

General Multilayer Ceramic Capacitors

MLCC is an electronic part that temporarily stores an electrical charge and the most prevalent type of capacitor today. New technologies have enabled the MLCC manufacturers to follow the trend dictated by smaller and smaller electronic devices such as Cellular telephones, Computers, DSC, DVC

General Features

- Miniature Size
- Wide Capacitance and Voltage Range
- Tape & Reel for Surface Mount Assembly
- Low ESR

Applications

- General Electronic Circuit

② SIZE(mm)

| Code | EIA CODE | Size(mm) |
|------|----------|------------|
| 03 | 0201 | 0.6 × 0.3 |
| 05 | 0402 | 1.0 × 0.5 |
| 10 | 0603 | 1.6 × 0.8 |
| 21 | 0805 | 2.0 × 1.25 |
| 31 | 1206 | 3.2 × 1.6 |
| 32 | 1210 | 3.2 × 2.5 |
| 43 | 1812 | 4.5 × 3.2 |
| 55 | 2220 | 5.7 × 5.0 |

③ CAPACITANCE TEMPERATURE CHARACTERISTIC

| Code | Temperature Characteristics | | | | Temperature Range |
|------|-----------------------------|-----|-----|----------------|-------------------|
| C | Class I | COG | C△ | 0 ± 30(ppm/°C) | -55 ~ +125°C |
| P | | P2H | P△ | -150 ± 60 | |
| R | | R2H | R△ | -220 ± 60 | |
| S | | S2H | S△ | -330 ± 60 | |
| T | | T2H | T△ | -470 ± 60 | |
| U | | U2J | U△ | -750 ± 60 | |
| L | | S2L | S△ | +350 ~ -1000 | |
| A | Class II | X5R | X5R | ± 15% | -55 ~ +85°C |
| B | | X7R | X7R | ± 15% | -55 ~ +125°C |
| X | | X6S | X6S | ± 22% | -55 ~ +105°C |
| F | | Y5V | Y5V | +22 ~ -82% | -30 ~ +85°C |

※ Temperature Characteristic

| Temperature Characteristics | Below 2.0pF | 2.2 ~ 3.9pF | Above 4.0pF | Above 10pF |
|-----------------------------|-------------|-------------|-------------|------------|
| C△ | C0G | C0G | C0G | C0G |
| P△ | - | P2J | P2H | P2H |
| R△ | - | R2J | R2H | R2H |
| S△ | - | S2J | S2H | S2H |
| T△ | - | T2J | T2H | T2H |
| U△ | - | U2J | U2J | U2J |

J : ±120PPM/°C, H : ±60PPM/°C, G : ±30PPM/°C

④ NOMINAL CAPACITANCE

Nominal capacitance is identified by 3 digits.

The first and second digits identify the first and second significant figures of the capacitance.

The third digit identifies the multiplier. 'R' identifies a decimal point.

● Example

| Code | Nominal Capacitance |
|------|--------------------------|
| 1R5 | 1.5pF |
| 103 | 10,000pF, 10nF, 0.01 μF |
| 104 | 100,000pF, 100nF, 0.1 μF |

⑤ CAPACITANCE TOLERANCE

| Code | Tolerance | Nominal Capacitance |
|------|---------------------|------------------------------------|
| A | $\pm 0.05\text{pF}$ | Less than 10pF (Including 10pF) |
| B | $\pm 0.1\text{pF}$ | |
| C | $\pm 0.25\text{pF}$ | |
| D | $\pm 0.5\text{pF}$ | |
| F | $\pm 1\text{pF}$ | |
| F | $\pm 1\%$ | More than 10pF |
| G | $\pm 2\%$ | |
| J | $\pm 5\%$ | |
| K | $\pm 10\%$ | |
| M | $\pm 20\%$ | |
| Z | +80, -20% | |

