Instructions for mounting on the PCBI Follow the instructions shown below when mounting on the PCB. [Caution] -Refer to recommended layouts on the page 1 for PCB and stencil pattern. -Shorter pattern width than the recommended PCB dimension, could cause solder wicking and/or flux penetration. -Larger pattern than the recommended stencil dimension could cause solder wicking and/or flux penetration. -Clearance underneath the contact and the housing is very small. In case solder resist and/or silk screening are applied on PCB underneath the connector. verify the thickness, or it could push up the connector bottom and may cause soldering defect and/or insufficient fillet formation. -Apply reflow temperature profile within the specified conditions. In individual applications, the actual temperature may vary, depending on solder paste type volume/thickness and PCB size/thickness. В Consult your solder paste and equipment manufacturer for specific recommendations. -Prevent warpage of PCB, where possible, since it can cause soldering failure even with 0.1 mm max coplanarity. -When mounting on the flexible board. please make sure to put a stiffener on the backside of the flexible board. We recommend a glass epoxy material with the thickness of 0.3 mm min. -Do not add 0.5 N or greater external force when unreel or pick and place the connector etc. or it may get broken. | Instructions for PCB handling after mounting the connector | Follow the instructions shown below when mounting on the PCB. [Caution] - ·Splitting a large PCB into several pieces Screwing the PCB Avoid the handling described above so that no force is exerted on the PCB during the assembly process Otherwise, the connector may become defective. -The warp of a 100 mm wide PCB should be 0.5 mm or less. The warp of PCB suffers stress on connector and the connector may become defective. (Example 37) Example 37 5 MAX Connector 0 D 5 MAX Connector $\dot{}$ 100 | Instructions on manual soldering Follow the instructions shown below when soldering the connector manually during repair work, etc. [Caution] -Do not perform manual soldering with the FPC inserted into the connector.
-Do not heat the connector excessively. Be very careful not to let the soldering iron contact any parts other than connector leads. Otherwise, the connector may be deformed or melt.

—Do not supply excessive solder (or flux). If excessive solder (or flux) is supplied on the terminals or chucking metals, solder or flux may adhere to the contacts or rotating parts of the actuator, resulting in poor contact or a rotation failure of the actuator. Supplying excessive solder to the chucking metals may hinder actuator rotation. resulting in breakage of the connector.
