

# HC3

## High current power inductors

### Product description

- Compact footprint
- Designed for high density, high current/low voltage applications
- Foil technology that adds higher reliability factor over the traditional magnet wire used for higher frequency circuit designs
- Inductance range from 0.50uH to 6.52uH
- Current range from 30 to 120 Amps
- Ferrite core material

### Applications

- Distributed power systems DC-DC converters
- General-purpose low voltage supplies
- Computer systems
- Servers
- Point of Load (POL) converters
- Industrial Equipment

### Environmental data

- Storage temperature range (component): -40°C to +125°C
- Operating temperature range: -40°C to +125°C (ambient plus self-temperature rise)
- Solder reflow temperature: J-STD-020D compliant.

### Packaging

- Supplied in bulk packaging, 24 parts per tray

- OCL (Open Circuit Inductance) Test parameters: 300kHz, .25Vrms, 0.0ADC & Isat.
- DC current for approximately ΔT of 40°C without core loss De-rating is necessary for AC currents. PCB layout, trace thickness and width, air flow and proximity of other heat generating components will affect temperature rise. It is recommended that the temperature of the part not exceed 125°C under worst case conditions verified in the end application.

- Peak current for approximately 30% rolloff (@20°C).
- Applied Volt-Time product (V-μs) across the inductor. This value represents the applied V-μs at 300kHz necessary to generate a core loss equal to 10% of the total losses for a 40°C temperature rise.
- Part number definition - HC3-xxx-R:  
HC3 = Product code and size  
-xxx = Inductance value R = Decimal point (if no "R" is present, last character equals number of zeros)  
-R Suffix = RoHS compliant
