Note: 1. V terminals and G terminals are respectively connected internally.

When supplying power for I/O from communications connectors, power can be supplied to the sensor output devices from V and G terminals.

2. When using an inductive load (solenoid, valve etc.), either use one with an internal reverse electromotive force absorption diode or attach a diode externally.

# Precautions

Refer to the *CompoBus/S Operation Manual (W266)* before using the Unit.

## SENSOR CONNECTOR PIN ARRANGEMENT

SRT2-VID08S, SRT2-VID08S-1

SRT2-VOD08S, SRT2-VOD08S-1

Model	Cable conductor size
XS8A-0441	0.3 to 0.5 mm <sup>2</sup>
XS8A-0442	0.14 to 0.2 mm <sup>2</sup>

Note: The XS8A-0441 or XS8A-0442 Connector is not provided with the SRT2-VID or SRT2-VOD. Place an order for the connector separately.

### Cable Conductor Size Calculation Formula

Calculate the cable conductor size as follows.

The following information is given on each sensor cable:

Cable dia. (Number of conductors/Conductor dia.)

$$\text{Conductor size (mm}^2\text{)} = (\text{Conductor dia./2})^2 \times \pi \times \text{Number of conductors}$$

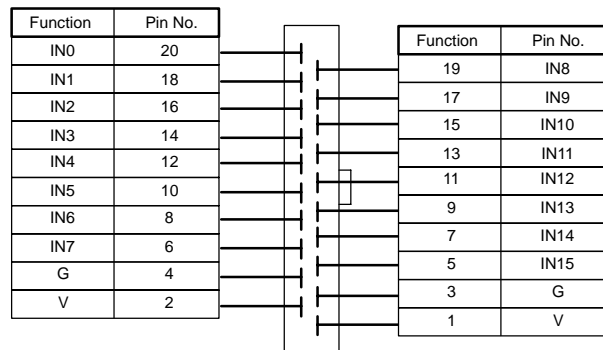

Example: E3S-A  
4 dia. (18/0.12)

$$\text{Conductor size (mm}^2\text{)} = (0.12/2)^2 \times 3.14 \times 18 \approx 0.20$$

The conductor size is 0.2 mm<sup>2</sup>. Therefore, use the XS8A-0442.
