LED Based Bulbs
## Quick Reference

Application:

With the technological advancements in Light Emitting Diodes (LEDs) brightness can now rival the incandescent lamp when used in similar packages. These advancements have allowed for a new type of product called the Based LED - an LED with the fit and functionality of an incandescent light bulb

- High reliability - vibration and shock resistant
- Multi-chip, Cluster, and Single Ultra-Bright Chip
- AllnGaP and InGaN die technology
- Polarized and non-polarized
- Single and multi-voltage input

...and many more!

Certifications & Ratings

- RoHS compliant

Considerations:

- Since lens caps act as filters for the light emitted from the based LED, it is important to match the emitting color of the LED. If not matched properly, the overall light output may be substantially reduced. Dialight recommends using transparent lenses, which will optimize the light output.
- Although these lamps can be operated at a lower voltage, which will increase the life, the intensity will be reduced.
- Operation of the based LED at a higher voltage should not exceed 10% above the recommended voltage.
- Dialight does not recommend that based LED lamps be used in neon sockets.

Neon & Incandescent Panel Mount Indicator Part Numbering System

Dialight Neon and Incandescent Panel Mount Indicators are available as complete assemblies from our distributor partners or from us as separate lens cap and base. Our Part Numbering System shown below describes how valid Dialight part numbers are configured. The Dialight Part Numbering System should not be used for creating part numbers since not all combinations are manufacturable. Please consult Dialight or our stocking distributors for those items not found in this catalog.
