 - The frequency of the ripple current is 100Hz or higher
 - The average current for each cycle does not exceed the maximum allowable DC forward current
 - The maximum amplitude of the ripple does not exceed the maximum peak pulsed forward current

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON IR 2720 Line emitters are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

- A** – designates radiometric power bin (example: J=900 to 950mW, N=1200 to 1300mW)
- B C** – designates peak wavelength bin (example: 8K=845nm to 850nm, 9H=935nm to 940nm)
- D** – designates forward voltage bin (example: U=2.6 to 3.0V, V=3.0 to 3.4V)

Therefore, a LUXEON IR 2720 emitter with a radiometric power range of 1200 to 1300mW, peak wavelength range of 845 to 850nm and a forward voltage range of 2.6 to 3.0V has the following CAT code:

N 8 K U
