

ProLight PBSD-12JLA-KC 12W UV Power LED Technical Datasheet Version: 1.0

# Prolight Opto ® ProEngine Series

#### **Features**

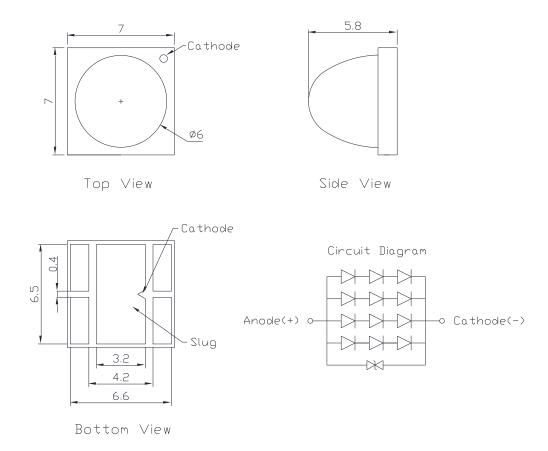

- ·Best thermal material solution of the world
- ·RoHS compliant
- ·View angle 48°

#### **Main Applications**

- **·Disinfection**
- Phototherapy
- ·Bio-Analysis/Detection

#### **Emitter Mechanical Dimensions**

#### Notes:

- 1. The cathode side of the device is denoted by the chamfer on the part body.
- 2. Electrical insulation between the case and the board is required. Do not electrically connect either the anode or cathode to the slug.
- 3. Drawing not to scale.
- 4. All dimensions are in millimeters.
- 5. Unless otherwise indicated, tolerances are  $\pm$  0.10mm.
- 6. Please do not solder the emitter by manual hand soldering, otherwise it will damage the emitter.
- 7. Please do not use a force of over 3kgf impact or pressure on the lens of the LED, otherwise it will cause a catastrophic failure.
- \*The appearance and specifications of the product may be modified for improvement without notice.

# Flux Characteristics at 400mA, T<sub>J</sub> = 25°C

| Radiation  | Color | Part Number   | Radiometric Power (mW) |         |
|------------|-------|---------------|------------------------|---------|
| Pattern    | 33.3. | Emitter       | Minimum                | Typical |
| Lambertian | UVC   | PBSD-12JLA-KC | 100                    | 120     |

- ProLight maintains a tolerance of ± 10% on flux and power measurements.
- Please do not drive at rated current more than 1 second without proper heat sink.

### Electrical Characteristics at 400mA, T<sub>j</sub> = 25°C

|       | F    | orward Voltage V | <sub>F</sub> (V) | Thermal Resistance      |  |
|-------|------|------------------|------------------|-------------------------|--|
| Color | Min. | Тур.             | Max.             | Junction to Slug (°C/W) |  |
| UVC   | 15   | 18               | 21               | 2                       |  |

ProLight maintains a tolerance of ± 0.1V for Voltage measurements.

### Optical Characteristics at 400mA, T<sub>1</sub> = 25°C

|            |       |        |                                |        | Total<br>included<br>Angle | Viewing<br>Angle   |
|------------|-------|--------|--------------------------------|--------|----------------------------|--------------------|
| Radiation  | Color | Pea    | Peak Wavelength λ <sub>P</sub> |        | (degrees)                  | (degrees)          |
| Pattern    |       | Min.   | Тур.                           | Max.   | θ <sub>0.90V</sub>         | 2 θ <sub>1/2</sub> |
| Lambertian | UVC   | 265 nm | 275 nm                         | 280 nm | 60                         | 48                 |

• ProLight maintains a tolerance of ± 3nm for dominant wavelength measurements.

#### **Absolute Maximum Ratings**

| Parameter   | UVC                                       |  |
|---|---|--|
| DC Forward Current (mA)                                   | 600                                       |  |
| ESD Sensitivity (HBM per MIL-STD-883E Method 3015.7)      | ±4000V                                    |  |
| LED Junction Temperature                                  | 85°C                                      |  |
| Operating Board Temperature at Maximum DC Forward Current | -40°C - 60°C                              |  |
| Storage Temperature                                       | -40°C - 85°C                              |  |
| Soldering Temperature                                     | JEDEC-J-STD-020D                          |  |
| Allowable Reflow Cycles                                   | 3   |  |
| Reverse Voltage   | Not designed to be driven in reverse bias |  |

#### **Peak Wavelength Bin Structure**

| Color | Bin Code | Minimum Peak<br>Wavelength (nm) | Maximum Peak<br>Wavelength (nm) |
|-------|----------|---------------------------------|---------------------------------|
| LIVO  | A        | 265                             | 270                             |
| UVC   | B<br>C   | 270<br>275                      | 275<br>280                      |

<sup>•</sup> ProLight maintains a tolerance of ± 3nm for peak wavelength measurements.

