DATEL's DMS-20PC-0/5 Series are the world's smallest, full-featured, 0-5V input process control monitors. Their large, easy-to-read, 0.37”/9.4mm LED displays are available in a choice of 4 LED color/intensity options: standard red, standard green, super-bright red, and low-power red. Two power supply input ranges are also available: the industry-standard +5V and a wide-range +5V to +40V (which typically draws 9mA at +24V).

Gain (span) and offset (zero) adjustments are performed with on-board, precision, 20-turn potentiometers. All decimal-point and range-change selections are made on an 8-position, vibration-resistant, gold-plated DIP switch. Unlike competitive meters, there are no jumpers or solder gaps to open or close, and to further enhance reliability, the entire assembly utilizes 100% soldered connections. Both power-supply and input-signal connections are made via reliable screw-type terminal blocks.

The DMS-20PC-0/5’s DIP switch and potentiometers accommodate hundreds of input-voltage/output-reading combinations. This practically eliminates the need for more costly, long-lead-time, factory “specials” in applications which use several different-range meters. A supplied bezel assembly—including metal fasteners and a rubber gasket—simplifies panel mounting and also provides excellent resistance to environmental dust and moisture. All these outstanding features combine to make the DMS-20PC-0/5 the perfect meter for prototype and OEM, 0-5V input, process control monitoring.

**FEATURES**

- Accepts 0-5V and 0-10V inputs
- Large, easy-to-read, 0.37”/9.4mm LED display
- Choice of 5 LED power/color options
- High input impedance, 100kΩ
- +5V to +40V model draws 9mA typ.
- Miniature size: 1.38” x 1.25” x 0.95”
- High-quality, 20-turn, span (gain) and zero (offset) adjustments
- DIP-switch selectable range and decimal points
- Vibration-resistant package; Reliable screw-terminal input connections
- Hundreds of different input/readout combinations

**SIMPLIFIED SCHEMATIC DIAGRAM**

OPERATING AND SETUP INSTRUCTIONS

As shipped, the DMS-20PC-0/5 is factory calibrated to read “000” for a 0.0V input and “1999” for a 5.0V input. The following worst-case procedure assumes the DMS-20PC-0/5 is completely mis-adjusted, i.e., both potentiometers and the DIP switches are randomly set.

1. Set R7 (full scale span/gain adjust) and R3 (zero/offset adjust) fully clockwise, roughly 22 turns, and place SW1-SW8 to OFF (down position).

2. Select DIP switch setting #1 in Table 1.

3. Apply a precision 0.0V input and adjust R3 until the meter’s display reads “000”.

4. Apply a precision 5.0V input and adjust R7 until the meter’s display reads “1999”. Repeat steps 3 and 4 to make sure the adjustments do not affect one another.

5. Select the appropriate decimal point by setting SW6, SW7 or SW8 to ON (DP1, DP2 or DP3 respectively).

Ordering Information

DMS-20PC-0/5-5RS-C +5V supply, standard-intensity red LED’s
DMS-20PC-0/5-5GS-C +5V supply, standard-intensity green LED’s
DMS-20PC-0/5-5BS-C +5V supply, bright blue LED’s
DMS-20PC-0/5-5RL-C +5V supply, low-power red LED’s
DMS-20PC-0/5-5RH-C +5V supply, high-intensity red LED’s
DMS-20PC-0/5-24RL-C +5V to +40V supply, low-power red LED’s

DM2-20-CP Panel cutout punch

Note: A DMS-BZL4 bezel assembly with a sealing gasket is supplied with each meter.
Examples (0-5V Inputs)

1. Desired display readings are:
   - 0.0V input = "0.00"
   - 5.0V input = "6.00"

   Use DIP-switch setting #3 in Table 1 and enable decimal point DP2 via SW7. Apply 0.0V and adjust R3 so the display reads "0.00". Apply 5.0V and adjust R7 so the display reads "6.00".

2. Desired display readings are:
   - 0.0V input = "000"
   - 5.0V input = "800"

   Use DIP-switch setting #2 in Table 1. Apply 0.0V and adjust R3 so the display reads "000". Apply 5.0V and adjust R7 so the display reads "800". For these display readings, no decimal points are used. Set SW6, SW7 and SW8 to OFF.

3. Desired display readings are:
   - 0.0V input = "0.000"
   - 5.0V input = "2.500"

   Use DIP-switch setting #5 in Table 1 and enable decimal point DP1 via SW6. Apply 0.0V and adjust R3 so the display reads "000". Apply 5.0V and adjust R7 so the display reads "2.500".

The DMS-20PC-0/5 is optimized for handling 5V signal ranges that are positioned between −0.1V and +6.0V. As such, input ranges can be anywhere between −0.1V to +4.9V and +1.0V to +6.0V as long as their full range is 5 Volts. The meter’s zero/offset potentiometer (R3) has enough adjustment range to produce a "000" display reading for input signal levels between −0.1V and +1.0V.

Please note the DMS-20PC digital panel meter from which the DMS-20PC-0/5 is derived has an accuracy specification of ±2 counts (max.). Thus, it may not always be possible to obtain the exact desired display readings.

4. Desired display readings are:
   - 1.0V input = "000"
   - 6.0V input = "090"

   Even though this input is positioned between +1.0V and +6.0V, it still meets the 5V full scale input range listed in the Functional Specifications section. Use DIP-switch setting #8 in Table 1. Apply 1.0V and adjust R3 so the display reads "000". Apply 6.0V and adjust R7 so the display reads "090". With this type of input, it is advisable to recheck both input levels to be sure the potentiometer settings do not affect one another.

0-10V Inputs

While the DMS-20PC-0/5 is optimized for operation with 0-5V inputs, its versatile input stage can also accommodate most 0-10V applications. The meter’s zero/offset potentiometer (R3) has enough adjustment range to produce a "000" display reading with input signal levels between −0.1V and +1.0V. Table 2. summarizes the available ranges when the DMS-20PC-0/5 is used with 0-10V inputs.

Example (0-10V Inputs)

1. Desired display readings are:
   - 0.0V input = "000"
   - 10.0V input = "500"

   Use DIP switch setting #4 in Table 2. Apply 0.0V and adjust R3 so the display reads "000". Apply 10.0V and adjust R7 so the display reads "500".
