

UMFT232HPEV-S Sink Module

Datasheet

Version 1.0

Issue Date: 01-12-2021

Use of FTDI devices in life support and/or safety applications is entirely at the user's risk, and the user agrees to defend, indemnify and hold FTDI harmless from any and all damages, claims, suits or expense resulting from such use.

1 Introduction

UMFT232HPEV-S Sink Module Board is a high speed USB Type-C to Multipurpose UART/JTAG/SPI/I2C serial interface module with single Type-C™ USB PD port.

Figure 1 - UMFT232HPEV-S Sink Module

The module has 47mm x 32mm dimensions, with single Type-C power delivery port incorporated into it. The port serves only as a sink port. EEPROM is not mounted in this module, As such the port supports the following configuration:

- 5V power delivery object (PDO) profiles - as defined in revision 3.0 of the USB Power Delivery specification when connected to PD chargers.
- Offers USB data transmission with default USB power capability when connected to non PD PC host.

GPIO pins are used to provide indication via LEDs whether module is connected to PD charger or USB2.0 host as well as to control the load switch.

1.1 Features

1. Single Type-C™ USB PD sink only ports that support USB data communication which is USB 2.0 compliant
2. Supports bus-powered operation.
3. LED indicators for PWREN#, SUSPEND# signals (optional), System Power, 5V 3A profile and USB2.0 Vbus
4. Test points for core and CC voltages.

2 Typical Applications

- Rapid USB integration into existing electronic systems
- Prototyping platform for USB interface on new system
- USB Bridge with Type-C/PD3.0 (chargers and devices).
- Up to 15W power application delivery via USB PD and/or Type-C port.
- USB to multi-port JTAG, SPI and I2C interfaces
- USB to multi-port asynchronous serial interfaces

2.1 Driver Support

The FT232HP requires USB drivers (listed below), available free from <https://www.ftdichip.com>, which are used to make the FT232HP appear as a virtual COM port (VCP). This allows the user to communicate with the USB interface via a standard PC serial emulation port (for example TTY). Another FTDI USB driver, the D2XX driver, can also be used with application software to directly access the FT232HP through a DLL.

Royalty free VIRTUAL COM PORT (VCP) DRIVERS for...

- Windows 11 (Desktop 32,64-bit & Universal 64-bit)
- Windows 10 32,64-bit
- Windows 8/8.1 32,64-bit
- Windows 7 32,64-bit
- Windows Server 2008 and server 2012 R2
- Mac OS
- Linux 2.4 and greater

Royalty free D2XX Direct Drivers (USB Drivers + DLL S/W Interface)

- Windows 11 (Desktop 32,64-bit & Universal 64-bit)
- Windows 10 32,64-bit
- Windows 8/8.1 32,64-bit
- Windows 7 32,64-bit
- Windows Server 2008 and server 2012 R2
- Mac OS
- Linux 2.4 and greater
- Android(J2xx)

For driver installation, please refer to the installation guides on our website:

<https://ftdichip.com/document/installation-guides/>

2.2 USB Bridge Features

For information on USB Bridge features, please refer to [FT233HP Datasheet](#).

3 Electrical Details

The UMFT232HPEV-S Sink Module Board is a 47mm by 32mm 4-layered printed circuit board.

The key features are labelled in Figure 2 and Figure 3 and are detailed in Section 3.1.

Figure 2 - UMFT232HPEV-S Sink Module – Top Board View

Figure 3 - UMFT232HPEV-S Sink Module – Bottom Board View

3.1 Key Features

1. Single PD USB Type-C sink only ports.
2. LEDs indication for the USB, Power Source and PDO profiles
3. Connector for functional interface
4. DC-DC converters for FT232HPQ and other circuits

3.2 Power

The UMFT232HPEV-S Sink Module board provides power source that is 3.46V for FT232HPQ and most other circuits on the board. The reason why 3.46V is needed for FT232HPQ is due to the addition of schottky diode between VCC_PD/PD1_Vconn and VCC33 to prevent CC leakage during initial attach when the chip is not yet fully powered up.

