#### INTRODUCTION

#### SENSORS AND SWITCHES

Honeywell offers a wide selection of products and technology capability for applications in medical devices and equipment; heating, ventilation, airconditioning and refrigeration; information technology; home appliances; motor control and automotive passenger cars. This catalogue contains a selection of our most popular, established product listings. To view our complete range of products, visit our web site at **www.honeywell.com**/ **sensing**.

#### How to use this catalogue

For each referenced listing, key specification parameters, descriptions and mounting drawing information are presented. These listings illustrate our capabilities while the specifications included allow easy differentiation between similar products. For products with no specific reference numbers, please contact your local Honeywell sales office.

There are, of course, many more product options available. Full product specification information may be accessed on our web site (*www.honeywell.com/sensing*). At the Home page enter the catalogue listing reference in the SEARCH box and click GO! This will take you directly to the interactive catalogue/specification search tables for this listing. Alternatively, select and click the interactive catalogue icon on the Home page and then choose a product category against which to do a specification search.

Also on the web site you can access installation instructions, application notes, Frequently Asked Questions (FAQs), selection guides and additional technical information.

#### Mounting dimensions

Mounting dimensions shown in each product section are for reference only. For exacting layout work, request an engineering drawing from your nearest Honeywell sales office. Where dual dimensions are shown on mounting drawings, the first or upper one is millimetres (mm) and the second or lower is inches (in). Where single dimensions are shown, they are millimetres (mm), unless otherwise stated.

#### To order these products

Simply contact your local Honeywell Distributor or your local Honeywell office. More information on Honeywell products and how to contact us can be found at *http://locator.micro.honeywell.com/*

Honeywell – delivering excellence

To assist in delivering the right products for our customers' applications, we listen to them to understand their needs. Using techniques such as "Voice of the Customer" and "Concept Engineering," we aim to deliver the products and solutions. As part of Honeywell we can use local knowledge and understanding combined with global expertise and resources to achieve this. We can deploy many key technologies to bring innovative solutions to customers' problems.

Our products are manufactured to work well and to last. We use Six Sigma Plus productivity to ensure this is the case. We have award winning manufacturing facilities around the world and recognised world class business excellence in manufacturing and supply chain management to deliver on time, anywhere in the world.

Our e-business approach offers instant access to product information, technical support and application knowledge through our Internet site. Check out our powerful new interactive catalogue that can search and find the right products for customers' needs and deliver a drawing ready for incorporation in a CAD system direct to your desk.

And of course, we manage our whole business for the benefit of our customers, using an acknowledged world-class business excellence approach that incorporates Six Sigma principles.

# **Pressure Sensors**

Compensated (26PC Series)

12 Vdc max. (24PC Series) 16 Vdc max. (26PC Series)

PCB; 1 x 4; 0.600 in (Type 6) PCB; 2 x 2; (Type 2) 1 x 4 with connector (Type 5)

Straight or flow through

-40 °C to 85 °C [-40 `°F to 185 °F]

10 Vdc typ.

Honeywell pressure sensors are small, low cost and reliable. They promote excellent repeatability, high accuracy and reliability under varying environmental conditions. In addition, they feature highly consistent operating characteristics from one sensor to the next and interchangeability without recalibration.

We offer three pressure sensor measurement types—absolute, differential and gage—including vacuum gage and bidirectional types. A wide variety of pressure ranges, along with both amplified and unamplified versions, are available.

Honeywell pressure sensors are best used in applications which require precision pressure measurement.

#### 24PC Series

| MEASUREMENT TYPE         | PRESSURE RANGE | REFERENCE |
|--------------------------|----------------|-----------|
| Gage/vacuum gage         | 1.0 psi        | 24PCAFA6G |
| Differential/vacuum gage | 5.0 psi        | 24PCBFA6D |
| Gage/vacuum gage         | 5.0 psi        | 24PCBFA6G |

# **Mass Airflow Sensors**

## AWM2000 Series

The AWM2000 Series microbridge mass airflow sensor is a passive device comprised of two Wheatstone bridges and has bidirectional sensing capability. The heater control circuit is required for operation per specifications. The sensing bridge supply circuit is also required for operation per specifications. These two circuits are not on board the package and must be supplied in the application. The differential amplifier is often a useful interface for the sensing bridge. It can be used to introduce gain and to voltage offsets to the sensor output.

Signal conditioning:Unamplified (-44.5 mVdc to 44.5 mVdc)Port style:StraightSensor resistance:5 k0hm

| FLOW/PRESSURE RANGE                | REFERENCE |
|------------------------------------|-----------|
| ±200 sccm                          | AWM2100V  |
| ±4.0 in H <sub>2</sub> O (10 mBar) | AWM2200V  |
| ±1000 sccm (1 SLPM)                | AWM2300V  |

Mass Airflow sensors contain a thin-film, thermally isolated bridge structure that consists of a heater and temperature sensing elements. The bridge structure promotes sensitivity and fast response to the flow of air or other gas over the chip.

State-of-the-art chip design and manufacturing techniques allow the microbridge to be sensitive, fast and small. Used in appropriate applications where airflow needs to be measured.

Supply voltage: Operating temperature: Media compatibility: 8 Vdc to 15 Vdc -25 °C to 85 °C [-13 °F to 185 °F] Dry gas only

## AWM3000 Series

Like the AWM2000 Series, the dual Wheatstone bridges control airflow measurement. The AWM3000 Series is amplified; therefore, it can be used to increase the gain and to introduce voltage offsets to the sensor output. The heater control circuit and the sensing bridge supply circuit are on board the package.

Signal conditioning: Amplified (1 Vdc to 5 Vdc) Port style: Straight

## AWM40000 Series

The microbridge mass airflow sensor operates on the theory of heat transfer. Mass airflow is directed across the surface of the sensing elements. Output voltage varies in proportion to the mass air or other gas flow through the inlet and outlet ports of the package. The specially designed housing precisely directs and controls the airflow across the microstructure sensing element. Mechanical design of the package typically allows it to be easily mounted to printed circuit boards.

The microbridge mass airflow sensor has a unique silicon chip based on advanced microstructure technology. It consists of a thin-film, thermally isolated bridge structure containing heater and temperature sensing elements. The bridge structure provides a sensitive and fast response to the flow of air or other gas over the chip. Dual sensing elements positioned on both sides of a central heating element indicate flow direction as well as flow rate. Laser trimmed thick film and thin film resistors provide consistent interchangeability from one device to the next.

## AWM5000 Series - High Flow

AWM5000 Series microbridge mass airflow sensors feature a venturi type flow housing. They measure flow as high as 20 standard liters per minute (SLPM) while inducing a maximum pressure drop of 2.25 in H<sub>o</sub>O. The microbridge chip is in direct contact with the flow stream, greatly reducing error possibilities due to orifice or bypass channel clogging.

