GND with a 1μF ceramic capacitor (100V rated) as close as possible to the pin.
14	EN2	Enable Input of Switch 2. When EN2 is driven high, the switch's state (NO/NC) changes (see <a href="#">Table 1</a> , <a href="#">Table 2</a> , and <a href="#">Table 3</a> ).
15	B2	Terminal B of Switch 2
16	A2	Terminal A of Switch 2

### Detailed Description

The MAX14756/MAX14757/MAX14758 are analog switches with low on-resistance of 10Ω (max) that conduct equally well in both directions. All devices have a rail-to-rail analog-signal range. They operate with a single +70V supply in unipolar applications or ±35V dual supplies in bipolar applications. The bipolar supplies can be offset and do not have to be symmetrical.

The MAX14756 is a quad NC SPST switch, the MAX14757 is a quad NO SPST switch, and the MAX14758 has two NO and two NC SPST switches. These switches have 5Ω (typ) on-resistances and low on-leakage currents of 5nA (max). The on-resistance flatness is 0.004Ω (typ). These devices are suitable for a multitude of analog-signal routing and switching applications, and are functionally operational up to +125°C with increased leakage currents.

### Applications Information

#### Low-Distortion Audio

The MAX14756/MAX14757/MAX14758 switches, having low  $R_{ON}$  and very low  $R_{ON}$  variation with signal amplitude, are well suited for low-distortion audio applications. The *Typical Operating Characteristics* section shows Total Harmonic Distortion (THD) vs. Frequency graphs for several signal amplitudes.

#### Current Through the Switches

The current flowing through every switch must be limited to ±50mA for normal operation. If the current exceeds this limit, an internal leakage current flows from the switch to  $V_{SS}$ . Larger input currents do not destroy the device, as long as the *Absolute Maximum Ratings* are not exceeded.

#### Input-Voltage Clamping

For applications that require input voltages beyond the supplies rails, the internal input diodes to  $V_{DD}$  and  $V_{SS}$  can be used to limit the input voltages. As shown in Figure 9, series resistors can be employed at the inputs to limit the currents flowing into the diodes during undervoltage and overvoltage conditions. Choose the limiting resistors such that the input currents are limited to  $I_{IN\_}(MAX) = 100mA$ . The values of the current-limit resistors can be calculated as the larger of  $R_{LIM+}$  and  $R_{LIM-}$ .

$$R_{LIM+} = \frac{V_{IN(MAX)} - V_{DD}}{I_{IN\_}(MAX)}$$

$$R_{LIM-} = \frac{V_{SS} - V_{IN(MIN)}}{I_{IN\_}(MAX)}$$

EN2	1	A2/B2	Closed
EN3	1	A3/B3	Closed
EN4	1	A4/B4	Open

During an undervoltage or overvoltage condition, the input impedance is equal to  $R_{LIM}$ . The additional power dissipation due to the fault currents needs to be calculated. During an overvoltage or undervoltage clamping condition on one switch input, the other switches of the MAX14756/MAX14757/MAX14758 operate normally.

#### Beyond-the-Rail Input

If input voltages are expected to go beyond the supply voltages, but within the absolute maximum supply voltages of the MAX14756/MAX14757/MAX14758, add two diodes in series with the supplies as shown in Figure 10.

Figure 9. Input Overvoltage and Undervoltage Clamping

Figure 10. Beyond-the-Rail Application

During undervoltage and overvoltage events, the internal diodes pull  $V_{DD}/V_{SS}$  supplies up/down. An advantage of this scheme is that the input impedance is high and currents do not flow through the MAX14756/MAX14757/MAX14758 during overvoltage and undervoltage events. The input voltages must be limited to the voltages specified in the *Absolute Maximum Ratings* section.
