Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (_), the underscore (_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (_). Please check the ON Semiconductor website to verify the updated device numbers. 3.3V LVDS High Speed Differential Driver/Receiver

General Description

This driver and receiver pair are designed for high speed interconnects utilizing Low Voltage Differential Signaling (LVDS) technology. The driver translates LVTTL signals to LVDS levels with a typical differential output swing of 350mV and the receiver translates LVDS signals, with a typical differential input threshold of 100mV, into LVTTL levels. LVDS technology provides low EMI at ultra low power dissipation even at high frequencies. This device is ideal for high speed clock or data transfer.

Features

■ Greater than 400Mbs data rate
■ 3.3V power supply operation
■ 0.5ns maximum differential pulse skew
■ 2.5ns maximum propagation delay
■ Low power dissipation
■ Power-Off protection
■ 100mV receiver input sensitivity
■ Fail safe protection open-circuit, shorted and terminated conditions
■ Meets or exceeds the TIA/EIA-644 LVDS standard
■ Flow-through pinout simplifies PCB layout
■ 14-Lead SOIC and TSSOP packages save space