The rugged plastic package has been designed to withstand common mode pressures up to 50 psi, and the small sensing element allows 100 g of shock without compromising performance. The included "AMP" compatible connector provides reliable connection in many demanding applications.

Each AWM5000 sensor contains circuitry which performs amplification, linearization, temperature compensation and gas calibration. A 1 Vdc to 5 Vdc linear output is possible for all listings regardless of flow range (5, 10, 15, or 20 SLPM) or calibration gas (nitrogen, carbon dioxide, nitrous oxide or argon). All calibration is performed by active laser.

#### Signal conditioning: Port style:

Amplified (1 Vdc to 5 Vdc) Threaded, 1/4 in NPT

## AWM700 Series

AWM700 Series microbridge mass airflow sensors provide in-line flow measurement with a specially designed bypass flow housing. The sensors measure flow as high as 200 standard litres per minute (SLPM) while inducing a pressure drop of 1 inch  $H_2O$ , typically. The AWM700 has a high flow range capability in a small package.

Signal conditioning: Port style: Amplified (1 Vdc to 5 Vdc) Tapered, 22 mm

# AWM90000 Series

The AWM90000 Series microbridge mass airflow sensors are available in two versions, mass flow and differential pressure. The AWM92100V has a flow range of  $\pm 200$  sccm with a pressure drop of only 0.49 mBar, typically. The AWM92200V is a differential pressure version that has a range of  $\pm 2$  in H<sub>2</sub>O.

The AWM90000 Series has a 1 ms response time, operates with a supply voltage from 8.0 Vdc to 15.0 Vdc, while consuming only 50 mW of power. The compact plastic package will withstand a maximum overpressure of 25 psi without compromising performance.

# NOTICE

## LAMINAR FLOW

Due to the fast response time of the sensor, these specifications were generated using laminar flow. Airflow instability or "turbulence" present in the airstream will result in an increase in measurement uncertainty.

The turbulent flow problem can be corrected by either straightening the airflow using flow laminarizing or by slowing the response of the sensor using a simple RC time constant on the output of the sensor. This, of course, slows down the sensor response time. The values needed depend on the amount of turbulence present in the application.

Several techniques for laminarizing the flow include adding hex shaped honeycombs, foam, screen materials or adding constrictors (frits) to the flow stream. There are various commercial laminar flow elements that can be purchased. Unfortunately the greater the efficiency of the laminarizer, the greater the increase in pressure drop in order to establish a given flow rate. Plastic honeycomb material probably gives the most improvement for the least pressure drop. In any test fixture, the avoidance of sharp radii is an absolute requirement.

## CAUTION

#### **PRODUCT DAMAGE**

AWM Series Microbridge Mass Airflow Sensors are not designed to sense liquid flow and will be damaged by liquid flow through the sensor.

Failure to comply with these instructions could result in product

# Model 1865 Force/Pressure Transducer

Model 1865 is a high-performance transducer specifically designed to address the needs of certain medical and specialized OEM applications. Offering laser-trimmed compensation, Model 1865 may be specified to operate with either a constant current or voltage supply.

Model 1865 employs a solid state piezoresistive pressure transducer mounted in a plastic package. For applications where force is applied by a flexible membrane to the sensor, such as found in infusion pumps, Model 1865's precision height silicone diaphragm provides long life and is often a reliable replacement for older force or load cell transducers. Utilizing a silicon rubber diaphragm, Model 1865 is compatible with some liquid media applications. Model 1865 may be operated in either current or voltage excitation, and its output may be amplified or signal conditioned, as required. The semiconductor-based sensor offers high resolution using its Wheatstone bridge strain gage design. The height of the unit's patented, poured-in-place silicon rubber diaphragm is controlled to promote sensitivity to low pressure. This diaphragm is bonded to a plastic header and transmits force applied through a special silicone gel to the diaphragm of a silicon piezoresistive die. The back of the die is exposed to atmospheric pressure, which results in a gage pressure output.

Pressure over-range protection: 3X span or 60 psi, whichever is least Media/materials compatibility

Room atmosphere, directly applied force, and liquids Top side: compatible with dimethyl silicon, polyetherimide (Ultem®)

Bottom side: Non-corrosive dry gasses and fluids compatible with silicon, pyrex, RTV silicone and ceramic Gage pressure Diaphragm: Dimethyl silicone

Laser-trimmed normalized output

# FS Series Force/Pressure Sensor

The FS01/FS03 Sensors are special low-cost, peizoresistive-based force sensors. These high-level voltage output, calibrated and temperature- compensated sensors give an accurate and stable output over a 5 °C to 50 °C [41 °F to 122 °F] temperature range. They offer simple operation from a single 5.0 Vdc supply. The FS01/ FS03 sensors feature an integrated circuit sensor element and lasertrimmed, thick-film ceramic in a small plastic housing. Their extremely small size often enables the use of multiple sensors in limited available space. This package also provides excellent corrosion resistance and isolation to external package stress.

| Supply voltage:        | 12.0 Vdc                        |
|------------------------|---------------------------------|
| Operating temperature: | 0 °C to 70 °C [32 °F to 158 °F] |
| Maximum force:         | 7 lb                            |

# **Humidity Sensors**

## HIH-4000 Series

The HIH-4000 Series humidity sensors are designed specifically for high volume OEM users. Direct input to a controller or other device is made possible by this sensor's linear voltage output. With a typical current draw of only 200  $\mu$ A, the HIH-4000 Series is often ideally suited for low drain, battery operated systems. Tight sensor interchangeability reduces or eliminates OEM production calibration costs. Individual sensor calibration data is available.

These sensors deliver instrumentation-quality RH sensing performance in a competitively priced, solderable SIP. Available in two lead spacing configurations, the RH sensor is a laser trimmed, thermoset polymer capacitive sensing element with on-chip integrated signal conditioning.

#### Package style:

Solderable SIP

| TERMINATION                   | CALIBRATION                        | REFERENCE    |

# Honeywell

www.honeywell.com/sensing

Relative Humidity/Temperature and Relative Humidity sensors are configured with integrated circuitry to provide on-chip signal conditioning. These sensors contain a capacitive sensing die set in thermoset polymers that interacts with platinum electrodes. The laser trimmed sensors have an interchangeability of  $\pm 5$  % from 0 %RH to 60 %RH, with stable, low drift performance.

Absorption based humidity sensors provide both temperature and %RH (Relative Humidity) outputs. On-chip signal processing ensures linear voltage output versus %RH. Sensor laser trimming offers accuracy of  $\pm$  2.5 %, and achieves 2 %RH accuracy with calibration.

