

Automotive quad Transil™ array for ESD protection

Datasheet – production data

Features

- 4 unidirectional Transil functions
- Low leakage current: I_R max. < 20 μ A at V_{RM}
- 400 W peak pulse power (8/20 μ s)

Benefits

- High EOS and ESD protection levels
- High integration
- Suitable for high density boards
- AEC-Q101 qualified

Complies with the following standards:

- ISO 10605: C = 150 pF, R = 330 Ω
 - 30 kV (air discharge)
 - 30 kV (contact discharge)
- ISO 10605: C = 330 pF, R = 330 Ω
 - 30 kV (air discharge)
 - 30 kV (contact discharge)
- ISO 7637-2
 - Pulse 1: $V_S = -100$ V
 - Pulse 2a: $V_S = +50$ V
 - Pulse 3a: $V_S = -150$ V
 - Pulse 3b: $V_S = +100$ V

Applications

Where ESD and EOS transient overvoltage protection in susceptible equipment is required, such as:

- Information - entertainment
- Signal communications
- Connectivity
- Comfort and convenience

Description

The ESDASCY devices are monolithic voltage suppressors designed to protect components which are connected to data and transmission lines against ESD.

They clamp the voltage just above the logic level supply for positive transients, and to a diode drop below ground for negative transient.

1 Characteristics

		ESDA14V2SC5Y, ESDA25SC6Y	300	
I_{PP}	Peak pulse current (8/20 μ s)	ESDA5V3SC6Y	22	A
		ESDA6V1SC6Y	18	
		ESDA14V2SC5Y	14	
		ESDA25SC6Y	7	
T_j	Operating junction temperature range		-40 to 150	$^{\circ}\text{C}$
T_{stg}	Storage temperature range		-65 to +150	$^{\circ}\text{C}$
T_L	Maximum lead temperature for soldering during 10 s		260	$^{\circ}\text{C}$

For a surge greater than the maximum values, the diode will fail in short-circuit.

5 Recommendation on PCB assembly

5.1 Solder paste

1. Use halide-free flux, qualification ROL0 according to ANSI/J-STD-004.
2. "No clean" solder paste recommended.
3. Offers a high tack force to resist component displacement during PCB movement.
4. Use solder paste with fine particles: powder particle size 20-45 μm .

5.2 Placement

1. Manual positioning is not recommended.
2. It is recommended to use the lead recognition capabilities of the placement system, not the outline centering.
3. Standard tolerance of ± 0.05 mm is recommended.
4. 3.5 N placement force is recommended. Too much placement force can lead to squeezed out solder paste and cause solder joints to short. Too low placement force can lead to insufficient contact between package and solder paste that could cause open solder joints or badly centered packages.
5. To improve the package placement accuracy, a bottom side optical control should be performed with a high resolution tool.
6. For assembly, a perfect supporting of the PCB (all the more on flexible PCB) is recommended during solder paste printing, pick and place and reflow soldering by using optimized tools.

5.3 PCB design preference

1. To control the solder paste amount, the closed via is recommended instead of open vias.
2. The position of tracks and open vias in the solder area should be well balanced. The symmetrical layout is recommended, in case any tilt phenomena caused by asymmetrical solder paste amount due to the solder flow away.

5.4 Reflow profile

Figure 16. ST ECOPACK® recommended soldering reflow profile for PCB mounting

Note: Minimize air convection currents in the reflow oven to avoid component movement.
