

FEATURES

Frequency range: 21.2 GHz to 23.6 GHz

Typical gain of >22.5 dB

Low noise input

Noise figure

3.3 dB typical at 21.2 GHz

3.4 dB typical at 23.6 GHz

High linearity input

≥1.0 dBm typical input third-order intercept (IIP3)

−8 dBm input 1 dB compression point (P1dB) at 23.6 GHz

Matched 50 Ω single-ended input

Matched 100 Ω differential outputs

8-lead, 2.00 mm × 2.00 mm LFCSP microwave packaging

APPLICATIONS

Point to point microwave radios

Instrumentation

Satellite communications (SATCOM)

Phased arrays

GENERAL DESCRIPTION

The ADL5726 is a narrow-band, high performance, low noise amplifier (LNA) targeting microwave radio link receiver designs. The monolithic silicon germanium (SiGe) design is optimized for microwave radio link bands ranging from 21.2 GHz to 23.6 GHz. The unique design offers a single-ended 50 Ω input impedance and provides a 100 Ω balanced differential output that is ideal for driving Analog Devices, Inc., differential downconverters and radio frequency (RF) sampling analog-to-

FUNCTIONAL BLOCK DIAGRAM

Figure 1.

14320-001

digital converters (ADCs). This LNA provides noise figure performance that, in the past, required more expensive three-five (III-V) compounds process technology to achieve.

The ADL5721 and ADL5723 to ADL5726 family of narrow-band LNAs are each packaged in a tiny, thermally enhanced, 2.00 mm × 2.00 mm LFCSP package. The ADL5721 and ADL5723 to ADL5726 family operates over the temperature range of −40°C to +85°C.

ABSOLUTE MAXIMUM RATINGS

Table 3.

Parameter	Rating
Supply Voltages	
VCC1	2.25 V
VCC2	4.1 V
Maximum Junction Temperature	150°C/W
Operating Temperature Range	-40°C to +85°C
Storage Temperature Range	-55°C to +125°C
Lead Temperature Range (Soldering, 60 sec)	-65°C to +150°C

Stresses at or above those listed under Absolute Maximum Ratings may cause permanent damage to the product. This is a stress rating only; functional operation of the product at these or any other conditions above those indicated in the operational section of this specification is not implied. Operation beyond the maximum operating conditions for extended periods may affect product reliability.

THERMAL RESISTANCE

θ_{JA} is thermal resistance, junction to ambient (°C/W), θ_{JB} is thermal resistance, junction to board (°C/W), and θ_{JC} is thermal resistance, junction to case (°C/W).

Table 4. Thermal Resistance

Package Type	θ_{JA} ¹	θ_{JB} ¹	θ_{JC} ¹	Unit
8-Lead LFCSP	39.90	23.88	3.71	°C/W

¹ See JEDEC standard JESD51-2 for additional information on optimizing the thermal impedance for a printed circuit board (PCB) with 3 × 4 vias.

ESD CAUTION

ESD (electrostatic discharge) sensitive device. Charged devices and circuit boards can discharge without detection. Although this product features patented or proprietary protection circuitry, damage may occur on devices subjected to high energy ESD. Therefore, proper ESD precautions should be taken to avoid performance degradation or loss of functionality.

PIN CONFIGURATION AND FUNCTION DESCRIPTIONS

NOTES

1. DNC = DO NOT CONNECT. DO NOT CONNECT TO THIS PIN.
2. THE EXPOSED PAD MUST BE SOLDERED TO A LOW IMPEDANCE GROUND PLANE.
3. THE DEVICE NUMBER ON THE FIGURE DOES NOT INDICATE THE LABEL ON THE PACKAGE. REFER TO THE PIN 1 INDICATOR FOR THE PIN LOCATIONS.

14320-002

Figure 2. Pin Configuration

Table 5. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	VCC1	1.8 V Power Supply. It is recommended to place the decoupling capacitors as close to this pin as possible.
2	GND	Ground.
3	INPT	RF Input. This is a 50 Ω single-ended input.
4	RBIAS	Resistor Bias. For typical operation, connect a 442 Ω resistor from RBIAS to GND. It is recommended to place the RBIAS resistor as close to the pin as possible.
5	DNC	Do Not Connect. Do not connect to this pin.
6, 7	OUTP, OUTN	RF Outputs. These pins are 100 Ω differential outputs.
8	VCC2	3.3 V Power Supply. It is recommended to place the decoupling capacitors as close to this pin as possible.
	EPAD (EP)	Exposed Pad. The exposed pad must be soldered to a low impedance ground plane.

THEORY OF OPERATION

The [ADL5726](#) is a narrow-band, high performance, low noise amplifier targeting microwave radio link receiver designs. The monolithic SiGe design is optimized for microwave radio link bands ranging from 21.2 GHz to 23.6 GHz.

