<sup>\*</sup>MSL level dependent on product remaining in sealed packaging until use

#### **Measurement Method**

## **Measurement Interface Circuit**

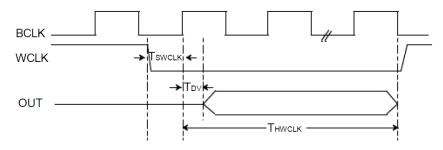

Interface diagram between I2S Master and 2 Microphones

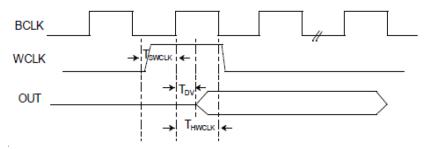

### **Digital Interface Specifications**

In order to properly use this microphone, the I2S converter must support a 32-bit word size for mono operation and 64-bit word size for stereo operation with two microphones. Each microphone outputs 24-bit data with 18-bit precision. Six bits are null (0) value.

| Parameters      | Symbol | Condition      | Value          |         | Units  |     |
|-----------------|--------|----------------|----------------|---------|--------|-----|
|                 | -      |                | MIN            | Typical | MAX    | -   |
| BCLK Frequency  | BCLK   | -              | -              | 3.072   | 12.288 | MHz |
| BCLK Duty Cycle | -      | -              | 45             | -       | 55     | %   |
| Data Valid      | TDV    | -              | -              | -       | 18     | nS  |
| WCLK Hold Time  | THWCLK | Two mic mode   | 32<br>(1/BCLK) | -       | 1      | nS  |
|                 |        | Array mic mode | 20             | -       | -      | nS  |
| WCLK Setup Time | TSWCLK | -              | 20             | -       | -      | nS  |

## Typical Frequency Response (Microphone spaced 50cm from 94 dB acoustic source)

### **Recommended Soldering Procedure**

Important Notes to minimize device damage:

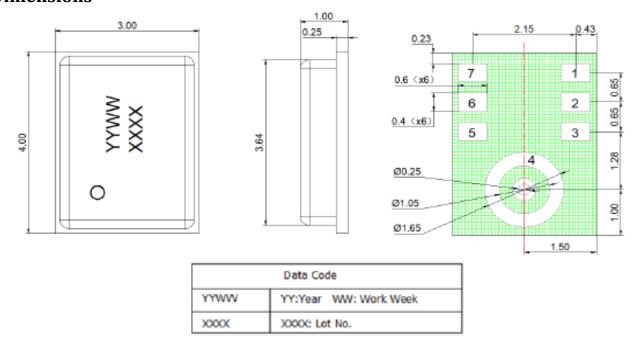

- 1. Do not boards wash or clean after the reflow process.
- 2. Do not apply over 0.3Mpa of air pressure into the port hole.
- 3. Do not expose to ultrasonic processing or cleaning.
- 4. Do not pull a vacuum over port hole of the microphone.

**Reliability Testing** 

| Type of Test                         | Test Specifications  |
|--------------------------------------|--|
| Simulated Reflow<br>(Without Solder) | Samples for qualification testing require 3 passes 260±5 °C reflow solder profiles. 2 hours of setting time is required between each reflow profile test.  |
| Static Humidity                      | Precondition at +25°C for 1 hour. Expose to +85°C with 85% relative humidity for 1000 hours. Dry at room ambient for 3±1 hour before taking final measurement.   |
| Temperature Shock                    | Each cycle shall consist of 30 minutes at -40°C, 30 minutes at +125°C with 5 minutes transition time. Test duration is for 30 cycles, starting from cold to hot temperature.                                   |
| ESD Sensitivity                      | Perform ESD sensitivity threshold measurements for each contact according to MIL-STD-883G, Method 3015.7 for Human Body Model. Identify the ESD threshold levels indicating passage of 8000V Human Body Model. |
| Vibration Test                       | Vibrate randomly along three perpendicular directions for 30 minutes in each direction, 4 cycles from 20~2000 Hz with a peak acceleration of 20 Gs.  |
| Shock Test                           | Subject samples to half-sine shock pulses (3000±15% Gs for 0.3ms) in each direction, for a total of 18 shocks.   |
| Drop Test                            | Drop samples from 1.5m height onto a steel surface, total 18 times and inspected for mechanical damage.  |
| Operation Life                       | Subject samples to +125°C for 168 hours under full maximum rated voltage.  |

Microphone frequency response and sensitivity shall not deviate more than ±3 dB.

#### **Dimensions**

| Item              | Dimension | Tolerance(+/-) | Units |
|-------------------|-----------|----------------|-------|
| Length(L)         | 4.00      | 0.10           | mm    |
| Width(W)          | 3.00      | 0.10           | mm    |
| Height(H)         | 1.00      | 0.10           | mm    |
| Acoustic Port(AP) | Ø0.25     | 0.05           | mm    |

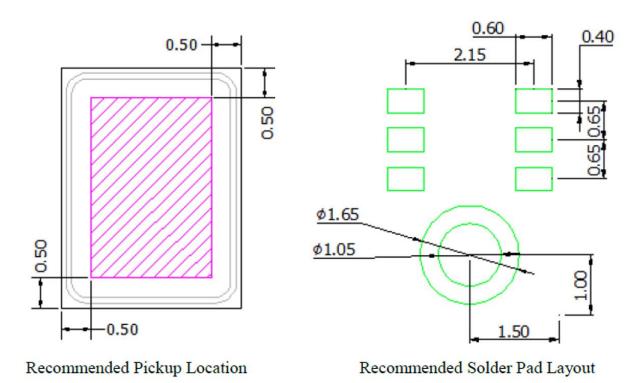

|       | ,        |            |  |  |
|-------|----------|------------|--|--|
| Pin # | Pin Name | Type       | Description  |  |
| 1     | LR       | Input      | Left/Right channel select. When set low, the microphone outputs its signal in the left channel of the I <sup>2</sup> S frame. When set high, the microphone outputs its signal in the right channel.   |  |
| 2     | CONFIG   | Input      | Pull to ground. The state of this pin is used at power-up.   |  |
| 3     | VDD      | Power      | Power, 1.62 to 3.63 V. This pin should be decoupled to GND with a 0.1µF capacitor.   |  |
| 4     | GND      | Groun<br>d | Ground. Connect to ground on the PCB.  |  |
| 5     | WS       | Input      | Serial Data-Word Select for I2S Interface  |  |
| 6     | SCK      | Input      | Serial Data Clock for I2S Interface  |  |
| 7     | SD       | Output     | Serial Data Output for I <sup>2</sup> S Interface. This pin tri-states when not actively driving the appropriate output channel. The SD trace should have a 100 kΩ pull down resistor to discharge the line during the time that all microphones on the bus have tri-stated their outputs. |  |

Notes:

All dimensions are in millimeter (mm).

Tolerance±0.15mm unless otherwise specified.