#### **Forward Voltage Bin Structure**

| Color | Bin Code | Minimum Voltage (V) | Maximum Voltage (V) |
|-------|----------|---------------------|---------------------|
|       | A        | 15                  | 16.5                |
| UVC   | В        | 16.5                | 18                  |
| UVC   | С        | 18                  | 19.5                |
|       | D        | 19.5                | 21                  |

<sup>•</sup> ProLight maintains a tolerance of ± 0.1V for Voltage measurements.

Note: Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.

## **During Storage**

| Conditions |                | Temperature | Humidity | Time               |
|------------|----------------|-------------|----------|--------------------|
| Storage    | Before Opening | 5°C ~ 30°C  | < 50%RH  | Within 1 Year from |
|            | Aluminum Bag   | 5 C ~ 30 C  | < 30%K⊓  | the Delivery Date  |
|            | After Opening  | 5°C ~ 30°C  | < 60%RH  | ≤ 672 hours        |
|            | Aluminum Bag   |             |          | 2 072 Hours        |
| Baking     |                | 65 ± 5°C    | < 10%RH  | 10 ~ 24 hours      |

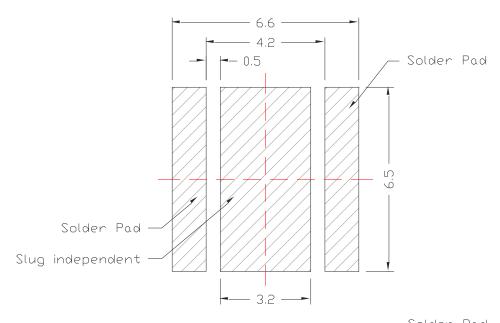

- The standard soak time includes a default value of 24 hours for semiconductor manufature's exposure time (MET) between bake and bag and includes the maximum time allowed out of the bag at the distributor's facility.
- Table below presents the moisture sensitivity level definitions per IPC/JEDEC's J-STD-020D.

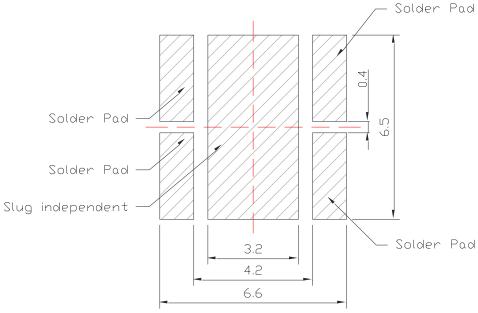

# **Recommended Solder Pad Design**

**Standard Emitter** 

#### TYPE A.

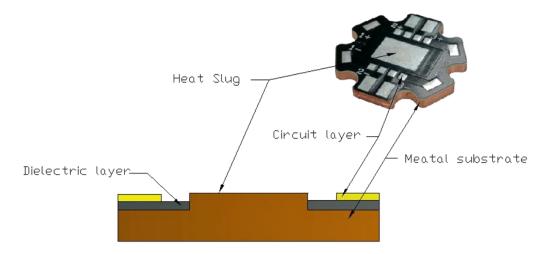

#### TYPE B.

- All dimensions are in millimeters.
- Electrical isolation is required between Slug and Solder Pad.
- The solder area must cover more than 80% of the solder pad and slug after soldering.
   (Voids in solder joint should be less than 20%)

# **Recommended MCPCB Design**

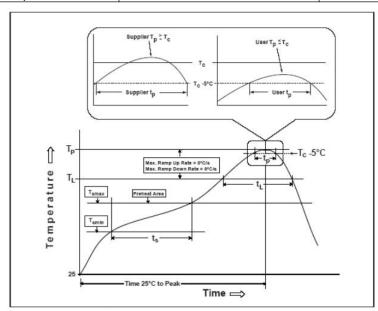

- Copper(Cu) substrate is recommended.
- The thermal conductivity of dielectric layer in the Aluminum(Al) substrate is greater or equal than 6w/mk.
- If the thermal conductivity of dielectric layer equal to 2w/mk, the power consumption should be lower than 20w.

