Autonomous USB Type-C Passive Cable Marker

Description

The FUSB380C provides a small footprint solution for passive cable applications. 28 V Tolerant VCONN and CC provides VBUS shorting protection. One FUSB380C can be used in a VCONN through Type-C cable application or two FUSB380Cs can be used in each plug avoiding the high cost of routing VCONN through the Type-C cable. The FUSB380C offers industry leading VCONN operating range down to 2.4 V.

Features

- Integrated USB-PD 3.0 Protocol Layer and Device Policy Engines
- 5x Programmable for Different Cable Configurations
- USB PD 2.0 and 3.0 Certified
- Robust Design Features:
 - ◆ 28 V Tolerant CC and VCONN
 - ◆ Integrated Isolation Between VCONN1 and VCONN2
 - ◆ 2.4 V – 5.5 V VCONN Operation
- Field Programmable for Different Cable Configurations
- SOP' Signaling Support
- Automatic Ra Weakening to Reduce Power Consumption
- 12 Pin WLCSP (1.21 mm x 1.67 mm)
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

Applications

- Passive Cables

Functional Behaviour

VCONN Terminations

The FUSB380C device presents a R_A termination whenever the VCONNx pins are unpowered. Only the VCONNx pin that has a voltage in the valid range for $t_{VCONNStable}$ will be weakened to R_{A_WEAK} .

The function of R_{A_WEAK} is to discharge the voltage on VCONN to $V_{VCONNDischarge}$ within a maximum time of $t_{VCONNDischarge}$ and a maximum load of 10 μ F. The R_{A_WEAK} termination will be applied until VCONN voltage drops below the $V_{RARereconnect}$ threshold. Once this threshold is crossed R_A is reapplied.

Field Programmable Function

The FUSB380C can be programmed by the customer via Vendor Defined Messages. The user can re-program the device a maximum of 5 times.

The device's Discover Identity response can be fully customized for Passive cables, with or without Modal support.

The FUSB380C also offers the ability to program a Serial Number that can be read via a VDM Specific command.
