

ON Semiconductor®

FDN360P

Single P-Channel, PowerTrench⁰ MOSFET

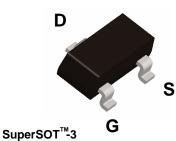

General Description

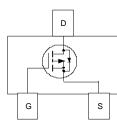

This P-Channel Logic Level MOSFET is produced using ON Semiconductor advanced Power Trench process that has been especially tailored to minimize the on-state resistance and yet maintain low gate charge for superior switching performance.

These devices are well suited for low voltage and battery powered applications where low in-line power loss and fast switching are required.

Features

- -2 A, -30 V. $R_{DS(ON)} = 80 \text{ m}\Omega @ V_{GS} = -10 \text{ V}$ $R_{DS(ON)} = 125 \text{ m}\Omega @ V_{GS} = -4.5 \text{ V}$
- Low gate charge (6.2 nC typical)
- High performance trench technology for extremely low $R_{\text{DS}(\text{ON})}$.
- High power version of industry Standard SOT-23 package. Identical pin-out to SOT-23 with 30% higher power handling capability.
- These Devices are Pb-Free and are RoHS Compliant

8mm

Absolute Maximum Ratings T_A=25°C unless otherwise noted

R_{8JA} is the sum of the junction-to-case and case-to-ambient thermal resistance where the case thermal reference is defined as the solder mounting surface of the drain pins. R_{8JC} is guaranteed by design while R_{8CA} is determined by the user's board design.

, 6

a) 250°C/W when mounted on a 0.02 in² pad of 2 oz. copper.

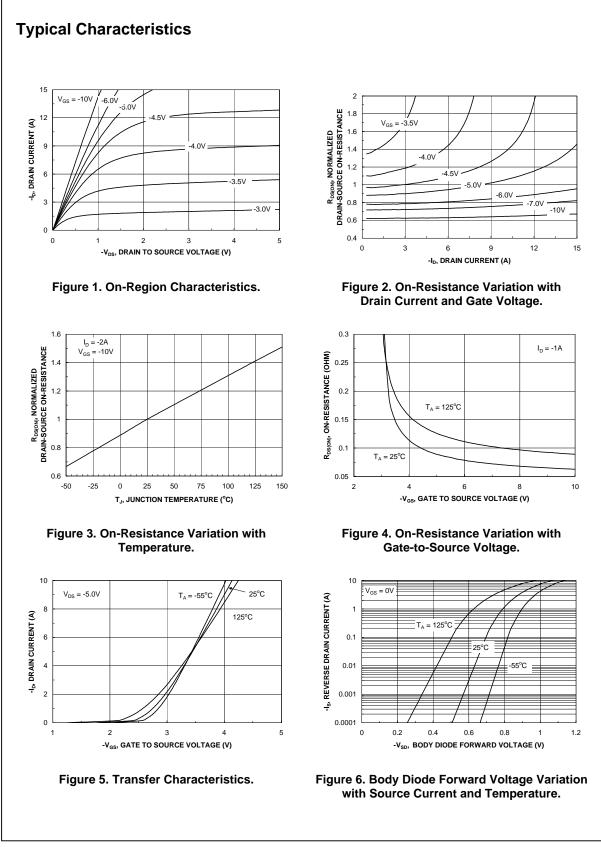

b) 270°C/W when mounted on a minimum pad.