Supply voltage:4.0 Vdc to 5.8 VdcOperating humidity range:0 %RH to 100 %RH, non-condensingOperating temperature range:-40 °C to 85 °C [-40 °F to 185 °F]

# **HIH Series**

#### HIH-3602 Monolithic integrated circuit

HIH-3602-A and HIH-3602-C RH sensors combine both relative humidity and temperature sensing in a TO-5 housing with a hydrophobic sintered stainless steel filter. The temperature sensor is thermally connected with the RH sensor making the HIH-3602-A/C often ideal for measuring dew point and other absolute moisture terms.

Package style: Termination: NIST certification: TO-5 can 0,46 mm [0.18 in] NIST calibration sensor-specific printout

| TEMPERATURE SENSOR                   | REFERENCE  |
|--------------------------------------|------------|
| 100 k0hm ±5 % @ 25 °C, NTC 0-50 C    | HIH-3602-A |
| 1000 Ohm ±0.2 % @ 0 °C, platinum RTD | HIH-3602-C |

#### HIH-3602-L Integrated circuit

The HIH-3602-L Relative Humidity (RH) sensor delivers instrumentationquality RH sensing performance in a rugged, low cost, slotted TO-39 housing. On-board signal conditioning reduces product development times while a typical current draw of only 200  $\mu$ A makes the HIH-3602-L perfect for battery powered systems. This sensor should be shielded from bright light.

## OPTIONS

*HEL-700* Temperature range: Packaging style/termination:

Radial chip/ribbon leads (type A) Radial chip/no leads (type B) SMT (axial) flip chip/no leads (type C)

-200 °C to 540 °C [-300 °F to 1000 °F]

Туре А

Type B

Type C

Honeywell's thin-film RTD (Resistance Temperature Detector) temperature sensors feature two distinct series. These sensors are laser-trimmed for accuracy and interchangeability. Linear outputs are stable and fast.

The TD Series Temperature Sensors are silicon-based RTDs. They offer 2000 Ohm nominal resistance at 20 °C. Temperature range of -40 °C to 150 °C [-40 °F to 302 °F].

The HEL Series Temperature Sensors are platinum RTDs, offering 100 Ohm or 1000 Ohm versions and temperature ranges of -200 °C to 540 °C [-300 °F to 1000 °F].

# **Temperature Sensors - Thermistors**

# Glass Encapsulated Chip (GEC) Thermistors

The GEC thermistors are high-quality, hermetically-sealed, glassencapsulated chip thermistors in an axial lead package. They cover the full temperature range of -60 °C to 300 °C [-76 °F to 572 °F]. These rugged sensors are designed for many applications which demand reliability at low cost. The uniform dimensions often are ideally suited for automated assembly.

| Operating temperature:             | -60 °C to 300 °C [-76 °F to 572 °F] |
|------------------------------------|-------------------------------------|
| Encapsulation:                     | DO-35 glass                         |
| Lead material:                     | Tinned copper-clad steel            |
| Dissipation constant (DC):         | 2.5 mW/°C in still air min.         |
| Time constant (TC):                | 4 s in still air max.               |
| Resistance range at 25 °C [77 °F]: | 1 kOhm to 1 MOhm                    |

Thermistors change resistance with a change in temperature. They do not amplify, rectify, polarize or generate a signal. The thermistor temperature may be changed by the surrounding temperature or by self-heating the thermistor by passing a current through it.

Most applications such as temperature measurement and control or copper coil compensation require that the power dispersed in a thermistor be kept to a minimum so as not to perceptibly self-heat the thermistor. Other applications depend entirely on the self-heating effect. When the surrounding temperature is fixed, the resistance of a thermistor is largely a function of power being dispersed within it, raising its temperature above its environment. Under these operating conditions, the temperature may rise 100 °C to 200 °C [121 °F to 392 °F] and the resistance may be lowered to 1/1000<sup>th</sup> of its original value at low current.

This self-heating characteristic provides a whole field of uses for the thermistor. In the self-heat state it is thermally sensitive (its resistance will be changed) to any condition, changing the rate at which heat is conducted away from it. If the rate of heat removal is ideally fixed, then the thermistor is sensitive to power input and suited for use in voltage or power level control applications.

# **Epoxy-coated or Uncoated Chip** Thermistors

Epoxy-coated or uncoated chip thermistors are available in a broad range of custom resistance values and R/T curves. They are also available in two lead types:

• Uninsulated: 0,2032 mm [0.008 in] diameter, tinned copper for 1 kOhm or less, and tinned copper alloy for greater than 1 kOhm.

• Insulated: 0,254 mm [0.010 in] diameter, nickel wire, Teflon®-insulated, 38,1 mm [1.5 in] long and furnished with 6,35 mm [0.25 in] stripped ends of 0,4064 mm [0.016 in] and 0,508 mm [0.020 in] tin-plated copper leads.

| Operating temperature range: | -40 °C to 125 °C [-40 °F to 257 °F]*                      |
|------------------------------|---|
| Encapsulation:               | Epoxy-coated or uncoated                                  |
| Lead material: •             | Uninsulated: tinned copper/copper alloy                   |
|                              | <ul> <li>Insulated: tinned copper/copper alloy</li> </ul> |
|                              | with nickel wire Teflon                                   |
| Dissipation constant (DC):   | 0.75 mW/°C in still air min.                              |
| Time constant (TC):          | 15 s in still air max.                                    |

Time constant (TC):

Resistance range at 25 °C [77 °F]: 100 Ohm to 100 kOhm \*Very accurate (±0.2 °C) when used between 0 °C to 70 °C

[32 °F to 158 °F]. Other ranges and tolerances are available.

## **Disc Thermistors**

Uncoated or epoxy-coated Disc thermistors are available in a broad range of custom resistance values and R/T curves. They are only available with uninsulated leads. Diameters range from 2,54 mm [0.1 in] to 10,16 mm [0.4 in]. They are often ideally suited for low-cost applications with a maximum temperature of 150 °C [302 °F]. They are also typically well suited for PC board mount and are available on tape and reel.

**Operating temperature range:** Encapsulation: Lead material: Dissipation constant (DC):

-60 °C to 150 °C [-76 °F to 302 °F] Epoxy-coated or uncoated Uninsulated: tinned copper/copper alloy Varies with size, ranges from 3 mW/°C to 8 mW/°C

100 Ohm to 100 kOhm

Time constant (TC): Varies with size ranges from 10 s to 32 s Resistance range at 25 °C [77 °F]:

# **Small Bead Thermistors**

Small Bead Thermistors feature relatively uniform size, offer ultra-fast time response and are highly sensitive to electric power. They are often ideally suited for use in low heat capacity applications and their micro size many times makes them perfect for use in extremely small assemblies such as catheters and hypodermic needles. They are also often used in self-heat applications such as gas analysis, gas flow measurement and thermal conductivity analysis.

