

Evaluates: MAX25222/MAX25222C

MAX25222 Evaluation Kit/ MAX25222 Evaluation System

General Description

The MAX25222 evaluation kit (EV kit) is a fully assembled and tested surface-mount PCB used to evaluate MAX25222/MAX25222C automotive 4-channel TFT-LCD power supply with VCOM Buffer. Each output rail (AVDD, NAVDD, VGON, VGOFF, and VCOM) can be independently adjusted through I²C. The EV kit demonstrates the device's features: adjustable output voltage, fault protection, VCOM temperature compensation, nonvolatile memory programming, and extensive diagnostics to aid in fulfilling ASIL-B safety level.

The EV kit exposes an I²C interface which can operate in conjunction with the MINIQUSB+ adapter or a third party I²C master like a general-purpose microcontroller. The EV kit also includes Windows[®]-compatible software that provides a simple graphical user interface (GUI) for exercising the features of the IC. The EV system includes both the EV kit and the MINIQUSB+ adapter board.

Features

- 2.65V to 5.5V Input Range
- Default Output Voltages
 - 6.8V Output at 200mA (Boost Converter)
 - -6.8V Output at -200mA (Inverting Regulator)
 - 12V Output at 15mA (Positive-Charge Pump Regulator)
 - -10V Output at 15mA (Negative-Charge Pump Regulator)
 - -2.49V Output at 100mA (VCOM Buffer)
- The EV kit components will fit the 2.1MHz frequency. For using 420kHz, HW changes are needed.
- Spread Spectrum
- Dedicated GUI
- Full Sequencing Flexibility
- Proven PCB Layout
- Fully Assembled and Tested

MAX25222 EV Kit Files

FILE	DESCRIPTION
MAX25222GUISetupVxx.exe	Windows GUI Installer

Windows is a registered trademark of Microsoft Corporation.

Quick Start

Required Equipment

- MAX25222 EV kit
- 2.65 to 5.5V, 3A power supply
- Voltmeter
- MINIQUSB+ interface board with USB cable
- User-supplied Windows-compatible PC with a spare USB port

Note: In the following sections, software-related items are identified by bolding. Text in **bold** refers to items directly from the EV kit software. Text in **bold and underlined** refers to items from the Windows operating system.

Procedure

The EV kit is fully assembled and tested. Use the following steps to verify board operations:

Stand Alone

- Verify that shunts are installed across pins 1-2 on jumpers J1–J4. Ensure that J5 has no jumper installed.
- Connect the positive terminal of the power supply to the TFT_POWER_IN pad and the negative terminal to the GND1 PCB pad.
- Set the power supply TFT_POWER_IN at 5V.
- Turn on the power supply.
- Verify that the green LED (DS1) is on.
- Verify that the boost converter (AVDD PCB pad) is 6.8V.
- Verify that the inverting converter (NAVDD PCB pad) is -6.8V.
- Verify that the positive-gate voltage regulator (VGON PCB pad) is +12V.
- Verify that the negative-gate voltage regulator (VGOFF PCB pad) is -10V.
- Verify that the VCOM buffer (VCOM PCB pad) regulator is -2.49V.

[Ordering Information](#) appears at end of data sheet.

MAX25222 Evaluation Kit/ MAX25222 Evaluation System

Evaluates: MAX25222/MAX25222C

I²C Mode

- Visit www.maximintegrated.com/evkitsoftware download the latest version of the EV kit software, MAX25222GUISetupVxx.exe.
- Install the EV kit software (GUI) on your PC by running the MAX25222GUISetupVxx.exe program.
- The EV kit software application installs together with the required MINIQUSB+ drivers.
- Verify that shunts are installed across pins 1-2 on jumpers J1-J3, J7, J9-J11, J17.
- Verify that shunts are installed across pins 2-3 on jumper J12, J5.
- Connect the MINIQUSB+ interface board's P3 header to the J14 header on the EV kit.
- Connect the positive terminal of the power supply to the TFT_POWER_IN pad and the negative terminal to the GND1 PCB pad.
- Set the power supply VIN at 5V.
- Turn on the power supply.
- Verify that the green LED (DS1) is on.
- Launch the EV kit software application.
- From the EV kit software toolbar, select **Device** → **Scan for Address** Verify the ENABLE PIN in the GUI is enabled. The GUI scans the I²C bus for available slave addresses on the bus and selects the first one (in this case, the MAX25222 I²C address with J5 settings: 42H). Press **OK** once the MAX25222/MAX25222C I²C address has been found. [Figure 1](#), is a screen capture of MAX25222 evaluation kit software (GUI).
- Verify that the status bar in the bottom-right corner of the GUI displays **EV Kit: Connected**.
- In the **GENERAL SETTING** group box, press the **START** button.
- In the **INDICATORS** group box, **SEQ_ON** status is green.
- All channels are turned on outputting AVDD 6.8V, NAVDD -6.8V, VGON 12V, VGOFF -10V, VCOM -2.49V.
- For more details on how to use the GUI and all the features available, click on the GUI **Help** menu item.