Refer to section 4.15.5 of FT232HPQ datasheet for more detail. The power source is derived from bus power via PD1 port.

3.3 GPIO

The GPIOs from FT232HPQ are used to control the load switch as well as setting the PD power profile used during PD negotiation between the charger and the charging device.

3.4 Connectors

Connectors CN3, CN4 and for functional interface are detailed in Table 1 and Table 2.

Connector Pin	Name	Description
CN3-1	ADBUS0	FT232HPQ ADBUS0 pin
CN3-2	ADBUS1	FT232HPQ ADBUS1 pin
CN3-3	ADBUS2	FT232HPQ ADBUS2 pin
CN3-4	ADBUS3	FT232HPQ ADBUS3 pin
CN3-5	ADBUS4	FT232HPQ ADBUS4 pin
CN3-6	ADBUS5	FT232HPQ ADBUS5 pin
CN3-7	ADBUS6	FT232HPQ ADBUS6 pin
CN3-8	ADBUS7	FT232HPQ ADBUS7 pin
CN3-9	GPIO0	FT232HPQ GPIO0 pin
CN3-10	GPIO1	FT232HPQ GPIO1 pin
CN3-11	GPIO2	FT232HPQ GPIO2 pin
CN3-12	GPIO3	FT232HPQ GPIO3 pin
CN3-13	CN3-13	To provide 3.46V to this pin, short the solder jumper JP1
CN3-14	NC	NC
CN3-15	GND	Ground

Table 1 - Connector Pin Details of CN3

Connector Pin	Name	Description
CN4-1	ACBUS0	FT232HPQ ACBUS0 pin
CN4-2	ACBUS1	FT232HPQ ACBUS1
CN4-3	ACBUS2	FT232HPQ ACBUS2
CN4-4	ACBUS3	FT232HPQ ACBUS3
CN4-5	ACBUS4	FT232HPQ ACBUS4
CN4-6	ACBUS5	FT232HPQ ACBUS5
CN4-7	ACBUS6	FT232HPQ ACBUS6
CN4-8	ACBUS7	FT232HPQ ACBUS7
CN4-9	ACBUS8	FT232HPQ ACBUS8
CN4-10	ACBUS9	FT232HPQ ACBUS9
CN4-11	RESET#	FT232HPQ RESET# pin
CN4-12	PD_OUT	Output from PD1 Q1 load switch
CN4-13	PD_OUT	Output from PD1 Q1 load switch
CN4-14	GND	Ground
CN4-15	GND	Ground

Table 2 - Connector Pin Details of CN4

3.5 Schematics

Figure 4 to Figure 8 show the various elements of the schematics.