**Operating temperature range:** -60 °C to 300 °C [-76 °F to 572 °F] Encapsulation: Glass hermetic seal Lead material: Dissipation constant (DC): 0.1 mW/°C in still air min. Time constant (TC): Resistance range at 25 °C [77 °F]: 2 kOhm to 100 kOhm

## **Glass Probe Thermistors**

Glass Probe thermistors are shock resistant, rugged, glass-encapsulated units that are ideally suited for immersion in fluid and convenient for mounting in air sensor assemblies. They are available in two configurations: standard and mini.

## TEMPERATURE - THERMISTORS

# E-I Matched Bead Thermistors

E-I Matched Bead thermistors are designed for use in many gas chromatography and other thermal conductivity gas analysis instruments. Each bead is mounted to a special hermetically-sealed header. For maximum sensitivity, the higher resistance units should be used at higher ambient temperatures.

# **Temperature Sensors - Probes**

**ES120 Series Coolant/Oil Temperature Sensor Probes** 

The ES120 probe is a thermistor mounted into a plastic lead frame and assembled into a metal body. This subassembly is then overmolded to produce both the electrical connection system and the hexagonal shape for easy installation. The all-plastic design reduces heat loss through the sensor, thereby reducing wind chill effects.

SERIES NAME ES120 Coolant/Oil Temperature Sensor Probe Temperature Sensor Probes are finished thermistor assemblies complete with thermistor housing, extension leads and usually a connector. A variety of customized packages are available.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

# **ES110** Series Inlet Air Temperature **Sensor Probes**

The ES110 probe is a thermistor mounted into a plastic lead frame and assembled into a metal body. This subassembly is then overmolded to produce both the electrical connection system and the hexagonal shape for easy installation. Two end configurations are available depending upon response required or degree of protection. The all-plastic design reduces heat loss through the sensor, thereby reducing wind chill effects.

**Operating temperature range:** Standard NTC (Negative Temperature Coefficient) epoxy **Encapsulation:** 

Resistance range at 25 °C [77 °F]

Lead material:

Time constant:

**Dissipation constant:** 

brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.) 0.85 mW/°C in still air at 25 °C [77 °F] 1 s in liquids, 12 s max. in still air

Terminals are 2,8 mm x 0,8 mm [0.11 in x 0.03 in]

2.5 kOhm at 20 °C [68 °F] ±5 %

-40 °C to 155 °C [-40 °F to 311 °F]

protection

SERIES NAME ES110 Inlet Air Temperature Sensor Probe

Downloaded from Arrow.com.

# Air Conditioning Temperature Sensor **Probes**

A fully overmolded and protected sensor incorporating a specially developed NTC (Negative Temperature Coefficient) to withstand many very aggressive, damp operating conditions. The housing is snap fit promoting easy assembly.

**Operating temperature range:** -30 °C to 100 °C [-22 °F to 212 °F] Encapsulation: Special NTC epoxy coating Terminals are 2,8 mm x 0,8 mm [0.11 in x 0.03 in] Lead material: brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.) **Dissipation constant:** 2.5 mW/°C in still air Time constant: 2 s in water, 15 s max. in still air Resistance range at 25 °C [77 °F]: 9 kOhm at 0 °C [32 °F] ±1.5 %

NAME

# **Refrigerant Temperature Sensor Probes**

A fully sealed, quick response temperature sensor suitable for use in many HVAC systems.

**Operating temperature range:** -40 °C to 140 °C [-40 °F to 284 °F] **Encapsulation:** NTC (Negative Temperature Coefficient) encapsulated in a thermal heat paste

Terminals are 1,5 mm x 0,6 mm [0.06 in x 0.02 in] Lead material: brass with a copper flash protection layer with final plating to customer requirement (silver, tin, gold, etc.) Tor values (time to reach 63.2 % of the difference **Dissipation constant:** between two temperatures) are typically 10 s rising temperature and 6 s falling temperature

Time constant: Resistance range at 25 °C [77 °F]:

5,0 [0,20]

# Earth Return (Ground) Temperature **Sensor Probes**

An all-metal temperature sensor, with the body being the ground, incorporating a flat disc thermistor held flush on the base of the body by a spring-loaded pressure pad. This sensor provides a quick response to small variations in high temperature changes.

#### **Operating temperature range:** Encapsulation:

Lead material: **Dissipation constant:** Time constant: Resistance range at 25 °C [77 °F]:

-40 °C to 155 °C [-40 °F to 311 °F] NTC (negative temperature coefficient) encapsulated in a silicone paste Standard Lucar type or other variations 3 mW/°C in still air 10 s in automotive coolant Per customer requirements

Earth Return (Ground) Temperature Sensor Probe

# Surface Temperature Sensor Probes

Sensor assembly is designed to have good heat conductivity between the thermistor element and the area to be monitored. Time response is consistent with the thermal conductivity of the surface being measured. Multiple configurations allow sensor to be mounted, bolted, riveted or attached adhesively.

**Operating temperature range:** -60 °C to 150 °C [-76 °F to 302 °F] **Encapsulation:** Thermally conductive epoxy used to pot discrete component into surface-style housing Lead material: Insulated lead wires and terminals when required, other options available **Dissipation constant:** 3.3 mW/°C to 12 mW/°C (varies with size and housing style) 1 s to 40 s (application dependent) Time constant: Resistance range at 25 °C [77 °F]: Per customer requirements

Air Conditioning Temperature Sensor Probe

# Air/Gas Temperature Sensor Probes

Air/Gas probes contain an exposed thermistor element because gas is not as good a heat conductor or thermal sink as a liquid, and because time response is normally an important consideration. The sensor housing may be composed of plastic or other thermally conductive materials to reduce conduction and heat from the gas circulating around the thermistor. Multiple configurations allow easy mounting.

| Operating temperature range: | -60 °C to 150 °C [-76 °F to 302 °F]               |
|------------------------------|---|
| Encapsulation:               | None, sensing element is exposed                  |
| Lead material:               | Insulated lead wires and terminals when required, |
|                              | other options available                           |

# **Thermal Cutoffs**

Thermal Cutoffs include products for use in a wide array of small appliances, major appliances, office copy machines, automotive and HVAC equipment. These devices are available in various lead lengths and configurations. Honeywell offers versions that are compliant with European Directive 2002/95/EC, otherwise known as RoHS (Restriction of Hazardous Substances), in electrical and electronic equipment. NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

#### NOTICE

- To maximize product life, use a 30 °C [86 °F] min. differential between the operating ambient temperature at the fuse location and the specified functioning temperature of the fuse being used. Maintain a 40 °C [104 °F] min. differential between devices with functioning temperatures above 200 °C [392 °F].
- Under no condition should the thermal cutoff be exposed to a continuous normal temperature rating in excess of 200 °C [392 °F]. Only proper testing of the above will determine the selected thermal cutoff's suitability within the application.

