

Standard linear bushings

### Standard linear bushings, R0630 Open, no wiper seals

### Standard linear bushings, R0632 Open, with wiper seals

#### Design

- Hardened and machined outer sleeve
- Steel ball retainer
- Balls made of rolling bearing steel
- No wiper seals, come with integrated steel retaining rings; higher temperatures allowed with shaft diameters 12 and higher
- Integrated wiper seals for high contamination
- With locating hole for axial and radial securing (no locating hole for shaft diameters 12 and 16)

- 1) Minimum size in relation to  $\varnothing d$ .
- 2) The load ratings C and C<sub>0</sub> apply for the main load direction.

The dynamic load ratings are based on a total travel of 100,000 m.  
When based on 50,000 m, the C values in the table are multiplied by 1.26.

**⚠ Refer to the diagrams on page 99 for load in the direction of opening.**

Shaft diameters 12 and 16 must be installed as shown (inversely) in order to avoid lifting off the shaft. It is not possible to set a single linear bushing (slotted housing with adjusting screw) to zero clearance.
