

Low power dual bipolar operational amplifiers

Features

- Good consumption/speed ratio: only 200 μA for 2.1 MHz, 2 V/ μs
- Single (or dual) supply operation from +4 V to +44 V (± 2 V to ± 22 V)
- Wide input common mode voltage range including V_{CC-}
- Low level output voltage close to V_{CC-} : 100 mV typical
- Pin-to-pin compatible with standard dual operational amplifiers

Description

The MC3x172 series are dual bipolar operational amplifiers offering both low consumption (200 $\mu\text{A}/\text{Amp}$) and good speed (2.1 MHz, 2 V/ μs).

Moreover, the input common mode range extends down to the lower supply rail, allowing single supply operation from +4 V to +44 V.

1 Circuit schematics

Figure 1. Typical schematic diagram (1/2 MC33172/MC35172)

2 Absolute maximum ratings and operating conditions

Table 1. Absolute maximum ratings (AMR)

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	± 22	V
V_{id}	Differential input voltage	see note (1)	V
V_{in}	Input voltage	see note 1	V
	Output short-circuit duration	Indefinite	s
T_{oper}	Operating free-air temperature range MC33172 MC35172	-40 to 105 -55 to 125	$^{\circ}\text{C}$
R_{thja}	Thermal resistance junction to ambient ⁽²⁾ SO-8 DIP8	125 85	$^{\circ}\text{C}/\text{W}$
R_{thjc}	Thermal resistance junction to case ⁽²⁾ SO-8 DIP8	40 41	$^{\circ}\text{C}/\text{W}$
T_j	Junction temperature	150	$^{\circ}\text{C}$
T_{stg}	Storage temperature	-65 to 150	$^{\circ}\text{C}$
ESD	HBM: human body model ⁽³⁾	2	kV
	MM: machine model ⁽⁴⁾	200	V
	CDM: charged device model ⁽⁵⁾	1	kV
	Latch-up immunity	Class A	

1. Either or both input voltages must not exceed the magnitude of V_{CC} .
2. Short-circuits can cause excessive heating and destructive dissipation. Values are typical.
3. Human body model: A 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 k Ω resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
4. Machine model: A 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5 Ω). This is done for all couples of connected pin combinations while the other pins are floating.
5. Charged device model: all pins and the package are charged together to the specified voltage and then discharged directly to the ground through only one pin. This is done for all pins.

Table 2. Operating conditions

Symbol	Parameter	Value	Unit
V_{CC}	Supply voltage	± 2 to ± 22	V

3 Electrical characteristics

e_n	Equivalent input noise voltage ($F = 1kHz$)		29		$\frac{nV}{\sqrt{Hz}}$
THD	Total harmonic distortion		0.05		%
V_{O1}/V_{O2}	Channel separation		120		dB

4 Package information

In order to meet environmental requirements, STMicroelectronics offers these devices in ECOPACK[®] packages. These packages have a lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an STMicroelectronics trademark. ECOPACK specifications are available at: www.st.com.