# **D** Series

The D Series responds to temperature by interrupting an electrical circuit when the operating and/or environmental temperature exceeds the thermal rating of the fuse. This is accomplished when the organic pellet experiences a phase change, allowing the spring activated contacts to permanently open the circuit.

Operating temperature range: Environmental exposure range: 72 °C to 240 °C [162 °F to 464 °F] see notice

# **RD** Series

The RD Series responds to temperature by interrupting an electrical circuit when the operating and/or environmental temperature exceeds the thermal rating of the fuse. This is accomplished when the organic pellet experiences a phase change, allowing the spring activated contacts to permanently open the circuit.

The electrical resistance of an RD Series thermal cutoff is comparable to that found in an equal length of 18 gage solid copper wire. With proper heat flow, heat generation below 15 Å is minimal. Above 15 Å, the upper limit on current capacity will depend on the environment for each specification.

**Operating temperature range:** Environmental exposure range: 72 °C to 240 °C [162 °F to 464 °F] see notice on previous page

# Thermostats - Redi-Temp®

Redi-Temp<sup>®</sup> is a line of standard thermostat products offered in a range of pre-set temperatures. These products are available standard for immediate delivery. They are often useful for low-volume applications where standard configurations are acceptable, as well as for evaluating new designs and prototypes.

# 3455RC 15 A High Temperature Universal Thermostat Series

Shipped from stock, the 3455RC Series thermostats are often suitable for applications such as copy machines, power supplies, telecommunications and ovens. UL, CSA and European approval agencies listings available.

# **Thermostats - Commercial**

2450R/2450HR/2455R Series Phenolic Automatic Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product. These products are factory calibrated to the customer's specification.

| Reset type:                   | Automatic                        |

| Operating temperature range:  | 0 °C to 150 °C [32 °F to 302 °F] |
| Environmental exposure range: | 0 °C to 150 °C [32 °F to 302 °F] |

Commercial thermostats include products for use in a wide array of small and major appliances, automotive applications, office copy machines, heat and smoke detectors and HVAC equipment. These snap-action thermostats include automatic or manual reset options, phenolic or ceramic housings, and a variety of mounting brackets and terminal options.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

#### NOTICE

Limitations: Type 2455RM/2450CM is intended as a manual reset control. It is not to be used on applications where a limit thermostat is required unless backup protection is provided. Units have been tested by UL for 1,000 cycles under load, 5,000 cycles no load, and are not considered limit devices.

#### WARNING PERSONAL INJURY

Do not use the bi-metallic, snap action thermostat components as final safety devices in any application. Their intended use is to provide an electrical disruption in the application circuit in the event of a change in temperature conditions.

Failure to comply with these instructions could result in death or serious injury.

## **Thermostats - Precision**

## 3001/3004 Series Non-Hermetic Thermostats

The 3001/3004 Series are factory pre-set, single pole, single throw thermal switches available to open and close on temperature rise. The phenolic base is made dust-proof by a metal closure which also provides thermal and electrical isolation for the silver contacts. The low silhouette design of the 3001 Series makes it an excellent choice where a non-hermetic precision unit is required for tight tolerances. The 3004 Series offers a metal sleeve insert-rivet construction and higher spacing to meet European approval agency requirements. It is also UL recognized and CSA certified.

1 A to 3 A (3001, 3001U Series)\* 2 A to 4 A (3004 Series)\* Amperage: Housing material: Phenolic base with metal closure -18 °C to 168 °C [0 °F to 335 °F] -18 °C to 177 °C [0 °F to 350 °F] **Operating temperature range:** Environmental exposure range: MIL-STD-202, Method 301 **Dielectric strength:** 1500 Vac 60 Hz terminal to case (2000 Vac 3004) Insulation resistance: MIL-STD-202, Method 302, Cond. B 500 MOhm, 500 Vdc applied **Contact resistance:** MIL-STD-202, Method 307, 50 mOhm MIL-STD-202, Method 112, Cond. A, 1x10<sup>-5</sup> atm cc/s Hermetic seal: Moisture resistance: MIL-STD-202, Method 106

\*Based on 240 Vac and life-cycle dependent. Call for further details.

42

Precision snap-action thermostats include both hermetic and nonhermetic devices for use in a wide array of applications including computers, copy machines, aircraft, radar equipment, medical equipment and electronic control systems. We also offer custompackaged thermostats for application flexibility and industrial-grade thermostats designed to operate in extreme environmental conditions. NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

#### NOTICE

Limitations: Type 3455RM/3450CM is intended as a manual reset control. It is not to be used on applications where a limit thermostat is required unless backup protection is provided. Units have been tested by UL for 1,000 cycles under load, 5,000 cycles no load, and are not considered limit devices.

#### WARNING PERSONAL INJURY

Do not use the bi-metallic, snap action thermostat components as final safety devices in any application. Their intended use is to provide an electrical disruption in the application circuit in the event of a change in temperature conditions.

Failure to comply with these instructions could result in death or serious injury.

## **3100/3106 Series Hermetic Thermostats**

The 3100/3106 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically-sealed steel housing with a glass-to-metal seal at the terminal junction. It is manufactured and tested to meet or exceed critical commercial and industrial specifications. The 3106 Series has gold alloy contacts for low voltage applications.

3150/3156 Series Low Silhouette Hermetic Thermostats

The 3150/3156 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically-sealed steel housing with a glass-to-metal seal at the terminal junction. The low silhouette and compact design often make it especially well suited for applications that require miniaturization. The 3156 Series has gold alloy contacts for low voltage applications.

## 3600/3601 Series TO-5 Thermal Switches

The 3600/3601 Series is a single pole, single throw, bimetal snap-action switch available to open or close on temperature rise. These devices are specifically designed and often suited for mounting on products such as printed circuit boards to protect against hazardous temperatures associated with the thermal density of components on backplanes, flexible circuitry and sophisticated time-based circuits.

Amperage: 1 A resistive Housing material: nickel Operating temperature range: 40 °C to 120 °C [104 °F to 248 °F] -50 °C to 150 °C [-58 °F to 302 °F] Environmental exposure range: Dielectric strength: 500 Vac 60 Hz for one second, terminal to case Insulation resistance: 20 MOhm at 500 Vdc **Contact resistance:** 60 MOhm 1x10<sup>-3</sup> atm cc/s Hermetic seal:

# 3000 Series Custom-packaged Thermostats

The 3000 Series incorporates a Honeywell thermostat assembled in a custom package for use in a variety of applications that require flexibility in mounting and terminal configurations. A typical product includes a 3100 hermetic internal thermostat with a terminal selection, housing selection and customized part number. These custom package devices operate in many extreme environmental conditions, such as exposure to hazardous substances, dust particles and liquid immersion.