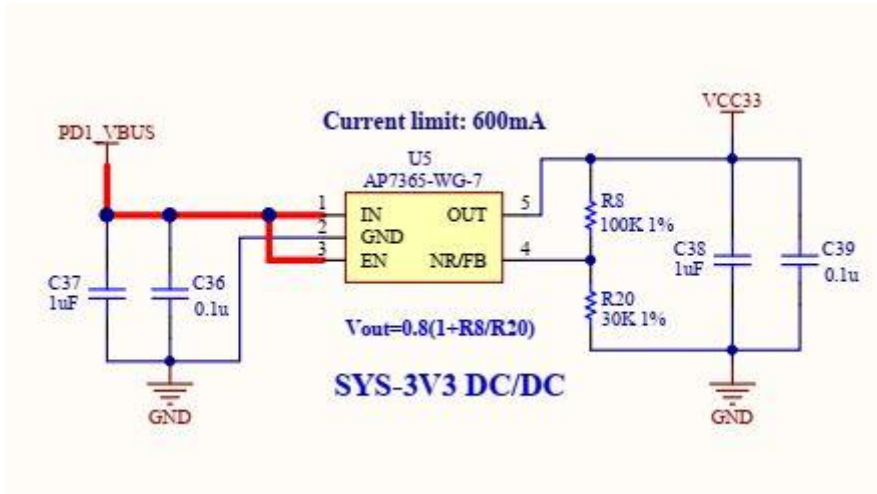

Figure 4 – DC to DC Converter for 3.46V

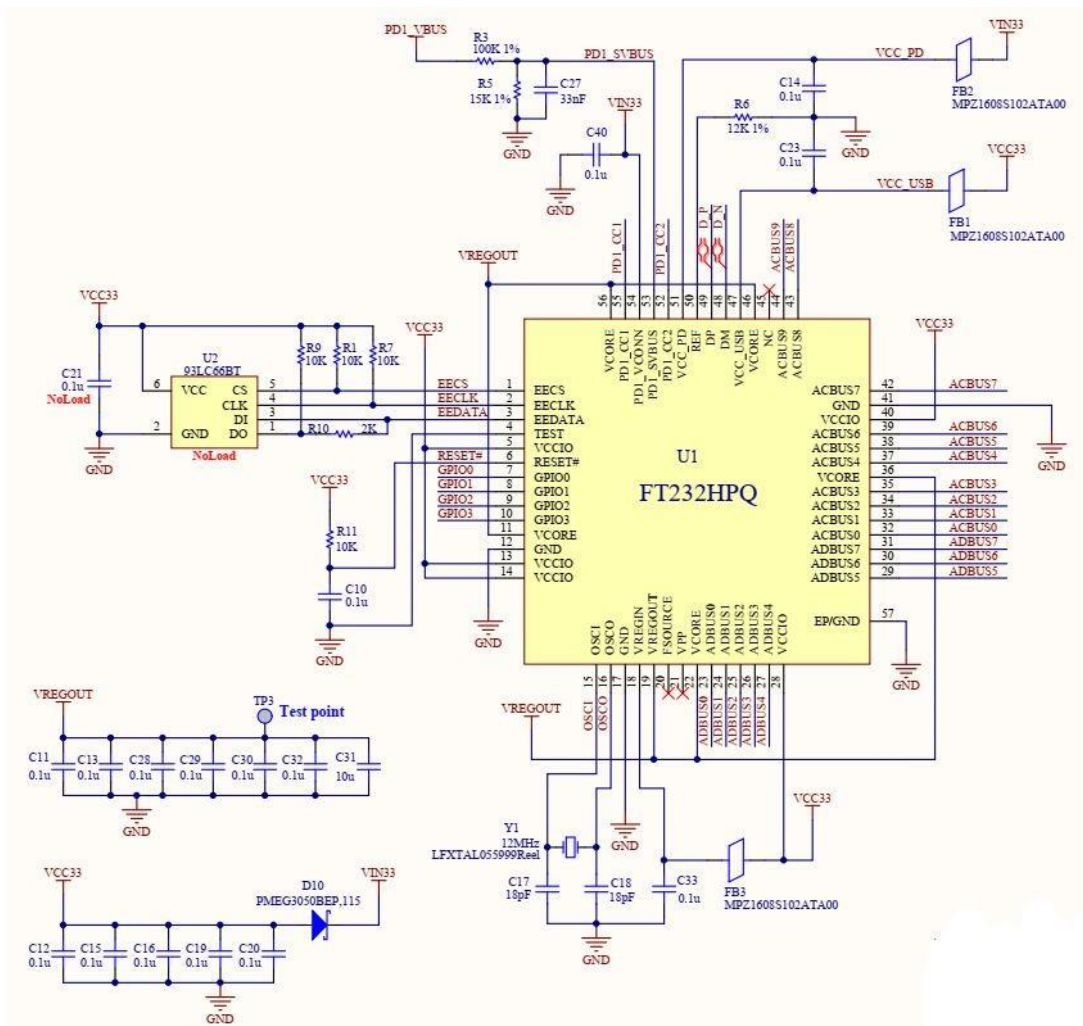

