

## AFBR-S4N44P163

### 4×4 NUV-HD Silicon Photo Multiplier Array

#### Description

The Broadcom® AFBR-S4N44P163 is a 4×4 Silicon Photo Multiplier (SiPM) array used for ultra-sensitive precision measurements of single photons. The pitch of SiPMs is 4 mm in both directions. High packing density of the single chips is achieved using through-silicon-via (TSV) technology. Larger areas can be covered with a pitch of 16 mm by tiling multiple AFBR-S4N44P163 arrays almost without any edge losses. The passivation layer is made by a glass highly transparent down to UV wavelengths, resulting in a broad response in the visible light spectrum with high sensitivity towards blue- and near-UV region of the light spectrum. The array is best suited for the detection of low-level pulsed light sources, especially for detection of Cherenkov- or scintillation light from the most common organic (plastic) and inorganic scintillator materials (for example, LSO, LYSO, BGO, NaI, CsI, BaF, LaBr). This product is lead free and compliant with RoHS and REACH.
