Construction

A metal film is deposited onto a high quality ceramic former. Nickel-plated steel caps are force fitted to the former and termination wires are welded to the caps.

The resistor is adjusted to value by a helical cut in the film and the body is protected with a specially formulated epoxy coating.

Terminations

Material	100% tin plated over copper wire
Strength	The terminations meet the requirements of IEC 68.2.21.
Solderability	The terminations meet the requirements of IEC 115-1, Clause 4.17.3.2.

Marking

Type reference, TCR code, resistance value and tolerance code.

The resistance values conform to IEC 62.

Solvent Resistance

The body protection and marking are resistant to all normal industrial cleaning solvents suitable for printed circuits.

Application Notes

Matched Sets and Networks

Welwyn has many years experience in the supply of matched set of precision resistors

Resistors can be supplied matched for tolerance and TCR down to $\pm 0.02\%$ and ± 2 ppm/°C, either as separate resistors or pre-assembled and encapsulated within a plastic box.

The individual resistors within a set or module can be manufactured with a tolerance of $\pm 0.05\%$ and TCR of ± 5 ppm/°C.

A low inductance version is available at 1% tolerance. For low inductive version add suffix N.

Packaging

The standard method of packaging RC55 resistors is taped in ammo packs. Taped resistors on reel or loose packed components can also be supplied by special request. The standard packaging for RC65 and RC70 resistors is loose in boxes. By special request the RC65 components can also be supplied taped on reel or in ammo pack. In the case of tape packed components the usable lead length is reduced by the width of the tape.
