

# 300mA Low Dropout Linear Regulator

## ■ FEATURES

- Low Dropout Voltage of 470mV at 300mA Output Current (3.0V Output Version).
- Guaranteed 300mA Output Current.
- Maximum Input Voltage is 8V
- Low Ground Current at 55 $\mu$ A.
- 2% Accuracy Output Voltage of 1.5V/1.8V/ 2.0V /2.5V /2.7V/ 3.0V/ 3.3V/ 3.5V/ 3.7V/ 3.8V/ 5.0V/ 5.2V.
- Needs only 1 $\mu$ F for Stability.
- Current and Thermal Limiting.

## ■ APPLICATIONS

- Voltage Regulator for CD-ROM Drivers.
- Voltage Regulator for LAN Cards.
- Voltage Regulator for Microprocessor.
- Wireless Communication Systems.
- Battery Powered Systems.

## ■ TYPICAL APPLICATION CIRCUIT

**Low Dropout Linear Regulator**

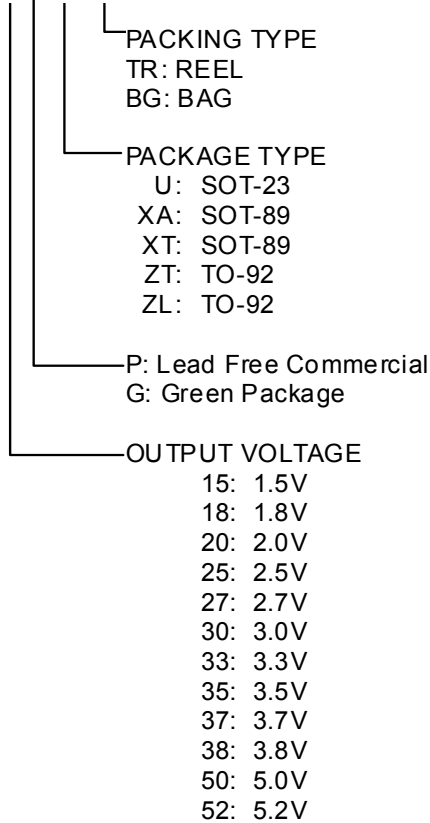

## ■ DESCRIPTION

The AIC1722A is a 3-pin low dropout linear regulator. The superior characteristics of the AIC1722A include zero base current loss, very low dropout voltage, and 2% accuracy output voltage. Typical ground current remains approximately 55 $\mu$ A, from no load to maximum loading conditions. Dropout voltage at 300mA output current is exceptionally low. Output current limiting and thermal limiting are built in to provide maximal protection to the AIC1722A against fault conditions.

The AIC1722A comes in the popular 3-pin SOT-89, TO-92 and SOT-23 packages.

**ORDERING INFORMATION**

AIC1722A-XXXXX XX

Example: AIC 1722A-18PXATR  
 → 1.8V Version, in SOT-89 Package & Tape & Reel Packing Type(lead free)

AIC 1722A-18GXATR  
 → 1.8V Version, in SOT-89 Lead Free Package & Tape & Reel Packing Type (green)

PIN CONFIGURATION	
SOT-23 (U) TOP VIEW 1: GND 2: VOUT 3: VIN	
SOT-89 (XA) TOP VIEW 1: GND 2: VIN 3: VOUT	
SOT-89 (XT) TOP VIEW 1: VOUT 2: GND 3: VIN	
TO-92 (ZTBG) TOP VIEW 1: GND 2: VIN 3: VOUT  * Straight lead option available in bag packing type only. * Refer to physical dimensions for lead pitch.	
TO-92 (ZTTR) TOP VIEW 1: GND 2: VIN 3: VOUT  * Formed lead option available in reel packing type. * Refer to physical dimensions for lead pitch.	
TO-92 (ZLBG) TOP VIEW 1: VIN 2: GND 3: VOUT  * Straight lead option available in bag packing type only. * Refer to physical dimensions for lead pitch.	
TO-92 (ZLBG) TOP VIEW 1: VIN 2: GND 3: VOUT  * Formed lead option available in reel packing type. * Refer to physical dimensions for lead pitch.

		$1.4\text{V}\leq V_{OUT}\leq 1.9\text{V}$	1260	1360	
Ground Current	$I_O=0.1\text{mA}\sim I_{MAX}$ $1.4\text{V}\leq V_{OUT}\leq 3.9\text{V}$ $V_{IN}=5\sim 8\text{V}$		55	80	$\mu\text{A}$
	$4.0\text{V}\leq V_{OUT}\leq 5.2\text{V}$ $V_{IN}=7\sim 8\text{V}$		55	80	
Thermal Shutdown Hysteresis	Guaranteed by design		20		$^\circ\text{C}$

Note 1: To avoid output oscillation, aluminum electrolytic output capacitor is recommended and ceramic capacitor is not suggested.

Note 2: Specifications are production tested at  $T_A=25^\circ\text{C}$ . Specifications over the  $-40^\circ\text{C}$  to  $85^\circ\text{C}$  operating temperature range are assured by design, characterization and correlation with Statistical Quality Controls (SQC).

Note 3: Regulation is measured at constant junction temperature, using pulse testing with a low ON time.

Note 4: Current limit is measured by pulsing a short time.

Note 5: Dropout voltage is defined as the input to output differential at which the output voltage drops 100mV below the value measured with a 1V differential.

## ■ APPLICATION INFORMATION

### INPUT-OUTPUT CAPACITORS

Linear regulators require input and output capacitors to maintain stability. Input capacitor at 1 $\mu$ F with 1 $\mu$ F aluminum electrolytic output capacitor is recommended.

### POWER DISSIPATION

The AIC1722A obtains thermal-limiting circuitry, which is designed to protect the device against overload condition. For continuous load condition, maximum rating of junction temperature must not be exceeded. It is important to pay more attention in thermal resistance. It includes junction to case, junction to ambient. The maximum power dissipation of AIC1722A depends on the thermal resistance of its case and circuit board, the temperature difference between the die junction and ambient air, and the rate of airflow. The rate of temperature rise is greatly affected by the mounting pad configuration on the PCB, the board material, and the ambient temperature. When the IC mounting with good thermal

conductivity is used, the junction temperature will be low even when large power dissipation applies.

The power dissipation across the device is

$$P = I_{OUT} (V_{IN} - V_{OUT}).$$

The maximum power dissipation is:

$$P_{MAX} = \frac{(T_{J-max} - T_A)}{R\theta_{JA}}$$

Where  $T_{J-max}$  is the maximum allowable junction temperature (125°C), and  $T_A$  is the ambient temperature suitable in application.

As a general rule, the lower temperature is, the better reliability of the device is. So the PCB mounting pad should provide maximum thermal conductivity to maintain low device temperature.

GND pin performs a dual function for providing an electrical connection to ground and channeling heat away. Therefore, connecting the GND pin to ground with a large pad or ground plane would increase the power dissipation and reduce the device temperature.