Figure 5 – FT232HPQ

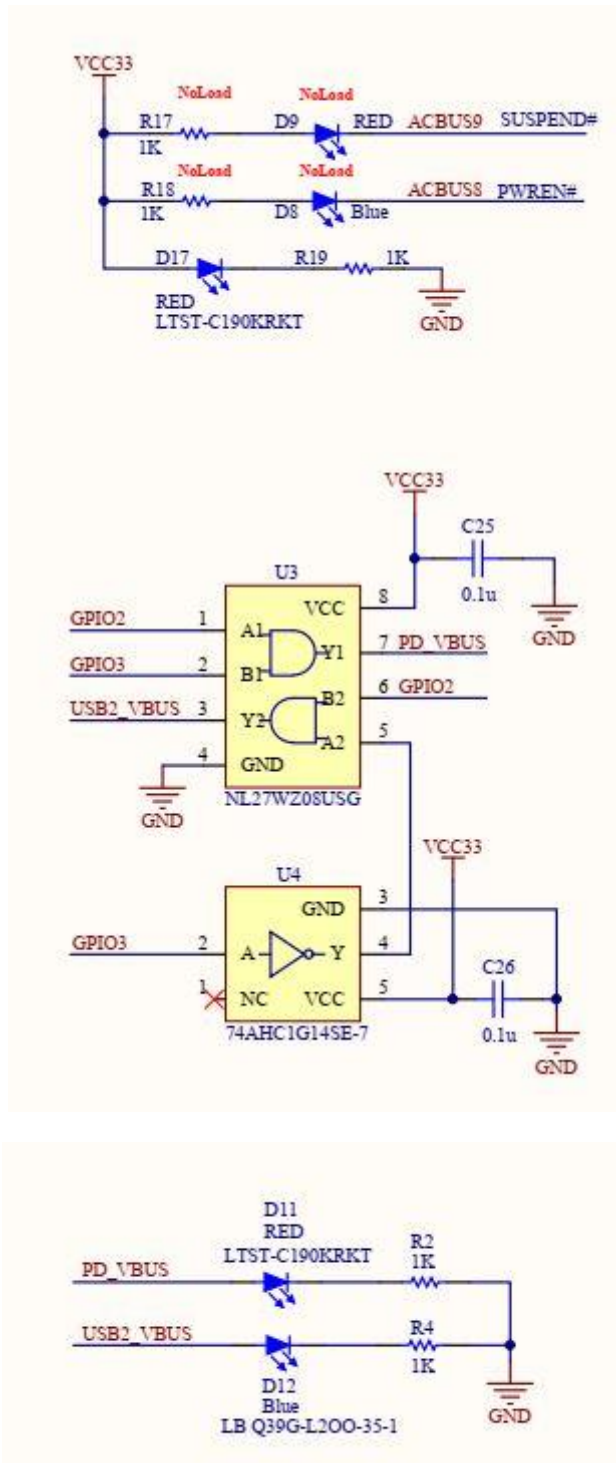

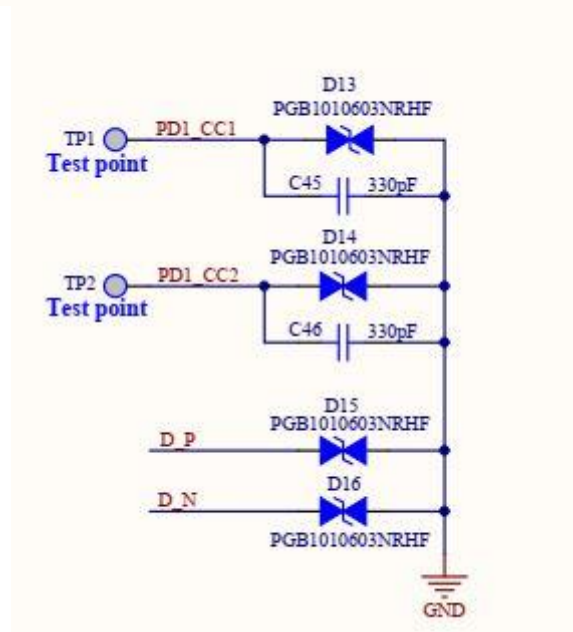