#### **Reflow Soldering Condition**

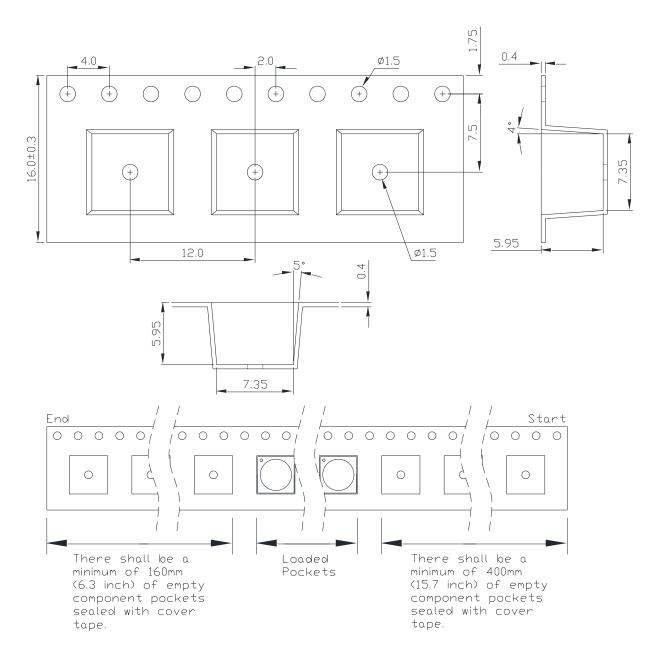

| Profile Feature  | Sn-Pb Eutectic Assembly | Pb-Free Assembly  |
|--|-------------------------|-------------------|
| Average Ramp-Up Rate                                   | 3°C / second max.       | 3°C / second max. |
| $(T_{Smax} \text{ to } T_{P})$                         | 5 Cy second maxi        | 5 67 second maxi  |
| Preheat  |                         |                   |
| <ul><li>– Temperature Min (T<sub>Smin</sub>)</li></ul> | 100°C                   | 150°C             |
| <ul><li>– Temperature Max (T<sub>Smax</sub>)</li></ul> | 150°C                   | 200°C             |
| – Time (t <sub>Smin</sub> to t <sub>Smax</sub> )       | 60-120 seconds          | 60-120 seconds    |
| Time maintained above:                                 |                         |                   |
| – Temperature (T <sub>L</sub> )                        | 183°C                   | 217°C             |
| – Time (t <sub>L</sub> )                               | 60-150 seconds          | 60-150 seconds    |
| Peak/Classification Temperature (T <sub>P</sub> )      | 235°C                   | 250°C             |
| Time Within 5°C of Actual Peak                         | 10-20 seconds           | 20-30 seconds     |
| Temperature (t <sub>p</sub> )                          | To-zo seconds           | 20-50 seconds     |
| Ramp-Down Rate   | 6°C/second max.         | 6°C/second max.   |
| Time 25°C to Peak Temperature                          | 6 minutes max.          | 8 minutes max.    |

- We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.
- Do not use solder pastes with post reflow flux residue>47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.
- All temperatures refer to topside of the package, measured on the package body surface.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a double-head soldering iron should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- Reflow soldering should not be done more than three times.
- When soldering, do not put stress on the LEDs during heating.
- After soldering, do not warp the circuit board.