⑥ RATED VOLTAGE

| Code | Rated Voltage | Code | Rated Voltage |
|------|---------------|------|---------------|
| R | 4.0V | D | 200V |
| Q | 6.3V | E | 250V |
| P | 10V | G | 500V |
| O | 16V | H | 630V |
| A | 25V | I | 1,000V |
| L | 35V | J | 2,000V |
| B | 50V | K | 3,000V |
| C | 100V | | |

7 THICKNESS OPTION

| Size | Code | Thickness(T) | Size | Code | Thickness(T) |
|------------|-----------|--------------|------------|----------|--------------|
| 0201(0603) | 3 | 0.30±0.03 | 1812(4532) | F | 1.25±0.20 |
| 0402(1005) | 5 | 0.50±0.05 | | H | 1.6±0.20 |
| 0603(1608) | 8 | 0.80±0.10 | | I | 2.0±0.20 |
| 0805(2012) | A | 0.65±0.10 | | J | 2.5±0.20 |
| | C | 0.85±0.10 | | L | 3.2±0.30 |
| | F | 1.25±0.10 | 2220(5750) | F | 1.25±0.20 |
| Q | 1.25±0.15 | H | | 1.6±0.20 | |
| Y | 1.25±0.20 | I | | 2.0±0.20 | |
| 1206(3216) | C | 0.85±0.15 | | J | 2.5±0.20 |
| | F | 1.25±0.15 | | L | 3.2±0.30 |
| | H | 1.6±0.20 | | | |
| 1210(3225) | F | 1.25±0.20 | | | |
| | H | 1.6±0.20 | | | |
| | I | 2.0±0.20 | | | |
| | J | 2.5±0.20 | | | |
| | V | 2.5±0.30 | | | |

8 PRODUCT & PLATING METHOD

| Code | Electrode | Termination | Plating Type |
|----------|-----------|-------------|--------------|
| A | Pd | Ag | Sn_100% |
| N | Ni | Cu | Sn_100% |
| G | Cu | Cu | Sn_100% |

9 SAMSUNG CONTROL CODE

| Code | Description of the code | Code | Description of the code |

Note1. Initial Measurement For Class II

Perform the heat treatment at $150^{\circ}\text{C} \pm 0/-10^{\circ}\text{C}$ for 1 hour. Then Leave the capacitor in ambient condition for 48 ± 4 hours before measurement. Then perform the measurement.

Note2. Latter Measurement

1. CLASS I

Leave the capacitor in ambient condition for 24 ± 2 hours before measurement

Then perform the measurement.

2. Class II

Perform the heat treatment at $150^{\circ}\text{C} \pm 0/-10^{\circ}\text{C}$ for 1 hour. Then Leave the capacitor in ambient condition for 48 ± 4 hours before measurement.

Then perform the measurement.

▶ CAPACITANCE - TEMPERATURE CHARACTERISTICS

▶ CAPACITANCE - DC VOLTAGE CHARACTERISTICS

▶ CAPACITANCE CHANGE - AGING

▶ IMPEDANCE - FREQUENCY CHARACTERISTICS

● STORAGE CONDITION

▶ Storage Environment

The electrical characteristics of MLCCs were degraded by the environment of high temperature or humidity. Therefore, the MLCCs shall be stored in the ambient temperature and the relative humidity of less than 40°C and 70%, respectively.

Guaranteed storage period is within 6 months from the outgoing date of delivery.

▶ Corrosive Gases

Since the solderability of the end termination in MLCC was degraded by a chemical atmosphere such as chlorine, acid or sulfide gases, MLCCs must be avoid from these gases.

▶ Temperature Fluctuations

Since dew condensation may occur by the differences in temperature when the MLCCs are taken out of storage, it is important to maintain the temperature-controlled environment.

● DESIGN OF LAND PATTERN

When designing printed circuit boards, the shape and size of the lands must allow for the proper amount of solder on the capacitor.

The amount of solder at the end terminations has a direct effect on the crack.

The crack in MLCC will be easily occurred by the tensile stress which was due to too much amount of solder. In contrast, if too little solder is applied, the termination strength will be insufficiently.

