DESCRIPTION

Having a 3D printer without filament is sort of like having a regular printer without paper or ink. And while a lot of printers come with some filament there's a good chance you've been printing up a storm and need something new. That's why we've started carrying a complete line of 3D printing filament in a variety of colors!

This **PLA 1.75mm Green 1Kg spool** is a great basic material for 3D printers. 1.75MM diameter, PLA filament works best with [PrintrBot Simples](#).

It's always a good idea to check what diameter and filament type your printers can handle before purchasing!

PLA is bioplastic so its made from renewable natural resources. It's biodegradable in commerial compost facilities so you can feel good and green about whatever you're printing. There's less warping when printing with PLA and it works best when extruded between 160°C and 220°C.

[For those of you who want more information on the different types of 3D printing material, there's a great tutorial on our Learn System!](#)