## **Emitter Reel Packaging**

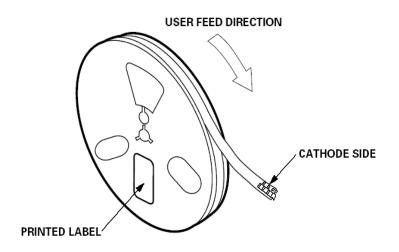

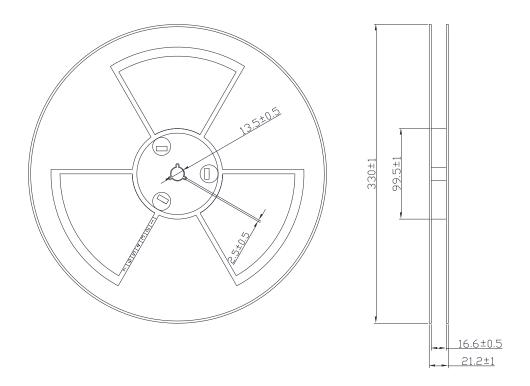

#### Notes:

- 1. Drawing not to scale.
- 2. All dimensions are in millimeters.
- 3. Unless otherwise indicated, tolerances are  $\pm$  0.10mm.

# **Emitter Reel Packaging**

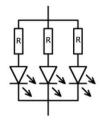

#### Notes:

- 1. Empty component pockets sealed with top cover tape.
- 2. 250, 500 and 750 pieces per reel.
- 3. Drawing not to scale.
- 4. All dimensions are in millimeters.

#### **Precaution for Use**

- Storage
  - Please do not open the moisture barrier bag (MBB) more than one week. This may cause the leads of LED discoloration. We recommend storing ProLight's LEDs in a dry box after opening the MBB. The recommended storage conditions are temperature 5 to 30 °C and humidity less than 40% RH. It is also recommended to return the LEDs to the MBB and to reseal the MBB.
- LEDs are ESD (electrostatic discharge) sensitive; static electricity and surge voltages seriously damage UV LEDs and can result in product failure
  - (1) Ensure that tools, jigs and machines being used are properly grounded
  - (2) LED mounting equipment should include protection against voltage surge
  - (3) Use proper ESD protection, including grounded wrist straps, ESD footwear and clothes
- We recommend using the M705-S101-S4 solder paste from SMIC (Senju Metal Industry Co., Ltd.) for lead-free soldering.
- Do not use solder pastes with post reflow flux residue>47%. (58Bi-42Sn eutectic alloy, etc) This kind of solder pastes may cause a reliability problem to LED.
- Different products have different forward voltage and radiant power. In the circuit design, the distribution
  of current and voltage should be considered to avoid exceeding the maximum rated parameters of this
  product. In order to ensure the best use, it is recommended to assign a resistor in series to each emitter
  in the matrix circuit.

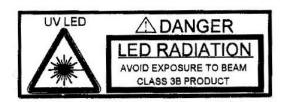

- Any mechanical force or any excess vibration shall not be accepted to apply during cooling process to normal temperature after soldering.
- Please avoid rapid cooling after soldering.
- Components should not be mounted on warped direction of PCB.
- Repairing should not be done after the LEDs have been soldered. When repairing is unavoidable, a heat plate should be used. It should be confirmed beforehand whether the characteristics of the LEDs will or will not be damaged by repairing.
- This device should not be used in any type of fluid such as water, oil, organic solvent and etc. When cleaning is required, isopropyl alcohol should be used.
- When the LEDs are illuminating, operating current should be decide after considering the package maximum temperature.
- The appearance, specifications and flux bin of the product may be modified for improvement without notice. Please refer to the below website for the latest datasheets. http://www.prolightopto.com/

## **Eye Safety Guidelines**

- During operation, the LED emits high intensity ultraviolet (UV) light, which is harmful to skin and eyes. UV light is hazardous to skin and may cause cancer. Avoid exposure to UV light when LED is operational. Precautions must be taken to avoid looking directly at the UV light without the use of UV light protective glasses. Do not look directly at the front of the LED or at the LED's lens when LED is operational.
- Attach warning labels on products/systems that use UV LEDs.

#### **Use Handling of Quartz Lens LEDs**

Notes for handling of quartz lens LEDs

- Please do not use a force of over 3kgf impact or pressure on the quartz lens, otherwise it will cause a catastrophic failure.
- The LEDs should only be picked up by making contact with the sides of the LED body.
- Avoid touching the quartz lens especially by sharp tools such as Tweezers.
- Avoid leaving fingerprints on the quartz lens.
- Please store the LEDs away from dusty areas or seal the product against dust.
- When populating boards in SMT production, there are basically no restrictions regarding the form of the pick and place nozzle, except that mechanical pressure on the quartz lens must be prevented.
- Please do not mold over the quartz lens with another resin. (epoxy, urethane, etc)
