

# Precision, Quad, SPST Analog Switches

## General Description

The MAX361/MAX362 are precision, quad, single-pole single-throw (SPST) analog switches. The MAX361 has four normally closed (NC) switches, and the MAX362 has four normally open (NO) switches. Both parts offer low channel on-resistance (less than 85Ω), guaranteed to match within 3Ω between channels and to remain flat over the analog signal range (Δ9Ω max). Both parts also offer low leakage (less than 500pA at +25°C and less than 4nA at +85°C) and fast switching (turn-on time less than 250ns and turn-off time less than 170ns).

The MAX361/MAX362 are fabricated with Maxim's new improved 44V silicon-gate process. Design improvements guarantee extremely low charge injection (10pC), low power consumption (35μW), and electrostatic discharge (ESD) greater than 2000V. The 44V maximum breakdown voltage allows rail-to-rail analog signal handling capability.

These monolithic switches operate with a single positive supply (+10V to +30V) or with split supplies (±4.5V to ±20V) while retaining CMOS-logic input compatibility and fast switching. CMOS inputs provide reduced input loading.

## Applications

Sample-and-Hold Circuits  
Guidance and Control Systems  
Heads-Up Displays  
Test Equipment  
Communications Systems  
Battery-Operated Systems  
PBX, PABX

## Features

- ◆ **Low On Resistance:** < 45Ω Typical (85Ω Max)
- ◆ **Guaranteed Matched On-Resistance Between Channels:** < 2Ω
- ◆ **Guaranteed Flat On-Resistance over Analog Signal Range:** Δ9Ω Max
- ◆ **Guaranteed Charge Injection:** < 10pC
- ◆ **Guaranteed Off-Channel Leakage:** <4nA at +85°C
- ◆ **ESD Guaranteed > 2000V per Method 3015.7**
- ◆ **Single-Supply Operation (+10V to +30V)**  
**Bipolar-Supply Operation (±4.5V to ±20V)**
- ◆ **TTL-/CMOS-Logic Compatible**
- ◆ **Rail-to-Rail Analog Signal Handling Capability**

## Ordering Information

## ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-

V+ .....	44V
GND .....	25V
IN_, COM_, NO_, NC_ .....	(V- - 2V) to (V+ + 2V) or 30mA (whichever occurs first)
Continuous Current (any terminal) .....	30mA
Peak Current COM, NO, NC (pulsed at 1ms, 10% duty cycle max) .....	100mA
ESD .....	2000V
Continuous Power Dissipation (T <sub>A</sub> = +70°C) (Note 1)	

Plastic DIP (derate 10.53mW/°C above +70°C) .....	842mW
Narrow SO (derate 8.70mW/°C above +70°C) .....	696mW
Thin QFN (derate 33.3mW/°C above +70°C) .....	2667mW
CERDIP (derate 10.00mW/°C above +70°C) .....	800mW
Operating Temperature Ranges:	
MAX36_C_ .....	0°C to +70°C
MAX36_E_ .....	-40°C to +85°C
MAX36_MJE .....	-55°C to +125°C
Storage Temperature Range .....	-65°C to +150°C
Lead Temperature (soldering, 10s) .....	+300°C

**Note 1:** All leads are soldered or welded to PC board.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

**Note 2:** The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

**Note 3:** Guaranteed by design.

**Note 4:** On resistance match between channels and flatness are guaranteed only with bipolar-supply operation.

**Note 5:** See Figure 3. Off Isolation =  $20 \log_{10} \left( \frac{V_{COM}}{V_{NC\_} \text{ or } V_{NO\_}} \right)$ , V<sub>COM</sub> = output, V<sub>NC or NO</sub> = input to off switch.

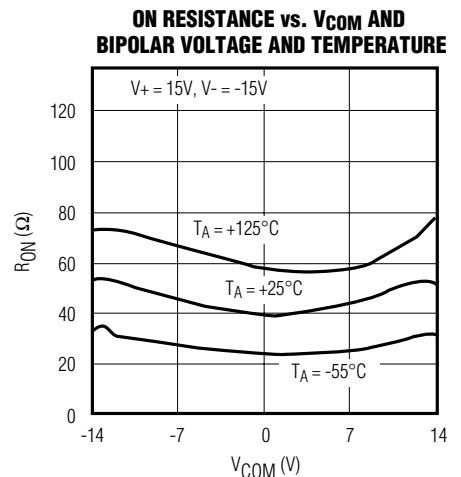

**Note 6:** Between any two switches. See Figure 4.

13	11	V+	Positive-Supply Voltage Input—Connected to Substrate
—	EP	PAD	Exposed Pad—Connect pad to V+

## Applications Information

### Operation with Supply Voltages Other Than $\pm 15V_0$

Using supply voltages other than  $\pm 15V$  reduces the analog signal range. The MAX361/MAX362 switches operate with bipolar supplies of  $\pm 4.5V$  to  $\pm 20V$ . Typical operating characteristic graphs show typical on resistance for  $\pm 15V$ ,  $\pm 10V$ , and  $\pm 5V$  supplies. Switching times increase by a factor of two or more for  $\pm 5V$  operation. The MAX361/MAX362 can also operate from  $+10V$  to  $+30V$  unipolar supplies. Both parts can also be powered from unbalanced supplies such as  $+24V$  and  $-5V$ . Connect V- to  $0V$  when operating with a single supply.

Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings, because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ on first, followed by V-, and logic inputs. If power-supply sequencing is not possible, add two small signal diodes in series with the supply pins for overvoltage protection (Figure 6). Adding the diodes reduces the analog signal range to  $1V$  below V+ and  $1V$  below V-, but low switch resistance and low leakage characteristics are unaffected. Device operation is unchanged, and the difference from V+ to V- should not exceed  $+44V$ .
