Derating diagram acc. to IEC 60512-5 (Current carrying capacity)

The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals.

The current capacity curve is valid for continuous, non interrupted current loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.

Control and test procedures according to DIN IEC 60512-5

Recommended configuration of plated through holes for press-in termination

In addition to the hot-air-level (HAL), other PCB surfaces are getting more important. Due to their different properties - such as mechanical strength and coefficient of friction - we recommend the following configuration of PCB through holes.

Plating	Drilled hole Ø	Plated hole Ø
Tin plated PCB (HAL) acc. to EN 60352-5	1,15±0,025mm	0,94 - 1,09mm
	Sn	max. 15µm
Chemical tin plated PCB	1,15±0,025mm	1,00 - 1,10mm
	Sn	min. 0,8µm
Gold /Nickel plated PCB	1,15±0,025mm	1,00 - 1,10mm
	Ni	3 - 7µm
Silver plated PCB	1,15±0,025mm	1,00 - 1,10mm
	Ag	0,1 - 0,3µm
Copper plated PCB (OSP)	1,15±0,025mm	1,00 - 1,10mm

Assembly instructions

It is highly recommended to use HARTING press-in tools to ensure a reliable press-in process. Please refer to the catalogue for tools, machines and further information about the press-in process.

Soldering instructions

The connectors should be protected when being soldered in a dip, flow or film soldering bath. Otherwise, they might become contaminated as a result of soldering operations or deformed as a result of overheating. In most cases this is covered by the PCB the connector is going to be soldered to.