Amperage:7 A resistiveHousing material:Stainless steel or brassOperating temperature range:-29 °C to 260 °C [-20 °F to 500 °F]Environmental exposure range:-62 °C to 288 °C [-80 °F to 550 °F]Dielectric strength:MIL-STD-202, Method 3011250 Vac 60 Hz terminal to caseMoi

## 3450CM/3455RM Series Ceramic and Phenolic Manual Reset Thermostats

A temperature-sensitive bimetal disc, electrically isolated from the switch, actuates the normally closed contacts. The contacts open when the surface or ambient temperatures increase to the operating snap point of the calibrated disc. The circuit will stay open above room ambient temperature until the manual reset button is pressed. Response to temperature changes is extremely rapid due to the inherently low mass of the disc and the small size of the product.

# Reset type: Manual Amperage capacity: 15 A resistive max. Housing material: Ceramic or phenolic Operating temperature range: 52 °C to 232 °C [125 °F to 450 °F] (ceramic) 52 °C to 150 °C [125 °F to 302 °F] (phenolic) Environmental exposure range: 10 °C to 260 °C [50 °F to 500 °F] (ceramic) 10 °C to 150 °C [50 °F to 302 °F] (phenolic)

## High Amperage Custom Package Thermostats: Non-Hermetic Internal Thermostats Only

These custom designed Series 3000 packages include a nonhermetic non-adjustable, snap action 3450RC/3455RC thermostat. Performance characteristics are outlined elsewhere in this catalog. Housing material varies with customer requirements. Brass, stainless steel, and other materials are available. Customized wire, terminals and size may be designed to suit requirements.

#### THERMOSTATS - HIGH RELIABILITY

#### 3200 Series Aerospace

The 3200 Series is a single pole, single throw switch activated by a snapaction bimetal disc. Temperature calibrations are pre-set at the factory and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing, with a glass-to-metal seal at the terminal junction. It is manufactured and tested to meet or exceed critical military and aerospace specifications for spaceflight use, including temperature stability, shock, vibration and cleanliness.

#### Amperage: Housing material:

**Operating temperature range:** Environmental exposure range: Dielectric strength: Insulation resistance: MIL-STD-202, Method 302, 500 MOhm MIL-STD-202, Method 307, 0.025 Ohm max. **Contact resistance:** Hermetic seal: Moisture resistance:

Acceleration: Thermal shock: Salt (1) spray:

Shock:

Vibration:

High Reliability thermostats are manufactured to meet the stringent requirements of the military and aerospace industries for dielectric strength, moisture resistance, vibration, shock and hermetic seal. They meet all domestic and international approvals, as well as appropriate military specifications (i.e., MIL-S-24236).

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

## 3MS1 QPL Series Military

The 3MS1 Series is a single pole, single throw switch activated by a snap-action bimetal disc. Temperature calibrations are pre-set at the factory, and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing with a glass-to-metal seal at the terminal junction. It is qualified to MIL-S-24236 and is QPL listed for military applications.

## **3153 Series Low Silhouette**

The 3153 Series is a single pole, single throw switch activated by a snapaction bimetal disc. Temperature calibrations are pre-set at the factory, and each unit is 100 % thermally and mechanically inspected. It is available to open or close on temperature rise. The case is laser welded to form a hermetically sealed steel housing, with a glass-to-metal seal at the terminal junction. The low silhouette and compact design often make it especially well-suited for applications that require miniaturization. Acceptance testing is performed in accordance with MIL-S-24236, Table III.

## Heaters

## **3100 Series Silicone Wire-wound Heaters**

The 3100 Series contains resistive wire encased between two layers of fiberglass-supported silicone rubber. All bonding adhesives are uncured silicone rubber. These heaters are cured under pressure and temperature during manufacturing. The multi-stranded resistance wires allow wire-wound heaters to conform to three dimensional shapes. Optional PSA (Pressure Sensitive Adhesive) is available with all series.

ELEMENT

Heaters are resistive devices that are used in a variety of applications such as airborne valves, appliances, satellites and medical electronics. They are available in flat, molded-to-shape, spiral wrap, transparent, composite and high temperature configurations. Honeywell uses a variety of materials to manufacture its heaters. These include silicone, which can easily be vulcanized to metal parts; Kapton<sup>®</sup>, noted for its thermal stability over a wide temperature range; as well as other flexible dielectric materials. Heaters are available with single, multiple or variable watt densities to customize heat output to unique application needs. They may also be bonded to other system parts or combined with Honeywell thermostats, thermistors, thermocouples, temperature sensors and thermal fuses to form custom-engineered heating systems. Optional PSA (Pressure Sensitive Adhesive) is available with all series.

NOTE: The products in this section do not follow the "how to use this catalogue" instructions provided in the catalogue introduction. Specific reference numbers are not given due to their custom nature. Please contact your local Honeywell sales office for ordering information.

# 3200 Series Silicone Chemically etched Heaters

The 3200 Series contains resistive foil traces encased between two layers of fiberglass-supported silicone rubber. All bonding adhesives are uncured silicone rubber. These heaters are cured under pressure and temperature during their manufacturing. They are often the optimal choice for multiple watt densities or varying trace geometry requirements.

power: 40 W/in<sup>2</sup> 250 °C [482°F] max. storage temperature range: 200 °C [392 °F] max. ## 3400 Series Kapton® or High **Temperature Insulated Heaters**

The 3400 Series contains etched, resistive foil encased between two layers of Kapton. The Kapton Insulated Heaters use an acrylic thermoset bonding adhesive, while the Kapton Insulated High Temperature Heaters use a Teflon<sup>™</sup> bonding adhesive. Insulated heaters are often used in applications where thin profile and or low material outgassing are important considerations.

### 78000 Series Transparent Heaters

The 78000 Series heater resistive element consists of a very thin layer of ITO (Indium Tin Oxide) electrically sputtered on PET polyester film. The electrical connection is made via silver ink or carbon bus bars laid on top of the ITO. Wire connections are made via ring terminals eyeleted to the silver or carbon bus bars or flexible tail/connector. Transparent heaters are often used to warm liquid crystal displays (LCDs) in cold, moist environments.

## **Magnetic Position Sensors**

## SS41/SS400 Series and SS51/SS500 Series Hall-effect Digital Position Sensors

The SS41/SS51 Series Bipolar Hall-effect Sensors offer reverse polarity protection, as well as a wide operating voltage and temperature range. The SS400/SS500 Series position sensors have a thermally balanced circuit over the full operating temperature range. The negative compensation slope is optimized to match the negative temperature coefficient of lower-cost magnets. Bipolar, latching, and unipolar magnetic types are available.

