

+ BALL SCREWS - INTERCHANGEABLE

Ball Screws – Interchangeable

As one of the world's leading manufacturers of rolling bearings, linear technology components and steering systems, we can be found on almost every continent – with production facilities, sales offices and technology centres – because our customers appreciate short decision-making channels, prompt deliveries and local service.

The NSK company

NSK commenced operations as the first Japanese manufacturer of rolling bearings back in 1916. Ever since, we have been continuously expanding and improving not only our product portfolio but also our range of services for various industrial sectors. In this context, we develop technologies in the fields of rolling bearings, linear systems, components for the automotive industry and mechatronic systems. Our research and production facilities in Europe, Americas and Asia are linked together in a global technology

network. Here we concentrate not only on the development of new technologies, but also on the continuous optimisation of quality – at every process stage.

Among other things, our research activities include product design, simulation applications using a variety of analytical systems and the development of different steels and lubricants for rolling bearings.

Trademarks on this catalogue

All NSK product and service names listed in this catalogue are trademarks or registered trademarks of NSK Ltd.

NSK developed the 'Ball screws – interchangeable' series based on many years of experience and with the help of the most advanced technology. The series complies 100% with DIN 69051. The spindle nut and spindle shaft are available separately and are universally exchangeable. The new 'Ball screws – interchangeable' series features an extreme reduction in noise and can be used in high-speed applications. As an option, the NSK K1 lubrication unit, proven in use over many years, can be integrated.

Features

- › Nut and shaft are completely interchangeable
- › 100% DIN-compliant
- › High-speed/low-noise nut design

Remarkable improvement in sealing performance (introduction of grease-retaining seal)

- › Grease retention capabilities substantially enhanced
- › Assists clean environment maintenance due to minimum grease scattering
- › Superb sealing capabilities in contaminated environments

Maintenance-free long-term with NSK K1 lubrication unit

- › NSK K1 is a lubrication unit which combines oil and resin in a single unit
- › The porous resin contains a large amount of lubrication oil
- › Touching its surface to the raceway of a shaft close to the NSK K1 contact point constantly supplies fresh oil which seeps out of the resin
- › NSK K1 lubrication has been accepted in many industrial fields since 1996

Accuracy grade

- › An accuracy grade of Ct7 is available

Grade	Ct7
ep: Tolerance on specified travel	$ep = \pm \frac{L}{300} \cdot V_{300}$ (mm) L: Overall length of screw shaft
Travel variation in a 300 mm range (anywhere in useful travel)	0.052 mm
Repeatability	0.003 mm
Clearance	0.020 mm to light preload

Options

- › Support unit (sold separately)
- › NSK provides the support bearing units which go with the ball screw shafts
- › The bearing journal configurations of the screw shaft are provided on the following pages

Ball Screws – Interchangeable

Screw shaft end configuration service

It is possible to have customised modifications of our ball screws implemented quickly and reliably by our service.

The following services can be provided as an alternative:

- › Modification of ball screws based on a desired configuration
- › End machining
- › Change in preload
- › Fitting of various wipers and lubrication systems
- › Fit holes
- › Tap holes
- › Coatings
- › Special packing
- › Customised production
- › Production even in the smallest lot sizes of 1-50 units
- › Individual and special production

Please request these optional services from NSK separately.