Evaluates: MAX25222/MAX25222C

Detailed Description of Hardware

Jumper Setting

In the following tables, several jumper settings illustrate features of the MAX25222 EV kit.

Power LED Enable (J1)

A green LED (DS1) is used to indicate that the EV kit is powered on.

The LED can be disconnected from the power supply, allowing precise current-consumption evaluation (see [Table 1](#)).

Fault LED Enable (J2)

A red LED (DS2) is used to indicate a fault condition. The LED can be disconnected from the power supply, allowing precise current-consumption evaluation (see [Table 2](#)).

SCL Pullup (J3)

See [Table 3](#) for jumper functions SCL pullup (J3).

Table 1. Jumper Functions (J1)

SHUNT POSITION	DS1 POWER LED
1-2*	Connected
Open	Disconnected

*Default position.

Table 2. Jumper Functions (J2)

SHUNT POSITION	DS2 FAULT LED
1-2*	Connected
Open	Disconnected

*Default position.

Table 3. Jumper Functions SCL Pullup (J3)

SHUNT POSITION	SCL VOLTAGE PULLUP
1-2*	On-board 1.5kΩ pullup to DVDD
Open	External pullup

*Default position.

Enable (J4)

The MAX25222/MAX25222C IC can be disabled acting on the EN pin, reducing the current consumption to its minimum value. Furthermore, an external digital signal can be used to enable/disable the IC (see [Table 4](#) and [Table 6](#)).

ADD_SEL I²C Slave Address—Mode (J5)

The IC's 7-bit I²C slave address can be selected between two options through the J5 jumper setting (see [Table 5](#)). Additionally, also the stand-alone mode can be selected with this jumper.

External ADD Control (J6)

For future improvement.

Default condition open.

External Enable (J7)

The MAX25222/MAX25222C IC can be enabled or disabled acting GUI command **ENABLE_P** or external digital command (see [Table 6](#)).

Table 4. Jumper Functions Enable (J4)

SHUNT POSITION	MAX25222/MAX25222C
1-2*	Enable
Open**	External control from EN loop on board edge
2-3	Disable

*Default position.

** J7 must be open.

Table 5. Jumper Functions (J5)

SHUNT POSITION	MODE -7-BIT I ² C SLAVE ADDRESS
1-2	I ² C Mode: 0x52
2-3*	I ² C Mode: 0x42
Open	Stand alone

*Default position.

Only for MAX25222C:

I²C Mode: 0x52 Read Only

I²C Mode: 0x42 Read/Write

Table 6. Jumper Functions (J7)

SHUNT POSITION	MAX25222/MAX25222C
1-2*	Enabled from GUI control EN pin
Open	Externally controlled through digital signal (EN at board edge)

*Default position.

** J4 must be open

MAX25222 Evaluation Kit/ MAX25222 Evaluation System

Evaluates: MAX25222/MAX25222C

NVM Programming (J8, J13)

The EV kit is equipped with a low voltage boost regulator able to provide the VPROG voltage (8.5V) needed for NVM programmability. The VPROG is controlled by the GUI and enabled only during the burning procedure. In order to use this feature, J13 jumper must be installed and J8 can be used to select the boost circuitry input voltage (see [Table 7](#) and [Table 8](#)).

FLT (J9)

Allows the fault signal FLTB to be sent to GUI or an external device (see [Table 9](#)).

SCL (J10)

The SCL can be connected to MINIQUSB+ or external device (see [Table 10](#)).

Table 7. Jumper Functions (J8)

SHUNT POSITION	VPROG BOOST INPUT VOLTAGE
1-2	MINIQUSB+ 3.3V
2-3*	VIN

*Default position.

Table 8. Jumper Functions (J13)

SHUNT POSITION	VPROG BOOST OUTPUT VOLTAGE
1-2*	+8.5V power VPROG pin
open	

*Default position.

Table 9. Jumper Functions (J9)

SHUNT POSITION	FLT SIGNAL
1-2*	MINIQUSB+ 3.3V
open	External signal (FLT at board edge)

*Default position.

Table 10. Jumper Functions (J10)

SHUNT POSITION	SCL SIGNAL
1-2*	MINIQUSB+ 3.3V
open	External signal

*Default position.

SDA (J11)

The SDA could be connected to GUI or external device (see [Table 11](#)).