Use the following illustrations as guidelines for proper land design.

Recommendation of Land Shape and Size.

● ADHESIVES

When flow soldering the MLCCs, apply the adhesive in accordance with the following conditions.

▶ Requirements for Adhesives

They must have enough adhesion, so that, the chips will not fall off or move during the handling of the circuit board.

They must maintain their adhesive strength when exposed to soldering temperature.

They should not spread or run when applied to the circuit board.

They should harden quickly. They should not corrode the circuit board or chip material.

They should be a good insulator. They should be non-toxic, and not produce harmful gases, nor be harmful when touched.

▶ Application Method

It is important to use the proper amount of adhesive. Too little and much adhesive will cause poor adhesion and overflow into the land, respectively.

unit : mm

| Type | 21 | 31 |
|------|----------------------|----------------------|
| a | 0.2 min | 0.2 min |
| b | 70~100 μm | 70~100 μm |
| c | > 0 | > 0 |

▶ Adhesive hardening Characteristics

To prevent oxidation of the terminations, the adhesive must harden at 160°C or less, within 2 minutes or less.

● MOUNTING

▶ Mounting Head Pressure

Excessive pressure will cause crack to MLCCs. The pressure of nozzle will be 300g maximum during mounting.

► Bending Stress

When double-sided circuit boards are used, MLCCs first are mounted and soldered onto one side of the board. When the MLCCs are mounted onto the other side, it is important to support the board as shown in the illustration. If the circuit board is not supported, the crack occur to the ready-installed MLCCs by the bending stress.

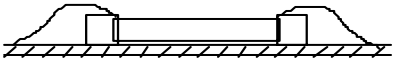

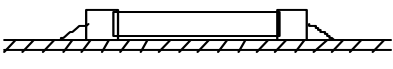

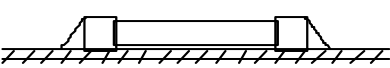

► Manual Soldering

Manual soldering can pose a great risk of creating thermal cracks in chip capacitors.

The hot soldering iron tip comes into direct contact with the end terminations, and operator's carelessness may cause the tip of the soldering iron to come into direct contact with the ceramic body of the capacitor.

Therefore the soldering iron must be handled carefully, and close attention must be paid to the selection of the soldering iron tip and to temperature control of the tip.

► Amount of Solder

| | | |
|-------------------|---|--|
| Too much Solder |  | Cracks tend to occur due to large stress |
| Not enough Solder |  | Weak holding force may cause bad connections or detaching of the capacitor |
| Good |  | |

► **Cooling**

Natural cooling using air is recommended. If the chips are dipped into solvent for cleaning, the temperature difference(ΔT) must be less than 100°C

► **Cleaning**

If rosin flux is used, cleaning usually is unnecessary. When strongly activated flux is used, chlorine in the flux may dissolve into some types of cleaning fluids, thereby affecting the chip capacitors. This means that the cleaning fluid must be carefully selected, and should always be new.

► **Notes for Separating Multiple, Shared PC Boards.**

A multi-PC board is separated into many individual circuit boards after soldering has been completed. If the board is bent or distorted at the time of separation, cracks may occur in the chip capacitors. Carefully choose a separation method that minimizes the bending of the circuit board.

► **Recommended Soldering Profile**

Flow

Soldering Iron

| Variation of Temp. | Soldering Temp (°C) | Pre-heating Time (Sec) | Soldering Time(Sec) | Cooling Time(Sec) |
|---------------------|---------------------------------|------------------------|---------------------|-------------------|
| $\Delta T \leq 130$ | $300 \pm 10^\circ \text{C max}$ | ≥ 60 | ≤ 4 | - |

| Condition of Iron facilities | | |
|------------------------------|--------------|----------------|
| Wattage | Tip Diameter | Soldering Time |
| 20W Max | 3mm Max | 4 Sec Max |

*** Caution - Iron Tip Should Not Contact With Ceramic Body Directly.**