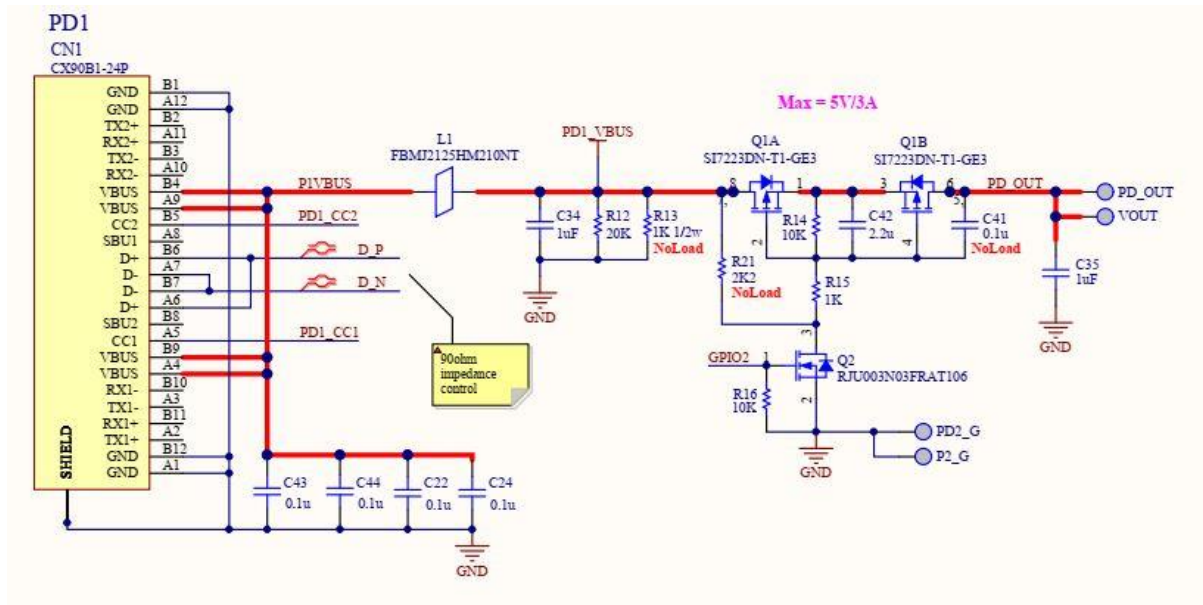

Figure 6 – PD Profile Decoding logic and LED driver Circuit for power, GPIO and USB activity

