HCF1305 High frequency, high current power inductors

Product features

- 12.5 mm x 12.5 mm x 5.0 mm surface mount package
- Ferrite core material
- Inductors designed for higher speed switch mode applications requiring low voltage and high current
- Design utilizes ferrite core with high DC bias
- resistance and low core loss $\,$ Inductance range from 0.47 μH to 4.7 μH
- Current range from 36.0 A to 10.4 A
- Frequency range 100 kHz to 1 MHz

Applications

- Next generation processors
- High current DC-DC converters
- VRM, multi-phase buck regulators
- PC Workstations, Routers, Servers
- Telecom soft switches
- Base stations

Environmental data

- Storage temperature range (component): -40 °C to +125 °C
- Operating temperature range: -40 °C to +125 °C (ambient plus self-temperature rise)
- Solder reflow temperature: J-STD-020 (latest revision) compliant

OCL: Open Circuit Inductance test parameters: 100 kHz, 0.1 Vrms, 0.0 Adc. OCL@-40 °C can be lower than OCL@+20 °C by 15% max.
 Irms: DC current for an approximate DT of 40 °C without core loss. Derating is necessary for AC currents. PCB layout, trace thickness and width, air-flow, and proximity of other heat generating components will affect the temperature rise. It is recommended that the temperature of the part not exceed +125 °C under worst case operating conditions verified in the ord particular particular temperature is a second particular temperature of the part not exceed +125 °C under worst case operating conditions verified in the ord particular temperature is a second particular temperature of the part not exceed +125 °C under worst case operating conditions verified in the ord particular temperature is a second particular temperature is a second particular temperature of the part not exceed +125 °C under worst case operating conditions verified in the ord particular temperature is a second particular temperatemente

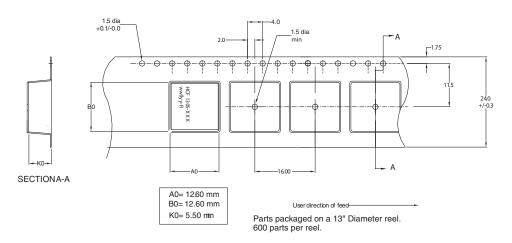

the end application.
isat1: Amperes Peak for approximately 30% rolloff (@+25 °C)
Isat2: Amperes Peak for approximately 30% rolloff (@+125 °C)

Dimensions- mm

Do not route traces or vias underneath the inductor

5) K-factor: Used to determine B p-p for core loss (see graph). B p-p = $K^*L^*\Delta I$ B p-p: (MT), K: (K factor from table), L: (Inductance in μ H), Δ I (Peak to peak ripple current in Amps).

Part number definition: HCF1305-XXX-R HCF1305 = Product code and size XXX = Inductance value in uH.

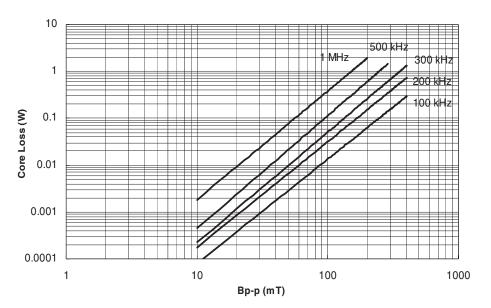

R = Decimal point. If no R is present, third character = #of zeros -R suffix indicates RoHS compliant