Digital Domain Voltage (J12)

The EV kit exposes open-drain digital signals (FLT, SDA, and SCL) that are pulled up to what is referred as the digital domain voltage.

Digital domain voltage can be selected between the EV kit input voltage (VIN) and the fixed 3.3V provided by the MINIQUSB+. Alternatively, you can force an external voltage as digital reference (see [Table 12](#)).

SDA Pullup (J17)

See [Table 13](#) for jumper functions SDA pullup (J17).

Table 11. Jumper Functions (J11)

SHUNT POSITION	SDA SIGNAL
1-2*	MINIQUSB+ 3.3V
open	External signal

*Default position.

Table 12. Jumper Functions (J12)

SHUNT POSITION	DIGITAL DOMAIN
1-2	MINIQUSB+ 3.3V
2-3*	VIN
Open	Externally provided (DVDD test point)

*Default position.

Table 13. Jumper Functions SDA Pullup (J17)

SHUNT POSITION	SDA VOLTAGE PULLUP
1-2*	On-board 1.5kΩ pullup to DVDD
open	External pullup

*Default position.

MAX25222 Evaluation Kit/ MAX25222 Evaluation System

Evaluates: MAX25222/MAX25222C

VCOM

The VCOM output voltage is programmed using I²C to a value between -2.49V and +1V with output peak currents between ±120mA.

The VCOM output could operate in two different ways.

VCOM without Temperature Compensation (see [Table 14](#)).

VCOM with Temperature Compensation

The VCOM output voltage can be compensated for temperature changes using an external or internal temperature sensors.

For details of how to use the VCOM temperature compensation function, refer to the sections *VCOM Temperature Compensation* and *VCOM Temperature Compensation Example* in the MAX25222/MAX25222C data sheet.

Table 14. VCOM Without Temperature Compensation Registers

REGISTER	DESCRIPTION	
TCOMP_EN	TCOMP_EN bit in the DELAYVCOM_LSB Register [0X08 Bit1]	[0] disables this functionality
VCOM25	Sets the VCOM value between the range define from the registers VCOMMIN and VCOMMAX	
VCOMMIN	Define minimum value of VCOM	
VCOMMAX	Define maximum value of VCOM	

Table 15. VCOM Temperature Compensation Setting Registers

REGISTER	DESCRIPTION	
TCOMP_EN	TCOMP_EN bit in the DELAYVCOM_LSB Register [0X08 Bit 1]	[1] Enable [0] Disable
INT_SEN	int_sensor bit in the CONFIG register [0X07 Bit 7] select the sensor	[0] Internal Sensor [1]* External T Sensor

*Default position.

Ordering Information

PART	TYPE
MAX25222EVKIT#	EV kit
MAX25222EVSYS#	EV system

#Denotes RoHS compliance.

The MAX25222VKIT# and MAX25222EVSYS# are supplied in their standard configuration to evaluate the MAX25222ATJ/V+. To evaluate the MAX25222C, it also necessary to order the MAX25222CATJ/V+.

DAC_STATUS

DAC_STATUS bit does not indicate a fault.

Refer the user to the description of this bit in the data sheet Register [0x04 Bit 3 dac_flg].

VPROG

The EV kit includes a boost converter in order to supply 8.5V, 25mA for programming. To perform non-volatile programming this voltage should be connected to the VPROG pin.

Verify the jumpers status see [Table 7](#) and [Table 8](#).

Using the GUI send a **BURN** command, the VPROG_EN connected to SHDN pin enables the boost converter for a time of 20ms.

All values in registers 0x07 to 0x15 are stored in non-volatile memory.

Table 16. VTEMP Registers

REGISTER	DESCRIPTION
VTEMPL	Voltage at TEMP pin corresponding to low-temperature breakpoint in VCOM compensation curve
VTEMP25	Voltage at TEMP pin at 25°C
VTEMP_H1	Voltage at TEMP pin corresponding to first high-temperature breakpoint in VCOM compensation curve
VTEMP_H2	Voltage at TEMP pin corresponding to second high-temperature breakpoint in VCOM compensation curve

Table 17. VCOM Registers

REGISTER	DESCRIPTION
VCOM_L	Delta VCOM at the temperature corresponding to VTEMP_L. This value sets the difference between the VCOM value at 25°C and that at VTEMP_L
VCOM25	Set the VCOM value at 25°C
VCOM_H1	Delta VCOM at VTEMP_H1. This value sets the difference between the VCOM value at 25°C and that at VTEMP_H1
VCOM_H2	Delta VCOM at VTEMP_H2. This value sets the difference between the VCOM value at VTEMP_H1 and that at VTEMP_H2