Figure 7 – PD1 Port and Load Switch

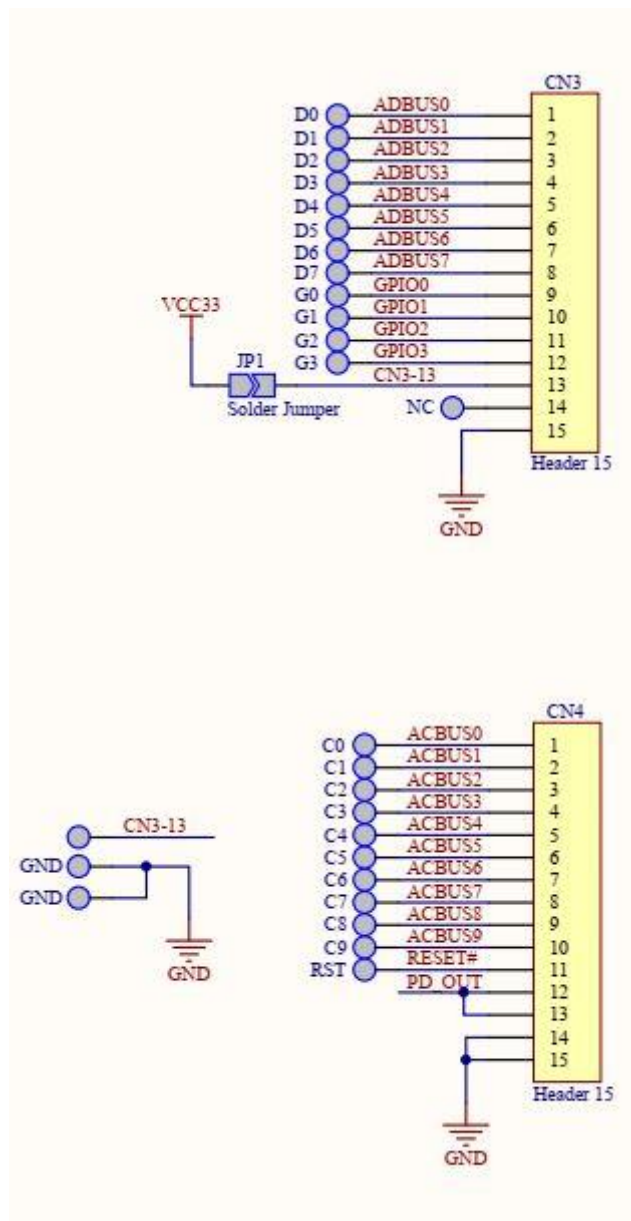

Figure 8 – Interface and Connectors

4 Power Delivery Functional Configuration

4.1 Sink

Sink is feature where PD can be configured as sink mode when attached to a PD charger or other PD devices to provide power to the modules connected to the board. Figure 9 and Figure 10 shows two user scenarios in UMFT232HPEV-S.

