

NB6N11S

3.3 V 1:2 AnyLevel™ Input to LVDS Fanout Buffer / Translator

Description

The NB6N11S is a differential 1:2 Clock or Data Receiver and will accept AnyLevel input signals: LVPECL, CML, LVCMOS, LVTTTL, or LVDS. These signals will be translated to LVDS and two identical copies of Clock or Data will be distributed, operating up to 2.0 GHz or 2.5 Gb/s, respectively. As such, the NB6N11S is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock or Data distribution applications.

The NB6N11S has a wide input common mode range from GND + 50 mV to V_{CC} - 50 mV. Combined with the 50 Ω internal termination resistors at the inputs, the NB6N11S is ideal for translating a variety of differential or single-ended Clock or Data signals to 350 mV typical LVDS output levels.

The NB6N11S is functionally equivalent to the EP11, LVEP11, SG11 or 7L11M devices and is offered in a small, 3 mm X 3 mm, 16-QFN package. Application notes, models, and support documentation are available at www.onsemi.com.

The NB6N11S is a member of the ECLinPS MAX™ family of high performance products.