#### Supply voltage:

#### **Operating temperature:**

HALL ELEMENT CENTER

4.5 Vdc to 24 Vdc (SS41/SS51) 3.8 Vdc to 30 Vdc (SS400/SS500) -40 °C to 150 °C [-40 °F to 302 °F]

68

Honeywell's Solid State Position Sensor family includes digital and analog Hall-effect position sensors, magnetoresistive digital sensors, Hall-effect vane sensors, gear tooth sensors, Hall-effect basic switches, and magnets. Solid State Position Sensors promote reliability, high speed and long life and are directly compatible with other electronic circuits. Position sensors are often used in applications which require accurate,

reliable outputs. They are found in brushless dc motors, utility meters, welding equipment, vending machines, home appliances and computers.

#### **OPTIONS**

Maximum Operating Point and Minimum Release Point are specified @ 25  $^\circ\text{C}$

## SS49E/SS59ET Series

The SS49E/SS59ET Series economical linear Hall-effect sensors are small, versatile devices that are operated by the magnetic field from a permanent magnet or an electromagnet. The linear sourcing output volume is set by the supply voltage and varies in proportion to the strength of the magnetic field

## **SS94 Series Ratiometric Hall-effect Linear Position Sensors**

The SS94 utilizes a Hall-effect integrated circuit chip which promotes increased temperature stability and performance. Laser-trimmed thick film resistors on the ceramic substrate and thin film resistors on the integrated circuit reduce null and gain shifts over temperature which results in consistent sensitivity from one device to the next

#### Package style:

# SR3/SR4 Series Cylindrical Digital Position Sensors

The SR3 Series Hall-effect digital position sensors are enclosed in a plastic cylindrical housing and meet NEMA 3, 3R, 3S, 4, 4X, 12 and 13 requirements. The sensors are capable of operation at frequencies exceeding 100 Hz. The SR4 Series digital position sensors contain a magnetoresistive sensing element. The SR4 Series will typically sense either a north or south pole at a level of 15 Gauss.

#### Package style: Operating temperature:

Plastic - PBT -40 °C to 85 °C [-40 °F to 185 °F]

Optoelectronics is the integration of optical principles and semiconductor electronics. Optoelectronic components are reliable, costeffective sensors. Standard infrared emitting diodes (IREDs), IR detectors and assemblies are covered.

Infrared sensors are often used for presence sensing, motion sensing, position encoding, limit sensing, movement detection and counting.

## HOD Series Single Fiber Duplex Modules

The HOD Series allows full duplex communication over a single fiber link. These products may also be used where a dual fiber solution is neither possible nor economical. Each duplex module consists of one on-axis port and one off-axis port, each configured with the appropriate devices.

## **Current Sensors**

### **Closed Loop Current Sensors**

Closed loop current sensors measure ac, dc and impulse currents over 0 A to 25 A, 0 A to 50 A, 0 A to 100 A, 0 A to 600 A and 0 A to 1200 A ranges. The CSN series is based on the Hall-effect principle and the null balance or zero magnetic flux method (feedback system). The magnetic flux in the sensor core is constantly controlled at zero. The amount of current required to balance zero flux is the measure of the primary current flowing through the conductor, multiplied by the ratio of the primary to secondary windings. This closed loop current is the output from the device and presents an image of the primary current reduced by the number of secondary turns at any time. This current can be expressed as a voltage by passing it through a resistor.

The CSN Series has a high overload capacity, a high level of electrical insulation between primary and secondary circuits and a rapid response rate. Lightweight and compact, and with no restriction on input current waveform, the sensors are often ideal for variable speed drives, power supplies, feedback control systems, robotics/welding equipment and general overcurrent protection.

| Sensed current type: |    | 50000 0  |    | ac or dc |
|----------------------|----|----------|----|----------|
| EMC:                 | ΕN | 50082-2, | ΕN | 50081-2  |
| Accuracy:            |    |          |    | <0.5 %   |
| Housing material:    |    |          |    | UL94-V0  |

Current sensors monitor ac or dc current. Included are adjustable linear, null balance, digital and linear current sensors.

Digital current sensors can sound an alarm, start a motor, open a valve or shut down a pump. The linear signal duplicates the waveform of the current being sensed, and can be used as a feedback element to control a motor or regulate the amount of work being done by a machine.

## CSN Series Magnetoresistive (MR) Current Sensor

The CSN Series MR Current Sensor builds on patented Honeywell technology to offer superior sensor performance and accuracy in current measuring applications. There is virtually no offset drift over the entire operating temperature range. The sensor operates from a +5 V unipolar supply and has an accessible, internal 2.5 V voltage reference. The sensor can operate from either the internal voltage reference or an external voltage reference, thus enabling several sensors to be used without offset imbalance.

## CSNS Series Closed Loop Current Sensors

The CSNS Series closed loop current sensor offers a flexible solution for measuring currents up to  $\pm 600$  A. These small sensors have a large primary through hole to accept either a cable or a variety of busbar sizes. The sensors can be mounted vertically or horizontally and come with connection options of integral Molex type connector or a flying lead. The sensors are closed loop devices and based on the principle of Hall effect and null balance method. The output from the current sensor is the balancing current that is the perfect image of the primary current reduced by the number of secondary turns at any time. The current can be expressed as a voltage by passing it through a load resistor.

## **Open Loop Current Sensors CSL Series Linear Current Sensors**

CSL Series linear current sensors incorporate our 91SS12-2 and SS94A1 linear output Hall-effect transducer (LOHET<sup>m</sup>). These sensors cover measuring ranges from 0 A to 950 A. The sensing element is assembled in a printed circuit board mountable housing. This housing is available in four configurations. Normal mounting is with 0.375 in long 4-40 screw and square nut (not provided) inserted in the housing or a 6-20 self-tapping screw. The combination of the sensor, flux collector and housing comprises the holder assembly. These sensors are ratiometric.

Sensed current type: Housing:

ac or dc PBT polyester

## **CSD Series Digital Current Sensor**

Each Honeywell CS Series digital current sensor provides a logic-level output that changes from approximately Vsupply to 0.5 Vdc when the sensed current exceeds the operate point. Each digital sensor will sense ac or dc current, but when sensing ac current, the output will turn off at every zero crossing. Maximum current limited only by conductor size.

Housing: Operating temperature:

**Liquid Level Sensors** 

Honeywell Liquid Level Sensors incorporate a voltage level switch which provides a digital output that denotes the presence or absence of liquid.

The mode of operation is derived from the principle of total internal reflection. An LED and detector are housed within a plastic dome at the head of the device. When no liquid is present, all light from the LED is totally internally reflected from the dome boundary to the detector. When liquid covers the dome, the effective refractive index at the dome/liquid boundary changes, allowing some light from the LED to escape. Thus the amount of light received by the voltage level switch is reduced and the output switches, denoting the presence of liquid. This method of liquid level sensing is very fast and instantaneous for water.