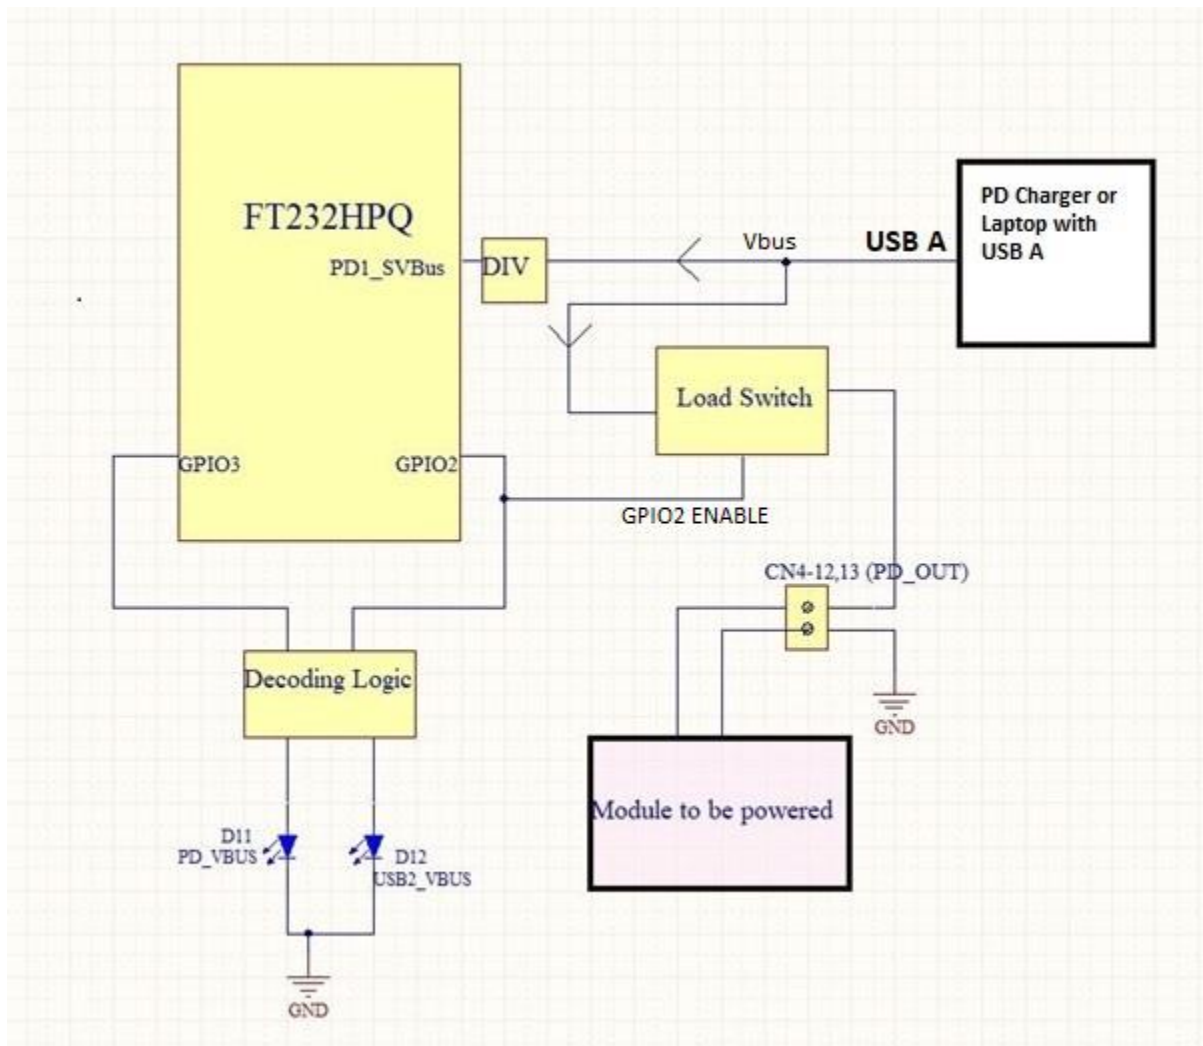

Figure 9 – Sink Block Diagram (“Module PD1 Port” sink power from “Charger USB-A”)