The unique design of the [ADL5726](#) offers a single-ended 50 Ω input impedance via the INPT pin, and provides a 100 Ω balanced differential output via the OUTP and OUTN pins.

This LNA is ideal for driving Analog Devices differential downconverters and RF sampling ADCs.

The [ADL5726](#) provides cost-effective noise figure performance without requiring more expensive III-V compounds process technology.

The [ADL5726](#) is available in a 2.00 mm \times 2.00 mm LFCSP package, and operates over the temperature range of -40°C to $+85^{\circ}\text{C}$.

APPLICATIONS INFORMATION

LAYOUT

Solder the exposed pad on the underside of the ADL5726 to a low thermal and electrical impedance ground plane. This pad is typically soldered to an exposed opening in the solder mask on the evaluation board. Connect the ground vias to all other ground layers on the evaluation board to maximize heat dissipation from the device package.

Figure 13. Evaluation Board Layout for the ADL5726 Package

DIFFERENTIAL vs. SINGLE-ENDED OUTPUT

This section provides the test results that compare the ADL5726 using a differential vs. single-ended output. When using the device as a single-ended output, use the RFOP output of the evaluation board and terminate RFON to 50 Ω. Note that the converse can be done as well; however, doing so produces slightly different results from the plots shown in this section because there is some amplitude imbalance between the two differential ports, RFOP and RFON. The output trace and connector loss were not deembedded for these measurements.

Figure 14. Gain vs. Frequency

Figure 15. Noise Figure vs. Frequency

Figure 16. Input IP3 vs. Frequency

Figure 17. Input P1dB vs. Frequency

PERFORMANCE UP TO 26.5 GHz

This section provides the test results at a higher frequency from 23.2 GHz to 26.5 GHz. Differential outputs are measured here. Traces, hybrids, and connector losses were deembedded for all measurements except output return loss. It is important to note that this performance is typical and not guaranteed.

EVALUATION BOARD

The [ADL5726-EVALZ](#) comes with an [ADL5726](#) chip. It supports a single 5 V supply for ease of use. For 5 V operation, the 3.3 V and 1.8 V test loops are for evaluation purposes only. When using a 3.3 V or 1.8 V supply, remove the R1 and R2 resistors from the evaluation board. Figure 25 shows the [ADL5726-EVALZ](#) lab bench setup.

INITIAL SETUP

To set up the [ADL5726-EVALZ](#), take the following steps:

1. Power up the [ADL5726-EVALZ](#) with a 5 V dc supply. The supply current of the evaluation board is approximately 90 mA, which is a combination of the VCC1 (1.8 V) and the VCC2 (3.3 V) currents.
2. Connect the signal generator to the input of the [ADL5726-EVALZ](#).
3. Connect RFOP and RFON to a 180° hybrid that works within the 21.2 GHz to 23.6 GHz frequency range.
4. Connect the difference output of the hybrid to the spectrum analyzer. The sum port of the hybrid must be terminated to 50 Ω.

See Figure 25 for the [ADL5726-EVALZ](#) lab bench setup.

RESULTS

Figure 24 shows the expected results when testing the [ADL5726-EVALZ](#) using the Rev. A version of the evaluation board and its software. Note that future iterations of the software may produce different results. See the [ADL5726](#) product page for the most recent software version.

Figure 24 shows the results of the differential output for an input of 21.2 GHz at -15 dBm. The hybrid and board loss have not been deembedded.

Table 6. Evaluation Board Configuration Options

Component	Function	Default Condition
3P3V, 1P8V, GND, 5V	Power supplies and ground.	Not applicable
RFIN, 572X_RFOP, 572x_RFON	Input, output, and data.	Not applicable
RBIAS	442 Ω for RBIAS.	RBIAS = 442 Ω (0402)
R1, R2	1.8 V and 3.3 V regulator connections.	R1, R2 = 0 Ω (0402)
R3	Do not install (DNI).	R3 = DNI (0402)
R4	Pull-up or pull-down resistor.	R4 = 10 kΩ (0402)
C1 to C12	The capacitors provide the required decoupling for the supply related pins.	C1, C4 = 4.7 nF (0402), C2, C3 = 33 pF (0402), C5, C6 = 0.1 μF (0402), C7, C9, C10, C12 = 4.7 μF (0603), C8, C11 = 1000 pF (0603)
P1	Jumper to change bands, 2-pin jumper.	Not applicable
U1	ADM7170ACPZ-1.8 1.8 V regulator.	Not applicable
U2	ADM7172ACPZ-3.3 3.3 V regulator.	Not applicable
DUTA	ADL5726 device under test (DUT).	Not applicable
