

Schmartboard Development Board for Texas Instruments MSP430, C2000 & Stellaris Cortex MS

Schmartboard Development for Texas Instruments MSP430, C2000 & Stellaris Cortex MS

This Texas Instruments Microcontroller Development SchmartModule supports almost all of the QFP, 48 and 64 pin T.I. microcontrollers in the MSP430, C2000, and Stellaris Cortex M3 product lines. This board is fully populated except for the TI MCU. You hand solder some headers and the MCU using our "EZ" technology, configure the jumpers for your T.I. part number and start programming. At a suggested retail of only \$30, no other T.I. development board can come close to giving you the flexibility and low cost of this product. This one board supports almost all of the 48 and 64 pin MCUs available in the MSP430, C2000, or Stellaris Cortex M3 product lines.