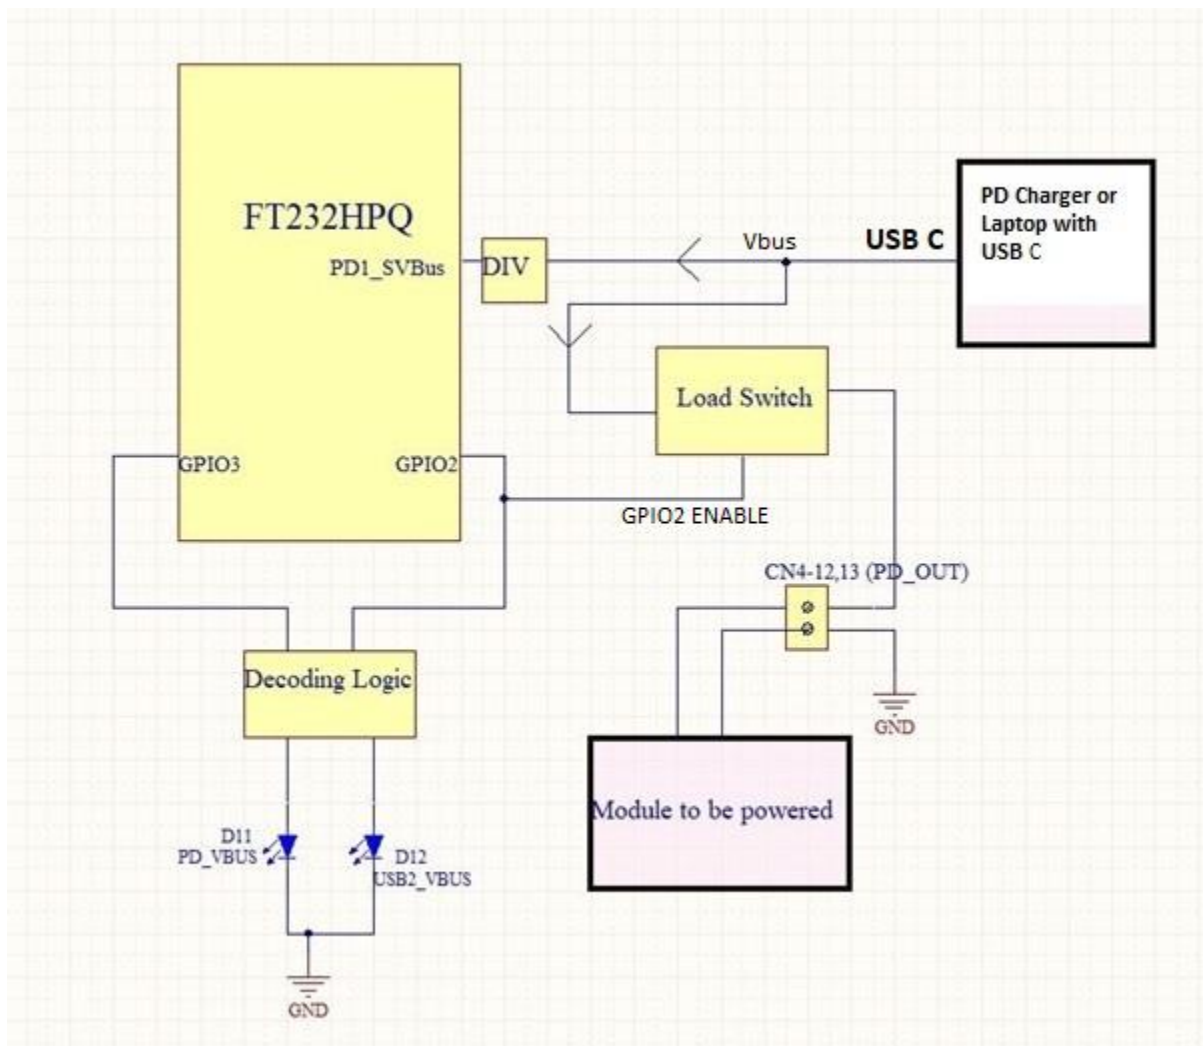

Figure 10 – Sink Block Diagram (“Module PD1 Port” sink power from “Charger USB-C”)

Sink Configuration

Figure 9 shows the first scenario where “Laptop/Charger USB A” connects to “Module USB C”. In this case, the decoding logic will drive USB2_VBus LED on based on the state of the GPIO2 and GPIO3 signifying that Vbus is at default 500mA. Also load switch is turned on by the assertion of GPIO2 to route the 5V to the CN4 pin12, 13 where it can be used to power the external module.

Figure 10 shows the 2nd scenario where “Laptop/Charger USB C” connects to “Module USB C”. In this case, the decoding logic will drive PD_VBus LED on based on the state of GPIO2 and GPIO3 signifying Vbus is at 5V, 3A. Also load switch is turned on by the assertion of GPIO2 to route the 5V to the CN4 pin12, 13 where it can be used to power the external module

Table 3 shows the state of the GPIOs and LEDs based on the above two scenario.

GPIO2	GPIO3	D11 LED (PD_VBUS)	D12 LED (USB2_VBUS)	PD Port Configuration
High	Low	Off	On	To non PD PC Host
High	High	On	Off	To PD PC host or PD charger

Table 3 - State of the GPIOs and LEDs

5 Mechanical Details