Principle - in air

## LLE Series Enhanced Liquid Level Sensor

The LLE Series enhanced liquid level sensors use a phototransistor trigger which provides a digital output that denotes the presence or absence of liquid. This series incorporates reverse polarity, over voltage, short circuit and transient protection.

The LLN Series industrial liquid level sensors are designed for many harsh industrial environments with extremes in temperature, pressure, vibration and shock. The LLN Series has reverse polarity and overvoltage protection. Housed in stainless-steel, the LLN Series has long life and is easy to clean. The LLN Series terminates using industry standard quick-connect connectors.

## **Basic Switches**

## **BZ/BA/BM/BE Series Basic Switches**

BZ/BA/BM/BE Series standard basic switches are used for simple or precision on/off application needs.

As well as the catalogue listings presented here, we offer other versions with higher temperature ratings, different termination options, different electrical ratings and Single Pole, Single Throw (SPST) circuitry. Refer to our Web site for details.

| Voltage:               | 250 Vac                             |
|------------------------|-------------------------------------|
| Electrical rating:     | up to 25 A                          |
| Operating temperature: | -55 °C to 85 °C [-67 ° F to 185 °F] |
| Termination:           | Screw                               |
| Contact type:          | Silver                              |
| Approvals:             | CE, CSA, UL, ENEC                   |
| Switching options:     | Single pole, double throw (SPDT)    |

These listings include standard size basics, miniature and subminiature switches. The precision snap-action mechanisms are offered with a wide variety of actuators and operating characteristics. Basic switches are often ideal for applications requiring compactness, light weight, accurate repeatability and long life.

They are best used for presence/absence detection where physical contact with object is permissible. Very economical.

# SM and SX Series Subminiature Basic Switches

SM and SX Series subminiature basic switches are used for simple or precision on/off application needs. These switches combine small size and light weight with ample electrical capacity, precision operation and long life. The SX Series are small, precision, snap-action switches that are often ideal where savings in space and weight are important.

## ZM, ZX, ZV and ZW Series Subminiature Basic Switches

ZM, ZX, ZV and ZW Series subminiature basic switches are cost-effective devices used for simple on/off applications. These switches combine small size and light weight with ample electrical capability and long life. Plastic lever capability is available on the ZV Series.

### AVAILABLE TERMINALS

Quick Connect (QC)

0.187 in wide x 0.020 in thick. D8 terminals are European approved when used with electrical ratings A, B, D, E or S. International approval agencies require that switches with these terminals have insulated receptacles or connector.

0.187 in wide x 0.020 in thick. E8 terminals are European approved when used with electrical ratings A, B, D, E or S.

0.250 in wide x 0.032 in thick. E9 terminals are European approved when used with electrical ratings A, B, D, E, S, V or Z.

These terminals interface with snap-on receptacles and other components from AMPMODU interconnection system. PCB terminals are European approved when used with electrical ratings A,

B, D, E, S.

#### ACTUATION OPTIONS

Note: The optional mounting hole dimensions shown above are standard on V5/V7 International Series switches.

## **Turbidity Sensors**

### **APMS-10 Series**

The APMS-10 wash process sensor application kit includes the sensor, PC interface and the software required to apply the Honeywell wash process sensor in bath or other wet applications. Once installed, the kit enables the user to begin taking measurements of water quality. To run the wash process application, the user must supply a PC that meets the specified hardware requirements and an 8 Vdc to 30 Vdc power supply. Wash process sensors provide an integrated package of a microprocessor and sensing functions that measures turbidity, conductivity and/or temperature. Information from the sensor may be used in an adaptive control scheme to monitor and control the application process to help improve process quality and minimize consumption of energy, water, materials and time. Each of the sensing functions is conditioned by the internal microprocessor. All data transmitted to the host system is supplied by the microprocessor via a 5 Vdc custom communications protocol. The sensor operates in slave mode, waiting for the host system to request sensor information.

#### Supply voltage: Ratio range: Output type:

8 Vdc to 30 Vdc 0 NTU to 4000 NTU RS-232 Serial link, slave mode

Turbidity sensing provides a quick, practical indication of the relative amount of solids suspended in water or liquids. Conductivity sensing gives a relative measurement of the ionic concentration of a given liquid.

Turbidity sensors can provide inputs to the control algorithms of dishwashers and clothes washers. Many industrial and commercial bath applications may make use of integrated turbidity and conductivity sensing to improve product quality, minimize ingredient consumptions and reduce waste water discharge.

Package style: Operating temperature: Tank mount 20 °C to 60 °C [68 °F to 140 °F]

### **TURBIDITY SENSORS**

## **APMS-11 Series**

The Low NTU turbidity sensor application kit includes the sensor and installation instructions to apply the sensor in a bath or other wet applications. Once installed, the sensor enables the user to measure the relative amount of particulate in solution. To run the application, the user must supply a 5 Vdc power supply that meets the specified tolerance and solicits analog output from the output pin of the device. Low NTU turbidity sensors provide an integrated package of optic devices, amplification and trim potentiometer capability. This sensor may be used in an adaptive control scheme to monitor and control the wash process to help improve process quality and minimize consumption of energy, water, materials and time.

Supply voltage: Ratio range: Output type:

4.9 Vdc to 5.1 Vdc 0 NTU to 600 NTU 0 Vdc to 5 Vdc analog

Honeywell Sensing and Control designs, manufactures and markets the industry's most extensive line of sensing and control technologies available from a single switch or sensor manufacturer. You can trust Honeywell for developing the right products for your applications.

#### Warranty/Remedy

Honeywell warrants goods of its manufacture as being free of defective materials and faulty workmanship. Honeywell's standard product warranty applies unless agreed to otherwise by Honeywell in writing; please refer to your order acknowledgement or consult your local sales office for specific warranty details. If warranted goods are returned to Honeywell during the period of coverage, Honeywell will repair or replace, at its option, without charge those items it finds defective. The foregoing is buyer's sole remedy and is in lieu of all warranties, expressed or implied, including those of merchantability and fitness for a particular purpose. In no event shall Honeywell be liable for consequential, special, or indirect damages.

While we provide application assistance personally, through our literature and the Honeywell web site, it is up to the customer to determine the suitability of the product in the application.

Specifications may change without notice. The information we supply is believed to be accurate and reliable as of this printing. However, we assume no responsibility for its use.

#### **Sales and Service**

Honeywell serves its customers through a worldwide network of sales offices, representatives and distributors. For application assistance, current specifications, pricing or name of the nearest Authorized Distributor, contact your local sales office or:

E-mail: info.sc@honeywell.com

Internet: www.honeywell.com/sensing
